\* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the The humidity of the atmosphere is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean at the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 6th of April 1895.

					DISTRICT OBSERVATIONS.											District.
Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	OF WEEK.				RAINFALL.							
					Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	Since 1st of month.			Since 1st April 1895.				
									Mean for district.	Normal mean.	Variation.	Mean for district.	Normal mean.	Variation.

last ten years. The variations are *negatives* when the mean of the week is less than the corresponding normal mean, and *positives* when greater. Numbers denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal during the past ten years. The means of the district are the numerical average of the rainfall returned received in the district, i.e., from total rainfall at the subdivisions.

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 6th of April 1895.

# SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY THE 6TH OF APRIL 1895.

At the close of the previous week conditions over Bengal were fairly normal, and weather was generally fine and settled. On the 31st March, or the first day of the present week, the pressure changes were remarkably small and the general distribution was quite unaltered; temperature, however, had generally increased, though humidity was low and weather was fine, except for a very light shower at Gnatong. On the 1st of April pressure was increasing moderately, but temperature and humidity were falling. Weather had been slightly less settled than on the previous day, and a thunderstorm was reported from Narayan-ganj during which light rain fell. On the 2nd the changes in Bengal were again small and unimportant, but over North-Western India a large shallow barometric depression appeared, in which on the 3rd two centres of disturbance or depressions appeared over the Punjab, giving rise to unsettled weather over a large part of North-Western India. These were, however, on this day too far distant to affect Bengal, and weather again continued fine and settled except for light showers in East Bengal and a snow-storm at Gnatong. Temperatures had again risen on the 3rd, but the other changes were unimportant. On the 4th the depressions over the Punjab had practically filled up, and the area of lowest pressure accompanied by rather disturbed conditions was transferred to Bengal, where pressure fell rapidly, and the changes of temperature and humidity became decidedly variable, and where a good many local storms with rain were reported. Over North-Western India on this day a most remarkable fall of temperature occurred, and the day temperatures at some stations were about  $20^{\circ}$  below the normal. On the 5th the depression over Bengal began to pass away, and it was transferred in an easterly direction towards Burma, but from the 5th to the 6th the changes were small, and the depression still existed over Burma. Pressure was therefore generally rising slowly on these two days, but as conditions were still disturbed, a few local storms with rain continued to occur. The most noticeable change, however, was the spread of the wave of comparatively low temperature mentioned previously from North-Western India over Bengal, and hence temperature and humidity were becoming relatively low at the end of the week, while weather was again becoming fine and settled. Indeed the mean temperature of the northern and western half of the province was in defect on the 6th instant by amounts ranging up to  $5.2^{\circ}$  at Motihari.

**Pressure.**—The variations of the pressure from the normal have again not been large, and at the majority of stations slight excess amounts have been recorded. On the other hand, slightly defective pressures have been recorded at most of the stations in South-West and North Bengal. The variations, however, generally do not average more than about 0.01 inch to 0.015 inch.

**Temperature.**—The average mean temperature of the whole province for the week has been  $1^{\circ}$  above the normal, the excess being usually largest in Chota Nagpur and North Bengal, where it has equalled about  $2^{\circ}$ .

The actual temperatures registered during the week, and their variations from the normal temperature of the season, are clearly seen in the table below, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the same period:—

*Table showing the excess or defect of the actual mean temperature from the normal for the week ending Saturday, the 6th of April 1895.*

	Normal mean maximum temperature for the week ending 6th April.	Actual mean maximum temperature for the week ending 6th April 1895.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 6th April.	Actual mean minimum temperature for the week ending 6th April 1895.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 6th April.	Actual mean daily temperature for the week ending 6th April 1895.	Variation of actual mean from the normal.
Cuttack	101.3	98.6	-2.7	76.5	76.5	0	88.9	87.5	-1.4
Calcutta	95.4	95.4	-1.0	72.5	72.5	+1.0	84.0	85.1	+1.1
Chittagong	87.1	87.6	+0.5	70.5	72.3	+0.2	79.6	79.9	+0.3
Burdwan	99.9	99.5	-0.4	74.7	74.7	0.0	87.0	87.1	+0.1

Purnea	95.6	96.8	+1.2	66.5	66.5	0.0	81.1	81.2	+0.1
Hazaribagh	95.5	95.8	+0.3	70.3	72.4	+2.1	82.4	84.9	+2.5
Darjeeling	89.5	61.3	-28.2	45.6	46.9	+1.3	72.6	64.1	-8.5

**Rainfall.**—The average rainfall for the week in East Bengal has equalled 0.29 inch and in Orissa 0.12 inch, while South-West Bengal has received 0.06 inch. In the remaining divisions there has been practically no rain. In all divisions, therefore, rainfall continues in defect of the normal.

Calm 28.			

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 1.0° lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

C. LITTLE,

The mean pressure of the seven days ... .. 29.789 Inches.

The average pressure of the corresponding period for 24 years, Surveyor-General's Office ... .. 29.789

The total number of hours of bright sunshine ... .. 50.2 Hours.

The maximum possible number of hours of sunshine ... .. 86.6

The mean temperature of the seven days ... .. 84.0

The average temperature of the corresponding period for 24 years, Surveyor-General's Office ... .. 84.2

The extreme variation of temperature ... .. 23.2

The maximum temperature ... .. 98.8

The highest velocity of the wind in one hour ... .. 16 Miles.

The mean relative humidity ... .. 72

The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office ... .. 67

The total fall of rain from 31st March to 6th April 1895 ... .. 0.07 Inches.

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. 0.34

The total fall from 1st January to 6th April 1895 ... .. 0.27

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. 3.11

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; t, thunder <, lightning.

\* There are no separate leases for sugarcane on the Sone Canals. All leased fields of that crop now come under one of the other heads.

CALCUTTA,

The 9th April 1895.

O. C. LIVES,  
 Under-Secy. to the Govt. of Bengal.

*Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 and 1892.*

The Council met at the Council Chamber on Saturday, the 23rd March, 1895.

### Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding*.

The HON'BLE SIR CHARLES PAUL, K.C.I.E., *Advocate-General*.

The HON'BLE H. J. S. COTTON, C.S.I.

The HON'BLE SIR JOHN LAMBERT, K.C.I.E.

The HON'BLE D. R. LYALL, C.S.I.

The HON'BLE J. A. BOURDILLON.

The HON'BLE MAULVI ABDUL JUBBAR KHAN BAHADUR.

The HON'BLE F. R. S. COLLIER.

The HON'BLE C. E. BUCKLAND.

The HON'BLE T. D. BEIGHTON.

The HON'BLE ROMESH CHUNDER DUTT, C.I.E.

The HON'BLE SURENDRANATH BANERJEE.

The HON'BLE L. GHOSE.

The HON'BLE MAHARAJA SIR LUCHMESSUR SINGH BAHADUR, K.C.I.E., of DARBHANGA.

The HON'BLE MAULVI SERAJUL ISLAM KHAN BAHADUR.

The HON'BLE W. C. BONNERJEE.

The HON'BLE J. G. WOMACK.

The HON'BLE MAULVI MUHAMMAD YUSUF KHAN BAHADUR.

The HON'BLE C. E. SMYTH.

## NEW MEMBERS.

The Hon'ble MESSRS. BEIGHTON and SMYTH took their seats in Council.

## LICENSES FOR ARMS.

The Hon'ble BABU SURENDRANATH BANERJEE asked :—

Whether the attention of the Government has been called to a statement which has appeared in the newspapers to the effect that the licenses for arms which are being issued by the Magistrate of Dacca permit the carrying of arms only within the limits of the town or village where the holder of the license may happen to live? Whether it is true that it has hitherto been the practice at Dacca to grant licenses for the carrying of arms throughout the whole district, and with the authorization of the Commissioner throughout the whole Division? Will the Government be pleased to state why it has been found necessary to depart from the practice of previous years; and having regard to the complaints which the new orders have given rise to, will the Government be pleased to direct that the practice of the former years be followed; and that the license should authorize the carrying of arms throughout the whole district, or with the consent of the Commissioner throughout the whole Division?

The Hon'ble MR. COTTON replied :—

“The question of the Hon'ble Member has been transmitted to the Commissioner of the Dacca Division, with a request that he will report upon the facts of the case.”

## INSUFFICIENCY OF MUNSIFFS.

The Hon'ble BABU SURENDRANATH BANERJEE asked :—

Is the Government aware that Munsifs through want of time and pressure of work have to put off from day to day the hearing and final disposal of many cases, and that parties and witnesses have to be in attendance in Court from day to day at great sacrifice and inconvenience to all concerned? Whether this state of things is not due to the insufficient number of subordinate Judicial Officers and to the circumstance that Munsifs have more work thrown upon them than they can cope with? If so, will the Government be pleased to add to the number of Munsifs?

Will the Government state the number of Munsifs employed in those Provinces in 1892-93, 1893-94 and 1894-95, the number of suits instituted before them, and the number disposed of by them in 1892-93, 1893-94, and the nine months of 1894-95?

The Hon'ble MR. COTTON replied :—

“The Lieutenant-Governor is afraid that the postponement of cases is too common in the Civil Courts, but he does not believe that the delay in the disposal of cases is due to any material extent to insufficiency in the number of Munsifs' Courts, since the number of cases disposed keeps fairly even with the number of cases instituted. His attention and that of the High Court have been directed to the abatement of the tendency and to the measures which should be taken to ensure the efficient performance of the work of the Courts. The High Court have recently added to the Register of Civil Suits a column showing the date of each adjournment, such as has always been done in criminal registers, so as to attract the eye of the District Judge or other inspecting officer to cases where postponements have been abnormally numerous and where enquiry is *primâ facie* called for. Moreover, the High Court have recently recommended, and the Lieutenant-Governor has sanctioned, the grant of Small Cause Court powers on an extended scale, so as to enable the Munsifs to deal with their cases expeditiously.

“Statistics of civil work are compiled by the calendar year. The following figures which have been extracted from the reports of the High Court on the

administration of civil justice give the information desired by the Hon'ble Member:—

1	2	3		4		5	6
YEAR.	Number of Munsifs.	ORIGINAL SUITS DISPOSED OF UNDER ORDINARY PROCEDURE.		ORIGINAL SUITS DISPOSED OF UNDER SMALL CAUSE COURT PROCEDURE.		Total.	Average number of cases disposed of per Munsif.
		Contested.	Uncontested.	Contested.	Uncontested.		
1890	262	77,060	244,673	11,168	74,908	407,809	1,556
1891	275	76,815	252,339	12,660	91,075	432,889	1,574
1892	285	84,729	267,647	18,988	137,804	509,168	1,786
1893	289	82,170	268,210	21,610	151,835	523,825	1,812

"From this statement it will be seen that there has been a steady progressive improvement in the number of cases disposed of by each Munsif, and therefore presumably less delay in the disposal of cases. It will also be observed that a considerable increase in the number of Munsifs has been made during the past four years; a further increase in their numbers was sanctioned during the year 1894, and this, together with the enlargement of their summary powers, will, it is hoped, enable them to keep the work under."

#### THE BENGAL PROVINCIAL SERVICE BUDGET FOR 1895-96.

The Hon'ble Mr. BOURMILLON laid on the table the Bengal Provincial Service Budget for 1895-96. He said:—

"With your Honour's permission I will follow the precedent of last year, and, instead of reading the statistical document in my hands, will lay it on the table for the perusal of hon'ble members and for publication. I will ask the members of this Council, after considering it, to submit, as soon as possible, any questions that they may desire to put in order that the answers may be given at the next sitting of the Council. I am sure hon'ble members will recognise that it is obviously desirable that this should be done in order that the Secretary who prepared this budget may be able to reply to any questions which may be put in regard to it, instead of this task being left to his successor."

#### EXPLANATORY NOTE ON THE BENGAL PROVINCIAL SERVICE BUDGET FOR 1895-96.

"This is the third occasion on which the Financial Statement for the Province of Bengal has been presented before this Council. On both previous occasions the system of Provincial Finance and the financial relations of the Supreme Government with that of Bengal were explained at some length. No change has been introduced during the past year in the arrangements described a year ago, and since many members of this Council were present at the Budget debate of 1894, while for the remainder the necessary information is available in the proceedings of this Council, I do not consider it necessary again to trace the history or expound the system of Provincial Finance."

"2. Following the procedure adopted last year, I propose to divide my remarks into two parts—of which the first will deal with (1) the closed accounts of 1893-94, (2) the revised estimate for 1894-95, and (3) the budget estimate for 1895-96; while the second will treat in greater detail of the Budget of 1895-96."

##### (1) CLOSED ACCOUNTS OF 1893-94.

"3. In the Financial Statement which was laid before the Council on 31st March 1894, it was assumed that the year 1893-94 had opened with a credit

balance of Rs. 22,55,000, and had closed with a credit balance of Rs. 29,87,000; that the total amount available for expenditure during the year was Rs. 4,56,65,000, and that out of this sum Rs. 4,26,78,000 had been spent. The actual result as ascertained from the closed accounts proves to have been worse than this estimate by Rs. 3,63,000. The actual amount available for expenditure was Rs. 4,55,33,000, and the amount actually expended Rs. 4,29,09,000, so that the closing credit balance was Rs. 26,24,000 instead of Rs. 29,87,000. This reduction was caused by the actual receipts being less than the estimate by Rs. 1,32,000, while at the same time the expenditure exceeded the estimate by Rs. 2,31,000.

"4. The chief causes which led to the diminution of receipts were (1) the payment of about half-a-lakh to the Government of the North-Western Provinces and Oudh as compensation for the loss sustained by that Government owing to orders forbidding the importation of Shahjehanpur rum into Bengal except under bond; (2) a falling off of a lakh in the sale-proceeds of jail manufactures owing to smaller supplies to the Military and Opium Departments; (3) railway receipts being Rs. 90,000 below the estimate; and (4) a falling off of Rs. 20,000 in registration receipts owing to the reduction of the *ad-valorem* fee on documents not exceeding Rs. 50 in value from twelve annas to eight annas. Against these decreases there was an increase of about a lakh and three quarters under Irrigation Major Works owing to larger traffic on the Orissa Canals, and to the recovery of old outstandings on the Midnapore Canals, as well as improvements under other heads.

"5. The increase of expenditure was chiefly under the heads of Land Revenue (Rs. 42,000); and Salaries and expenses of the Civil Department, specially under Courts of Law (Rs. 60,000), Jails (Rs. 45,000), Police (Rs. 43,000), Marine (Rs. 26,000), Education (Rs. 27,000), Medical (Rs. 14,000), and Scientific and other Minor Departments (Rs. 29,000). The increase under Jails was caused by the high prices of food-grains, and that under the head of Scientific and other Departments is attributable to the payment of the first instalment (Rs. 50,000) of the price of the Nimbong Cinchona Plantation. There was also an increase of Rs. 50,000 under Miscellaneous, due partly to a special adjustment of Rs. 31,000 paid to the descendants of Khajeh Amir Shahid of Burdwan on account of arrear charges for the maintenance of his tomb, and partly to a refund of percentage charges for treasury establishments levied in excess from District and Road Funds. Against these increases there was a saving of Rs. 1,46,000 under Stationery and Printing, due to a more careful scrutiny of expenditure enforced under the orders of the Lieutenant-Governor.

"6. The actual net result was a surplus of receipts over expenditure, amounting to Rs. 3,69,000 only, against one of Rs. 7,32,000 anticipated when the revised estimate for the year was passed.

#### (2) REVISED ESTIMATE FOR 1894-95.

"7. The budget estimate for 1894-95, as adopted by the Government of India, assumed that the year would open with a credit balance of Rs. 29,87,000, that the total revenue would amount to Rs. 4,28,28,000, and the total expenditure to Rs. 4,35,98,000, so that the year would close with a balance of Rs. 22,17,000. The latest estimate available for the accounts of the year shows that the total receipts have been Rs. 4,42,97,000, which is better than was originally expected by Rs. 14,69,000, and that the expenditure has been Rs. 4,35,48,000, which gives a decrease of Rs. 50,000: the two together give a net betterment of Rs. 15,19,000, but there was a falling off of Rs. 3,63,000 in the expected amount of the opening balance.

"8. The large increase of revenue in the revised as compared with the original estimate is mainly attributable to a sudden advance under Railways of Rs. 9,50,000 earned by the Eastern Bengal Railway chiefly in carrying jute. There was also a considerable increase under Stamps (Rs. 4,87,000), Excise (Rs. 1,12,000), Assessed Taxes (Rs. 1,00,000), Miscellaneous (Rs. 1,22,000), and Civil Works (Rs. 1,12,000), all of which figures denote a year of general prosperity. Smaller advances also appear under Salt (Rs. 40,000) and Land Revenue (Rs. 38,000). On the other hand against these

increases decreases are anticipated under the heads of Jails (Rs. 1,75,000), caused by smaller demands for articles manufactured by the prisoners, Irrigation receipts (Rs. 88,000), Registration (Rs. 45,000), and Courts of Law (Rs. 44,000). The net result of these variations from the budget of 1894-95 is an increase in the closing balance of Rs. 11,56,000, from Rs. 22,17,000 to Rs. 33,73,000, almost the whole of which is due to the unexpected increase in railway receipts.

### (3) BUDGET ESTIMATE FOR 1895-96.

"9. The Budget Estimate for 1895-96, as finally passed by the Government of India, accepts Rs. 33,73,000 as the opening balance, and contemplates receipts aggregating Rs. 4,41,97,000 and expenditure Rs. 4,43,08,00, leaving a closing balance of Rs. 32,62,000.

"10. It is estimated that on the whole the receipts, though Rs. 13,69,000 better than the budget of 1894-95, will be 1 lakh less than the revised estimate of the same year. The chief fluctuations compared with the revised estimate for 1894-95, are (1) an increased grant of one lakh from Imperial Funds for Customs establishment, (2) an increased grant of Rs. 59,000 for the Hidgili Tidal Canal, and (3) an increase of Rs. 90,000 in Jail receipts. To these direct increases should be added the sum of 3 lakhs, which, though levied by the Government of India in 1894-95 as a contribution from Provincial to Imperial Funds, will not be taken again in 1895-96: as the adjustment has been made under the Land Revenue head, it has been found convenient to treat the sum in 1895-96 not as a reduction of expenditure, but as an item of increased receipts. The items of increase thus aggregate Rs. 5,49,000. Against these it has been considered wise to budget for a decrease of Rs. 6,50,000 in receipts from Railways, since it is improbable that they will be so remunerative again. Thus the result, as already stated, is a decrease of 1 lakh in anticipated revenue.

"11. On the expenditure side the total grant exceeds the revised estimate of 1894-95\* by Rs. 7,60,000. A part of this extra expenditure (Rs. 2,18,000 according to figures supplied by the Accountant-General) is debitable to the payment of exchange compensation, but the advance of Police expenditure by Rs. 1,06,000 over the revised figures of the present year includes also a large proposed expenditure of about a lakh in carrying out some of the recommendations of the Police Commission. The head of Customs shows an increase of Rs. 80,000 required to meet the pay of the additional establishment necessitated by the reimposition of duties on cotton goods and yarns. The estimated expenditure under Jails also shows an increase of nearly a lakh, chiefly in the cost of raw materials. The grants for Public Works have been raised by Rs. 2,34,000, while the estimate for Stationery and Printing has been reduced by nearly a lakh in pursuance of the economies inaugurated by the Lieutenant-Governor in a previous year.

"12. The net result is as follows. The total estimated revenue of the year, together with the opening balance, is Rs. 4,75,70,000. On the other hand, the sanctioned grant for expenditure in 1895-96 is Rs. 4,43,08,000 compared with Rs. 4,35,48,000, the revised estimate of 1894-95, and Rs. 4,35,98,000, the budget estimate of the same year; the closing balance is estimated at Rs. 32,62,000 as compared with Rs. 33,73,000 at the end of 1894-95, and Rs. 26,24,000 at the end of 1893-94.

## PART II.

### DETAILED REMARKS ON THE BUDGET FOR 1895-96.

#### RECEIPTS.

"13. *Land Revenue.*—Little variation is possible in these figures. The average receipts during each of the past five years have been Rs. 3,87,17,000. The actuals in 1893-94 were Rs. 3,87,06,000, and the estimate for 1895-96 has been placed at Rs. 3,87,00,000. The 12 per cent. on collections from Government estates for 1895-96 have been estimated at Rs. 4,77,000 against Rs. 4,75,000, the budget estimate for 1894-95 and the actuals of 1893-94 amounting to Rs. 4,78,505. Transactions of account between the Imperial and Provincial

Funds are, for the sake of convenience, adjusted under the head of Land Revenue, and the details of the calculations for 1895-96 are given below:—

	Estimate, 1895-96. Rs.
Fixed contribution to Imperial Revenue under the terms of the Provincial contract ... ..	14,39,000
<i>Add</i> (payable to the Imperial Funds)—	
(a) Interest on the advance for the Hidgellée Tidal Canal ...	26,000
Total to be deducted from the Provincial share ...	14,65,000
<i>Deduct</i> (to be received from Imperial Funds)—	
(b) Advance for the remodelling of the Hidgellée Tidal Canal ... ..	1,65,000
(c) Grant on account of Imperial buildings placed under local bodies ... ..	10,000
(d) Compensation for loss sustained by the Provincial Revenues on account of the reservation of the Western Duars for the Khedda Department ...	18,000
(e) Grant for the additional establishment entertained in the Calcutta Custom House on the introduction of the new Tariff Acts ...	2,61,000
(f) Assignment for the Gnatong police guard ...	16,000
Total to be added to the Provincial share ...	4,73,000
Net sum to be transferred to Imperial Funds out of the Provincial share (one-fourth) ...	9,92,000

“14. The estimated Provincial share of Land Revenue is arrived at as follows:—

HEADS.	FIGURES PASSED BY GOVERNMENT.	
	Revised estimate, 1894-95. Rs.	Estimate, 1895-96. Rs.
Gross Land Revenue ... ..	3,86,50,000	3,87,00,000
Deduct 12 per cent. on estimated collections from Government estates ...	4,75,000	4,77,000
Net amount divisible between Imperial and Provincial Funds ... ..	3,81,75,000	3,82,23,000
Provincial share of above (one-fourth) ...	95,44,000	95,56,000
Deduct on account of adjustments ...	14,60,000	9,92,000
Net ...	80,84,000	85,64,000
Add 12 per cent. collections ...	4,75,000	4,77,000
Total Provincial share ... ..	85,59,000	90,41,000

The above estimate does not include any provision for “Recoveries on account of the cost of Bihar Survey and Settlements.” It is anticipated that Rs. 1,50,000 will be recovered in 1895-96, but this will be added to the Imperial share of Land Revenue.

“15. *Stamps*.—The budget estimate of total receipts in 1894-95 was Rs. 1,00,50,000. In view of the steady increase that has occurred in this branch of revenue during the last six years, averaging  $4\frac{1}{4}$  lakhs per annum, both the revised estimate for 1894-95 and the estimate for 1895-96 have been placed at Rs. 1,67,00,000. The Provincial share is three-fourths of this sum and amounts to Rs. 1,25,25,000, which is an advance of Rs. 4,87,000 on the budget estimate of 1894-95.

"16. *Excise*.—The progressive increase of Excise revenue since 1890-91 has been as follows, giving an average annual advance of Rs. 5,61,000 :—

			Rs.	Increase over preceding year. Rs.
1890-91	...	...	1,04,65,000	.....
1891-92	...	...	1,11,34,000	6,69,000
1892-93	...	...	1,15,91,000	4,60,000
1893-94	...	...	1,21,48,000	5,54,000

In the Resolution on the administration of the Excise in Bengal during 1893-94, the Lieutenant Governor pointed out that revenue had increased at a higher ratio than consumption in regard to the three important heads of Country Rum, Opium and Ganja, while the increase in the consumption of distillery liquor exceeded that of revenue chiefly in Bihar, where duty was intentionally reduced and revenue surrendered in order to check illicit distillation. In view of the steady increase above recorded and of the general prosperity which the good crops of 1894-95 may be expected to induce, the estimate for 1895-96 has been placed at Rs. 1,27,00,000. The Provincial share is one-fourth, and amounts to Rs. 31,75,000, which is a lakh and a half higher than the budget estimate of the current year.

"17. *Provincial Rates*.—The budget estimate of total revenue from Provincial Rates for 1895-96 amounts to Rs. 42,81,000, or Rs 3,79,000 less than the budget estimate of the previous year. The decrease is chiefly nominal, and is due to the fact that, owing to a change in the mode of adjusting the cost, no credit has been taken in the Provincial accounts for "Recoveries of the proportionate cost of establishment for collecting Road Cess." The amount will now be debited direct to the District Funds in the Local Funds Budget instead of being passed through both sides of the Provincial accounts.

"18. *Assessed Taxes*.—The budget estimate of total revenue from Assessed Taxes for 1894-95 amounts to Rs. 43,00,000. The actual receipts in 1893-94 were Rs. 43,50,479, and the collections in the first ten months of the current year show an increase of Rs. 1,12,000 as compared with those of the corresponding period of last year. The increase is attributable partly to better assessments, and partly to prompter payments, which latter cause would lead to an expectation of smaller receipts during the remainder of the year; but, looking to the steady growth of revenue under this head from year to year, the revised estimate for 1894-95 and the estimate for 1895-96 have each been placed at Rs. 45,00,000. The Provincial share is one-half and amounts to Rs. 22,50,000, which is one lakh better than the budget of 1894-95.

"19. *Forests*.—The total receipts of the Forest Department are estimated at Rs. 8,10,000 against Rs. 8,02,000, the actuals of 1893-94, and Rs. 8,00,000, the revised estimate of 1894-95. The Government of India have recently proposed certain relaxations of the restrictions hitherto imposed upon the grazing of cattle in Government forests, and the Inspector-General of Forests has been requested to suggest the best method of giving effect to the principles now laid down for adoption. It is possible that some reduction of income may ensue, but pending receipt of further information, the estimate of total receipts for 1895-96 has been retained at Rs. 8,10,000. One-half is Provincial.

"20. *Registration*.—The actual receipts of 1893-94 amounted to Rs. 13,89,000 in round numbers and the Budget Estimate of 1894-95 was Rs. 14,50,000. The small amount of the receipts in 1893-94 has been attributed chiefly to the orders reducing the minimum *ad valorem* fee for registration from annas 12 to annas 8, which took effect from the 1st July 1893. These orders are still in force, and will continue to affect the receipts during 1894-95; but as the reduction of the fee did not prevent an increase of 50,182 in the number of registrations in 1893-94, and a further increase is anticipated during 1894-95, the revised estimate for the current year has been placed at Rs. 13,60,000, and for 1895-96 the estimate has been raised to Rs. 14,00,000. One-half of these receipts is Provincial.

"21. *Jails*.—The budget estimate for 1894-95 was fixed at Rs. 9,55,000. In view of smaller receipts from cash sales of manufactured articles and from supplies to Departments, and the actuals of the twelve months ending 31st December 1894, amounting to Rs. 7,45,000, the revised estimate has been reduced to Rs. 7,80,000. On the average of past actuals, the estimate for 1895-96 has been placed at Rs. 8,70,000.

"22. *Marine*.—The revised estimate, based on actuals of the earlier months of the current year, has been placed at Rs. 9,45,000 against Rs. 9,34,000, the actuals of 1893-94. In view of the fact that the imposition of import duties on cotton goods may possibly prevent any further increase in the trade of the Port of Calcutta, the estimate for next year has been placed at Rs. 9,40,000.

"23. *Scientific and other Minor Departments*.—The total receipts for next year are estimated at Rs. 1,99,000 against Rs. 1,85,000 the revised, and Rs. 1,74,000 the budget estimate for 1894-95. The increase is expected chiefly from larger sales of quinine and from a new item, viz. "Veterinary receipts."

"24. *Miscellaneous*.—The receipts under this head are essentially fluctuating and difficult to forecast, and the estimate for next year has been placed at Rs. 8,62,000 with reference to the average actuals of past years, although it is much below Rs. 9,35,000, the revised estimate of 1894-95.

"25. *Railways*.—Under the terms of the Provincial Contract the Local Government has been relieved of all responsibility in the matter of Railway administration, though the Province receives half the net earnings of the Eastern Bengal State Railway. The Government of India estimate the Provincial share of these receipts for 1894-95 at Rs. 43,00,000, against Rs. 33,50,000 anticipated when the budget was originally passed. The increase is attributable to a large extent to increased receipts for carrying a heavy jute crop. For next year the estimate has been placed at Rs. 36,50,000, for although the Eastern Bengal Railway is doubtless an improving property, it would be unsafe to expect the recurrence of a third year of such high profits as the present and the past.

#### EXPENDITURE.

"26. *Land Revenue*.—The total Provincial expenditure under this head in 1893-94 was Rs. 35,30,000, and in consideration of the actuals in the first eight months of the current year, the revised estimate for 1894-95 has been placed at Rs. 36,00,000. The estimate of expenditure for next year has been fixed at Rs. 36,88,000, which includes a grant of Rs. 50,000 for agricultural improvements in Government estates, an item which has hitherto been debited to Irrigation—Minor works. As compared with the budget grant for 1894-95, there is an increase of Rs. 1,15,000 under "Charges of District Administration," which is due (a) to a larger provision of Rs. 60,000 for exchange compensation allowance, (b) to increased provision for clerks who are required in the Certificate Department (Rs. 10,000), (c) to increased provision under Partition establishment necessitated by an increase of work in that Department (Rs. 6,000), and (d) to an increased grant for the survey of waste lands in Jalpaiguri (Rs. 18,000). The advance of Rs. 10,000 under "Land Records and Agriculture" is chiefly due to the provision of Rs. 3,000 for the local allowance to the Director of Land Records and Agriculture, sanctioned by the Secretary of State, and also for increased provision under Establishment and Contingencies, with reference to past actuals.

"27. *Salt*.—The estimated expenditure in 1894-95 was Rs. 33,000. In consequence of the large importations of salt during the current year, it has been necessary to make additional grants (1) for extra establishment, (2) for structural alterations in the salt warehouses, and (3) for the hire of extra accommodation required at the Kidderpore Docks; and in view of these facts, the revised estimate for 1894-95 has been placed at Rs. 40,000. The total expenditure for 1895-96 is estimated at Rs. 36,000, as it will probably not be necessary to incur again construction charges such as those referred to above.

"28. *Stamps*.—The actual expenditure of 1893-94 was Rs. 6,32,000, and the budget estimate of 1894-95 was Rs. 6,82,000, the revised falling to Rs. 6,73,000. The estimate of total expenditure for 1895-96 amounts to Rs. 6,95,000, which is expected to be Rs. 22,000 higher than the revised estimate of the current year. The increase is chiefly in the cost of "Stamp Paper supplied from Central Stores." This increase is a necessary complement of the more extensive use of stamps and of the consequent increase in receipts, as it is caused by the larger supplies of paper taken out in order to be impressed with stamps, and also to be sold for use with adhesive stamps. The Provincial share is three-fourths or Rs. 5,22,000.

"29. *Excise*.—The variations under this head are extremely small, the estimated expenditure in a total of Rs. 1,66,000 being only Rs. 6,000 higher than the revised estimate of 1894-95.

"30. *Provincial Rates.*—As compared with the budget estimate of 1894-95, there is a great apparent decrease in the revised estimate of 1894-95 and the budget of 1895-96 of Rs. 3,22,000 and Rs. 3,11,000 respectively, which is due to a change in the mode of adjusting the cost of charges for the collection of cesses and the valuation and revaluation of estates, as has already been explained.

"31. *Customs.*—Almost the whole of the expenditure under this head is incurred in Calcutta. The increase in these charges, amounting in the revised estimate for 1894-95 to Rs. 1,95,350 above the figures of the budget estimate, and in the budget for 1895-96 to another Rs. 79,140, is due to the cost of additional establishment, the entertainment of which is necessitated by the passing of the Tariff Acts VIII and XVI of 1894. The provision is at present tentative only, as the Supreme Government has not yet formally accepted the proposals of the Lieutenant-Governor.

"32. *Assessed Taxes.*—The total expenditure of the Income-tax Department for 1894-95 was originally estimated at Rs. 1,88,000, and this amount has been reduced to Rs. 1,82,000 in the revised estimate for 1894-95, while the estimate for next year stands at Rs. 1,90,000. The estimate for 1895-96 includes for the first time a provision of Rs. 3,500 to meet the salary of occasional and temporary peons employed in the mufassal for the realization of the arrears of income-tax which has hitherto been charged against Land Revenue. The provision has been made on the understanding that the receipts from process-fees earned by these peons will be credited to the head of Income-tax.

"33. *Registration.*—The figures for 1895-96 exceed by Rs. 32,000 those in the budget for 1894-95, chiefly because under "District charges" larger provision has been made on account of commission payable to Special and Rural Sub-Registrars—a necessary consequence of the establishment of new offices and of the anticipated increase in registrations. A smaller sum has been provided under Superintendence, partly owing to the reduction in the salary of the Inspector General of Registration, and partly because the present incumbent is not entitled to the exchange compensation allowance.

"34. *General Administration.*—The estimate of expenditure under this head during 1895-96 amounts to Rs. 17,08,000 against Rs. 16,77,000, the budget estimate, and Rs. 17,20,000, the revised estimate for 1894-95; in the net increase of Rs. 31,000 over the budget estimate of 1894-95 the principal items are "Civil Secretariat" (Rs. 13,000) and "Commissioners" (Rs. 33,000). With regard to the first-named head, the increased provision during 1895-96 is due to larger deductions having been made on account of probable savings in 1894-95. The increase under "Commissioners" is partly due to the provision of Rs. 13,000 made towards the construction of a new steamer for the Chittagong Division, and partly to smaller deductions on account of probable savings in 1895-96.

"35. *Law and Justice—Courts of Law.*—The estimate of total expenditure for 1895-96 amounts to Rs. 90,32,000, which provides for an increase of Rs. 1,56,000 on the budget estimate, and of Rs. 1,37,000 on the revised estimate for the current year, of which Rs. 1,50,000 arises from the growth of exchange compensation allowance. The other increases of expenditure are due to the appointment of two new Munsifs and of additional establishment in the Courts of Munsifs (Rs. 20,000), and to the ordinary growth of charges for copying, process-peons, &c. (Rs. 12,000), which necessarily accompanies increased litigation. On the other hand, there is a decrease of Rs. 34,000 caused by the elimination from the budget of provision for the salaries of eight Munsifs and one Subordinate Judge employed in Assam, which were erroneously included in the budget for 1894-95.

"36. *Law and Justice—Jails.*—The estimate of total expenditure sanctioned for 1895-96 amounts to Rs. 21,47,000. The general result as compared with 1893-94 is an increase of Rs. 72,529, and as compared with the budget of 1894-95 a decrease of Rs. 97,000. The heads in which the largest fluctuations occur are those of "Supplies and Services" and "Manufactures." The expenditure under the former head chiefly depends on the number of prisoners in jail and the price of provisions. There has of late been a continued increase in both these factors, but in the coming year it is expected that the prosperity caused by a good harvest will lower the price of provisions and cause a decrease of crime. The chief items of expenditure under the head "Manufactures" are raw materials and purchase of machinery. A high figure was granted under these heads in the budget of 1894-95, which does not seem likely to be worked up to, and the grant for 1895-96 has been fixed upon a consideration of the average figures for the last five years.

"37. *Police*.—The anticipated expenditure in 1895-96 is Rs. 60,18,000 as against Rs. 55,93,000 in 1893-94, and a revised estimate of Rs. 59,12,000 in 1894-95. Over the budget estimate of 1894-95 the increase is Rs. 1,26,000.

"38. Under the head of Presidency Police, the estimate passed for 1895-96 is larger than the budget estimate for 1894-95 by Rs. 17,000. A portion (Rs. 8,000) of this increase is due to the larger provision made for exchange compensation allowance and another (Rs. 2,000) to the increase in the number of guards for public buildings required for the Calcutta Collectorate. A new provision of about Rs. 6,000 has been made for refunds with reference to the actuals, which in 1893-94 amounted to Rs. 8,043. The increase of Rs. 3,000 in the estimate for 1895-96 under (3) "Superintendence," over the budget estimate for the current year, is attributable to the increase of establishment sanctioned for the office of the Inspector-General, and to exchange compensation allowance.

"39. Comparing the budget estimates for 1894-95 and 1895-96, the net increase under the head of "District Executive Force" amounts to Rs. 98,000. The chief items under this head are a provision of Rs. 1,01,000 to enable the Inspector-General of Police to carry out further, during 1895-96, the reforms recommended by the Police Committee. Provision has been made for an increase of 563 in the number of constables and of 219 in the number of Sub-Inspectors, involving an increased cost of Rs. 1,37,000, against a reduction of 196 in the number of head-constables, resulting in a decrease of Rs. 32,000 in cost. Another large item is that of Rs. 1,59,000 provided mainly to meet the additional charge for "Station charge allowances," the grant of which is also one of the recommendations of the Police Committee; a provision of Rs. 10,000 has also been made for a school for the training of Sub-Inspectors. By these means the Lieutenant-Governor will be able to take a large step towards fulfilling the recommendations of the Police Commission, and will leave little to be done in future years.

"40. There is a provision of Rs. 16,000 under "Special Police" on account of the military police guard to be enlisted for service at Gnatong. The cost of maintaining this garrison at Gnatong will be met from the Imperial Revenues by a corresponding annual assignment of Rs. 15,650 which will be adjusted under the head of Land Revenue.

"41. *Education*.—The total sum spent by Government on education from Provincial Revenues, or under its auspices from Local Funds, is not shown under this head, but is distributed over several budgets, viz., the Medical Budget for Medical Education, the Public Works Budget, which deals with the construction and repairs of school buildings, and the budgets of District Boards and Municipalities, which contain contributions from Provincial Revenues for scholastic purposes. Recognising the incomplete character of the figures contained in the Educational Budget strictly so called, the Lieutenant-Governor has caused to be prepared a statement of which the following is an abstract, showing the true total of expenditure on education in these Provinces during 1893-94, 1894-95 and 1895-96:—

SOURCE OF PROVISION.				1893-94.	1894-95.	1895-96.
1				2	3	4
				Rs.	Rs.	Rs.
Provincial Funds	...	...	...	30,20,304	30,14,681	31,10,990
District Funds	...	...	...	10,83,441	10,86,000	12,24,343
Mohsin Fund	...	...	...	69,833	81,000	67,153
Other sources	...	...	...	18,794	10,051	8,645
Total				41,92,372	41,91,732	44,11,131

No figures are given for municipal expenditure, as the returns received are incomplete for 1894-95 and 1895-96. The actual expenditure in 1893-94 was Rs. 93,201.

"42. It is further to be noticed that out of the sum shown as contributed by District Funds, Rs. 10,39,177 (which will be increased from the year 1895-96 to Rs. 10,99,177) represent the amount made over by Government annually to District Boards for the maintenance of schools under their control. Conse-

quently as a matter of fact the true sum expended on Education from Provincial Revenues in each of the years under notice may be taken as Rs. 40,59,481, Rs. 40,53,858, and Rs. 42,10,167 respectively as shown below. The other noteworthy points in these figures are the large rise in the expenditure from the Mohsin Fund in 1894-95 and the steady decrease in the contributions from "Other sources."

"43. The figures contained in the provincial budgets under the heads of Education, Medical and Public Works stands as follows for the past, the present, and the coming year—

BUDGETS.				1893-94.	1894-95.	1895-96.
1				2	3	4
				Rs.	Rs.	Rs.
Education	...	...	...	25,72,110	26,10,000	26,72,000
Medical	...	...	...	2,90,253	2,95,000	3,02,000
Public Works Department	...	...	...	1,57,941	1,09,681	1,36,990
Total	...	...	...	30,20,304	30,14,681	31,10,990
Add Contributions to District Funds	...	...	...	10,39,177	10,39,177	10,99,177
GRAND TOTAL	...	...	...	40,59,481	40,53,858	42,10,167

"44. Turning to the Education Budget proper as it now stands, the estimate for 1895-96 exceeds the budget estimate of 1894-95 by Rs. 26,000, and the revised estimate by Rs. 62,000. Under the head of Inspection there is a decrease of Rs. 20,000, being the pay and allowances of 25 Sub-Inspectors who will be placed under District Boards with a contribution from Government to that amount which will appear in another budget. This sum forms part of the additional Rs. 60,000 mentioned in paragraph 42.

"45. *Medical.*—The estimates for 1895-96 show an increase of Rs. 1,15,000 over those originally sanctioned for 1894-95, but of Rs. 29,000 only over the revised estimate of the same year. Of the increase first named, Rs. 60,000 is accounted for by exchange compensation allowance. The orders of the Government of India establishing a reserve of medical officers involve an increased provision of Rs. 25,000, while in order to meet the increased activity of the Sanitary Department an additional grant of Rs. 15,000 has been sanctioned for travelling allowance. A sum of Rs. 8,400 will be expended on improvements at Medical Schools and Colleges.

"46. *Scientific and other Minor Departments.*—The estimate of expenditure for 1895-96 under this head amounts to Rs. 4,61,000 against Rs. 4,42,000, the budget estimate for 1894-95, and Rs. 4,37,000, the revised estimates of the same year, giving an increase of Rs. 19,000 over the budget and of Rs. 24,000 over the revised estimate of 1894-95. The only item which shows considerable increase is that of "Cinchona Plantation," and in this case it is due to the provision of Rs. 71,000, the last instalment of the purchase-money of the Nim-bong Plantation, against Rs. 50,000, the amount paid during the current year.

"47. *Stationery and Printing.*—The estimate under this head is less than the budget estimate of 1894-95 by Rs. 60,000, and than the revised estimate by Rs. 98,000. The greater part of this decrease appears under the head of "Stationery supplied from Central Stores," the estimate for which has been reduced by Rs. 70,000. Measures have been taken by Government and the Board of Revenue to effect as much economy as possible in the number of forms printed and in the quality and size of paper used for them, as well as in the consumption of forms and of stationery proper, and the Lieutenant-Governor hopes that it will be possible to make a still further reduction without at all impairing the efficiency of the Department.

"48. *Miscellaneous.*—The estimate for 1895-96 of the somewhat heterogeneous items of expenditure classed under "Miscellaneous" is Rs. 17,000 higher than the Budget of 1894-95, but Rs. 1,000 lower than the revised estimate of the same year. The principal item is an increase of Rs. 10,000 under Rents, rates and taxes, which is mainly due to the enhancement of the municipal assessment on the Bengal Secretariat building in Calcutta.

"49. The detailed figures of the heads under the control of the Public Works Department are not yet available, but will be laid upon the table on a future occasion."

**BENGAL PROVINCIAL REVENUE.**

## APPENDIX A.

*Bengal Provincial Receipts in detail of minor heads.*

[The figures in columns 4 and 5 are those accepted by the Government of India.]

*I.—Land Revenue—*

HEADS.	Actuals, 1893-94.	Budget estimate, 1894-95.	Revised estimate, 1894-95.	Estimate, 1895-96.	REMARKS.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	
Gross Land Revenue (excluding recoveries of Bihar Survey and Settlement charges which are wholly Imperial) ...	3,87,06,000	3,85,00,000	3,86,50,000	3,87,00,000	
Deduct 12 per cent. on estimated collections from Government estates ...	4,79,000	4,75,000	4,75,000	4,77,000	
Net amount divisible between Imperial and Provincial Funds ...	3,82,27,000	3,80,25,000	3,81,75,000	3,82,23,000	
Provincial share of above (one-fourth) ...	95,57,000	95,06,000	95,44,000	95,56,000	
Deduct on account of adjustments as shown below*	14,57,000	16,08,000	14,60,000	9,02,000	
Add 12 per cent. collections	81,00,000	78,98,000	81,84,000	85,64,000	
Total Provincial share ...	85,79,000	83,73,000	85,59,000	90,11,000	

*\* Adjustments—*

Fixed contribution to Imperial Revenue under the terms of the contract ...	14,39,000	14,39,000	14,39,000	14,31,000	
Add (payable to the Imperial Fund) ...					
Interest on the advance for the Hidgelee Tidal Canal ...	19,000	23,000	21,000	20,000	
Write-back of the excess credit (Rs. 44,000-52,000) taken in 1892-93 on account of Imperial buildings made over to local agencies for execution ...	12,000	.....	.....	.....	
Compensation to the Government of North-Western Provinces and Oudh for the loss sustained by that Government for the importation of Shahjehanpur rum under bond ...	52,000	.....	.....	.....	
Special contribution to Imperial Funds ...	.....	3,00,000	3,00,000	.....	
Repayment of part of the advance for the remodelling of the Hidgelee Tidal Canal ...	8,000	.....	.....	.....	
Total to be deducted from the Provincial share ...	15,30,000	17,62,000	17,60,000	14,65,000	
Deduct (to be received from Imperial Funds)—					
• Advance for the remodelling of the Hidgelee Tidal Canal ...	.....	1,26,000	1,06,000	1,65,000	
Grant on account of Imperial buildings placed under local bodies ...	53,000	10,000	14,000	10,000	
Compensation for loss sustained by the Provincial Revenues on account of the reservation of the Western Duns for the Khudda Department ...	11,000	18,000	11,000	18,000	
Salary of Mr. H. Davis, probationer gardener at Sibpur ...	.....	.....	1,000	.....	
Write-back to the Provincial Funds of the contribution to the Provincial Fund of the Tichut State Railway charged in the accounts of 1892-93 ...	9,000	.....	.....	.....	
Grant for the additional establishment entertained in the Calcutta Custom House on the introduction of the new Tariff Act ...	.....	.....	1,64,000	2,64,000	
Contribution towards the cost of a prison van for the conveyance of convicts by rail ...	.....	.....	2,000	.....	
Assignment for the Gnatong Police Guard ...	.....	.....	2,000	16,000	
Total ...	73,000	1,64,000	3,00,000	4,73,000	
Net sum to be transferred ...	14,57,000	16,08,000	14,60,000	9,92,000	

*III.—Salt—*

Rents of ware-houses ...	43,000	50,000	50,000	57,000	The increase in 1894-95 is due to the larger stock of bonded salt in the godowns, owing to the unusually large importations of salt in that year.
Fines and forfeitures ...	34,000	30,000	40,000	38,000	
Miscellaneous ...					
Total Provincial ...	77,000	80,000	1,20,000	95,000	

*IV.—Stamps—*

HEADS.	Actuals, 1893-94.	Budget estimate, 1894-95.	Revised estimate, 1894-95.	Estimate, 1895-96.	REMARKS.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	
Sale of General stamps ... ..	44,37,000	44,35,000	44,90,000	44,90,000	There is a steady growth of revenue from this source especially under Court-fee stamps.
Sale of Court-fee stamps ... ..	1,12,05,000	1,13,50,000	1,19,25,000	1,19,25,000	
Sale of plain paper to be used with Court fee stamps ... ..	2,33,000	2,25,000	2,43,000	2,43,000	
Duty on impressing documents ... ..	8,000	8,000	8,000	8,000	
Fines and penalties ... ..	30,000	30,000	31,000	31,000	
Miscellaneous ... ..	3,000	2,000	2,000	2,000	
Total ... ..	1,59,76,000	1,60,50,000	1,67,00,000	1,67,00,000	
Provincial share—(three-fourths) ... ..	1,19,82,000	1,20,38,000	1,25,25,000	1,25,25,000	

*V.—Excise—*

License and Distillery fees and Duties for the sale of Liquors and Drugs ... ..	91,35,000	91,15,000	94,90,000	96,30,000	The revenue shows a progressive increase since 1891-92.
Gain on sale-proceeds of excise opium ... ..	1,42,000	1,40,000	16,70,000	16,70,000	
Duty on ganja ... ..	13,58,000	13,00,000	13,80,000	13,90,000	
Fines, confiscations and miscellaneous ... ..	13,000	15,000	10,000	10,000	
Total ... ..	1,21,48,000	1,21,00,000	1,25,50,000	1,27,00,000	
Provincial share—(one-fourth) ... ..	30,37,000	30,25,000	31,37,000	31,75,000	

*VI.—Provincial Rates—*

Public Works Cess ... ..	41,34,000	42,00,000	41,65,000	41,40,000	The cost of collecting Road cess was in 1893-94 and previous years treated as a Provincial charge, a corresponding credit being given to Provincial from Local Funds. Owing to a change in the method of adjustment, which will be introduced in the accounts of 1894-95 and subsequent years, by which such charges will be debited direct to Local Funds, the formal credit to Provincial Funds will disappear.
Proportionate cost of establishment for collecting cesses ... ..	3,47,000	3,20,000	.....	.....	
General rates for management of Private Estates under Act X of 1892 ... ..	1,32,000	1,40,000	1,35,000	1,35,000	
Total ... ..	46,13,000	46,60,000	43,00,000	42,81,000	

*VII.—Customs—*

Sea Customs—Miscellaneous ... ..	56,000	51,000	60,000	56,000	
Warehouse and Wharf rent ... ..	3,000	4,000	5,000	5,000	
Total Provincial ... ..	59,000	55,000	65,000	61,000	

*VIII.—Assessed Taxes—*

Deductions by Government from salaries and pensions, &c. ... ..	4,79,000	4,65,000	4,80,000	4,80,000	The increase is attributable to better assessments.
Deductions by Government from interest on Government securities ... ..	14,000	16,000	16,000	16,000	
Deductions by Government from salaries, &c., paid by local authority or company ... ..	48,000	45,000	53,000	53,000	
Deductions by Government from salaries, &c., paid by Railway Company ... ..	3,000	5,000	4,000	4,000	
Ordinary collections ... ..	37,90,000	37,20,000	39,00,000	39,00,000	
Penalties ... ..	31,000	33,000	31,000	31,000	
Miscellaneous ... ..	15,000	16,000	16,000	16,000	
Total ... ..	43,50,000	43,00,000	45,00,000	45,00,000	
Provincial share—(one-half) ... ..	21,75,000	21,50,000	22,50,000	22,50,000	

*IX.—Forests.—*

Timber and other produce removed from the forests by Government agency ... ..	15,000	20,800	27,300	19,200

Medical Schools and College Fees ... ..	42,000	33,000	52,000	47,000	The actuals show a progressive increase. Based on actuals.
Hospital receipts ... ..	86,000	81,000	91,000	86,000	
Lunatic Asylum receipts ... ..	28,000	21,000	20,000	28,000	
Contributions from municipalities and private persons ... ..	32,000	32,000	35,000	37,000	
Miscellaneous ... ..	2,000	2,000	2,000	2,000	
Total ... ..	1,39,000	1,77,000	2,10,000	2,00,000	

*XXI.—Scientific and other Minor Departments.*

Botanical and other public garden receipts ... ..	5,000	5,000	5,000	5,000	Increase anticipated in consequence of the more extensive sale of gumme in pice packets. Based on the actuals of the past three years. A new item of receipts estimated by the Director of Land Records and Agriculture.
Cinchona plantation ... ..	1,37,000	1,25,000	1,25,000	1,45,000	
Receipts on account of experimental cultivation ... ..	3,000	5,000	2,000	4,000	
Emigration fees ... ..	31,000	36,000	47,000	36,000	
Examination fees ... ..	1,000	4,000	4,000	4,000	
Veterinary receipts ... ..	2,000	5,000	2,000	5,000	
Total ... ..	1,83,000	1,74,000	1,83,000	1,99,000	

*XXII.—Superannuation—*

Family subscriptions of native members of the Covenanted Civil Service ... ..	1,000	1,000	1,000	1,000	Estimates based on the actual demands in the Accountant-General's books. The decrease is partly due to the retirement of officers lent to foreign service, and partly to exemption from payment of contribution towards pension by Sub-Inspectors of Schools and teachers, whose services have been transferred to District Boards.
Contributions of officers lent to Municipalities or Corporations ... ..	20,000	18,000		26,300	
Contributions of officers lent to Foreign Service ... ..	44,000	41,700	67,000	23,000	
Contributions of persons employed by the Court of Wards ... ..	13,500	11,000		11,400	
Refunds of gratuities ... ..	500	300		300	
Total Provincial ... ..	79,000	72,000	68,000	68,000	

**XXIII.—Stationery and Printing—**

HEADS.	Actuals, 1893-94.	Budget estimate, 1894-95.	Revised estimate, 1894-95.	Estimate, 1895-96.	REMARKS.
1	2	3	4	5	6
Stationery receipts ... ..	Rs. 1,000	Rs. 1,000	Rs. 1,000	Rs. 1,000	
Sale of Gazettes ... ..	18,000	19,000	19,000	19,000	
Sale of Indian Law Reports ... ..	44,000	44,000	40,000	47,000	
Sale of other publications ... ..	28,000	28,000	28,000	29,000	
Other Press receipts ... ..	35,000	30,000	28,000	31,000	
Total Provincial ...	1,26,000	1,22,000	1,22,000	1,27,000	

**XXV.—Miscellaneous—**

Unclaimed deposits ... ..	2,92,000	3,80,000	3,60,000	3,60,000	Estimate based on the average receipts of the past five years. Estimate based on the actuals of twelve months ending the 30th September 1894. The receipts in 1893-94 were unusually low. The actuals of 1893-94 included a special receipt of Rs. 23,000 on account of sale of railway lands.
Sale-proceeds of Durbar presents ... ..	5,000	10,000	20,000	15,000	
Sale of old stores and materials ... ..	34,000	35,000	45,000	35,000	
Sale of lands and houses, &c. ... ..	27,000	2,000	11,000	5,000	
Fees for Government audits (of Municipal and Incorporated Local Funds) ... ..	70,000	71,000	71,000	75,000	
Rents ... ..	28,000	20,000	28,000	25,000	Based on past actuals. The actuals include large realizations from the sale of elephants and special receipts from the sale of trees on waste lands in Jalpaiguri and Darjeeling.
Miscellaneous fees, fines and forfeitures ... ..	2,14,000	1,10,000	2,40,000	2,60,000	
Miscellaneous ... ..	1,91,000	1,55,000	1,60,000	1,47,000	
Total Provincial ...	8,63,000	8,13,000	9,35,000	8,62,000	

**XXVI.—State Railways. Eastern Bengal State Railway—**

Gross receipts ... ..	1,24,95,000	1,22,00,000	...	...	The receipts under this head fluctuate so largely that the revised figures for 1894-95 can not be taken as a safe guide.
Working expenses ... ..	54,25,000	55,00,000	...	...	
Net receipts ... ..	70,70,000	67,00,000	80,00,000	73,00,000	
Provincial share (one-half) ... ..	35,35,000	33,50,000	40,00,000	36,50,000	

**XXIX.—Irrigation—Major Works—**

Orissa canals ... ..	3,76,000	3,40,000	3,19,000	3,28,000
Midnapore canal ... ..	3,05,000	2,70,000	2,62,000	2,77,000
Hijili Tidal canal ... ..	6,00,000	55,000	45,000	64,000
Sone canals ... ..	9,22,000	8,35,000	8,24,000	8,45,000
Total ...	16,72,000	15,00,000	14,60,000	15,00,000

**XXX.—Minor Works and Navigation in charge of the Public Works Department—**

<b>Irrigation and Navigation Works.</b>				
Works for which Capital and Revenue accounts are kept—				
Baran Canals ... ..	7,000	11,000	1,000	1,000
Calcutta and Eastern Canals ... ..	4,21,000	4,80,000	4,28,000	4,30,000
Orissa Coast Canal ... ..	98,000	82,000	65,000	88,000
Total ...	5,26,000	5,73,000	4,94,000	5,19,000
Works for which only Revenue accounts are kept—				
Nadia rivers ... ..	1,71,000	1,90,000	1,50,000	1,70,000
Works for which neither Capital nor Revenue accounts are kept—				
Eden Canal ... ..	37,000	40,000	30,000	30,000
Total Irrigation and Navigation Works ...	7,34,000	8,03,000	6,74,000	7,19,000
<b>Agricultural Works.</b>				
Works for which neither Capital nor Revenue accounts are kept—				
Government embankments ... ..	7,000	8,000	5,000	5,000
Takawi embankments under contract ... ..	4,000	4,000	1,000	1,000
Total Agricultural Works ...	11,000	12,000	6,000	6,000
GRAND TOTAL ...	7,45,000	8,15,000	6,80,000	7,25,000

## XXX.—Minor Works and Navigation in charge of Civil Officers—

HEADS.	Actuals, 1893-94.	Budget estimate, 1894-95.	Revised estimate, 1894-95.	Estimate, 1895-96.	REMARKS.
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	
Recoveries on account of zamindari embankments under the contract system ...	1,08,000	1,03,000	1,03,000	1,13,000	
Recoveries on account of capitalized maintenance charges of the Dankum drainage system ...	17,000	10,000	15,000	4,000	
Receipts of the Dankum and Howrah drainage schemes ...	3,000	3,000	7,000	4,000	
Recoveries on account of capitalized maintenance charges of the Howrah drainage scheme—Maintenance and establishment ...	.....	.....	78,000	40,000	
Total ..	1,28,000	1,16,000	2,03,000	1,61,000	

## XXXII.—Civil Works in charge of the Public Works Department—

Ordinary receipts ... ..	.....	1,20,000	*2,15,000	† 1,50,000	* Include the following special receipts:— Rs. Sale proceeds of dak bungalow and circuit house at Chitragong ... 11,200 Sale proceeds of lands in the police compound, Calcutta ... 10,000 Expected sale proceeds of Manicktolla distillery ... 40,000 Increase of rents of Government buildings owing to the revised assessment ... 30,000 Total ... 91,200
Profits payable by the Darjeeling-Himalayan Railway ... ..		30,000	30,000	30,000	† The increase of Rs. 30,000 in the budget estimate for 1895-96 over the budget estimate for 1894-95 is also due to the anticipated increase in the rents of Government buildings owing to the revised assessments of these buildings.
Total ...	‡ 3,07,000	1,50,000	2,45,000	1,80,000	‡ The actuals include (1) the Government share of the profits of the Darjeeling-Himalayan Railway for four years ending the 30th June 1893, and (2) the gross profit of Rs. 30,000 on the working of the Calcutta workshops.

## XXXII.—Civil Works in charge of Civil Officers—

Tolls on ferries ... ..	2,35,000	2,25,000	2,12,000	2,35,000
Cemetery receipts ... ..	1,500	2,500	2,000	2,000
Miscellaneous ... ..	1,500	500	1,000	1,000
Total ...	2,38,000	2,28,000	2,15,000	2,38,000

## APPENDIX B.

*Bengal Provincial Expenditure in detail of minor heads.*

[The figures in columns 4 and 5 are those accepted by the Government of India.]

1. *Refunds and Drawbacks—*

HEADS.	Actuals, 1893-94.	Budget estimate, 1894-95.	Revised estimate, 1894-95.	Estimate, 1895-96.	REMARKS.
1	2	3	4	5	6
	Rs. 8,000	Rs. 9,000	Rs. 9,000	Rs. 8,000	
Provincial Rates ... ..	...	...	...	...	Based on the average actuals of the past three years. The increase under Excise in 1893-94 was due to a special payment of Rs. 42,000 to Messrs. Carey and Company on account of extra duty on rum.
Salt (other than customs and excise duty) ... ..	...	...	...	...	
Customs (other than export and import duty) ... ..	...	...	...	...	
Land Revenue (one-fourth) ... ..	13,000	11,000	15,000	12,000	
Stamps (three-fourths) ... ..	1,08,000	1,08,000	1,02,000	1,06,000	
Excise (one-fourth) ... ..	13,000	1,000	3,000	2,000	
Assessed taxes (one-half) ... ..	14,000	21,000	19,000	21,000	
Forest (one-half) ... ..	...	1,000	1,000	1,000	
Registration (one-half) ... ..	1,000	1,000	2,000	1,000	
Total ... ..	1,57,000	1,55,000	1,51,000	1,52,000	

2. *Assignments and Compensation—*

Malikana .. .. .	1,59,000	1,79,000	1,65,000	1,72,000	The estimates of District Officers as passed by the Board of Revenue have been accepted. This is a compulsory charge and varies from year to year according to resettlement or new-settlement of estates.

3. *Land Revenue—*

Charges of District Administration ... ..	30,46,000	30,69,000	31,13,000	31,84,000	Increase chiefly for exchange compensation allowance, and partly for increases under certified department, (transferred from Provincial Rates), partition establishment, and survey of waste lands in Jalpaiguri.
Management of Government estates .. ..	4,03,000	3,87,000	4,00,000	4,14,000	In the estimates for 1895-96 a provision of Rs. 50,000 has been made to meet the cost of works of agricultural improvement in Government estates by a corresponding reduction in the Public Works Department grant for Irrigation Minor Works.
Land Records and Agriculture ... ..	81,000	80,000	87,000	90,000	The increase is due partly to increased charges for temporary establishment, and partly for the payment of local allowance to the Director of Land Records and Agriculture.
Total ... ..	35,30,000	35,36,000	36,00,000	36,88,000	

5. *Salt—*

Salaries, establishment and contingencies .. ..	27,000	33,000	40,000	36,000	The increase in 1894-95 was due chiefly to the hiring of sheds at the Kidderpore Docks for the storage of the unusually large importation of salt, and partly for the temporary establishments in connection therewith, and also for structural alterations in the salt warehouses. The estimate for 1895-96 also provides for increased expenditure in the hire of godowns rents for the storage of salt.
---	--------	--------	--------	--------	--

6. *Stamps—*

Superintendence ... ..	83,000	83,000	78,000	86,000	The decrease in 1894-95 is chiefly in consequence of the appointment of a lower paid officer as Superintendent of Stamps in place of the permanent incumbent on leave in England.
Charges for the sale of general stamps ... ..	1,05,000	1,07,000	1,07,000	1,08,000	
Charges on sale of court-fee stamps ... ..	1,15,000	1,21,000	1,17,000	1,18,000	
Discount on plain paper ... ..	14,000	11,000	14,000	14,000	
Stamp paper supplied from Central Stores ... ..	3,15,000	3,57,000	3,57,000	3,69,000	The increase is a necessary concomitant of the increase in receipts, as it is caused by the larger supplies of paper taken out to be impressed with stamps, and also to be sold for use with adhesive stamps.
Total ... ..	6,32,000	6,82,000	6,73,000	6,95,000	
Provincial share (three-fourths) ... ..	4,74,000	5,12,000	5,05,000	5,22,000	

7. *Excise—*

HEADS.	Actuals 1893-94.	Budget estimate, 1894-95.	Revised estimate, 1894-95.	Estimate 1895-96.	REMARKS.
1	2	3	4	5	6
Superintendence ... ..	Rs. 64,000	Rs. 71,800	Rs. 66,000	Rs. 78,000	Rupees 4,000 have been provided for exchange compensation allowance and Rs. 1,500 for local allowances of Rs. 60 per mensem to each of the two Inspectors.
Presidency establishment ... ..	89,000	97,400	84,000	90,000	
District establishment—					The saving in 1894-95 is chiefly in the charges for contingencies and for the construction of distillery buildings.
Badar establishment ... ..	1,03,000	1,64,269	2,62,000	1,00,212	
Inspection and prevention ... ..	1,61,000	1,57,832		1,58,762	
Allowances ... ..	80,000	78,803		81,026	
Distilleries establishment ... ..	63,000	63,395	2,28,000	63,612	
Supplies and services ... ..	27,000	27,015		27,000	
Contingencies ... ..	62,000	70,296		70,388	
<b>Total</b> ... ..	<b>6,40,000</b>	<b>6,70,000</b>	<b>6,40,000</b>	<b>6,64,000</b>	
Provincial share (one-fourth) ... ..	1,60,000	1,67,500	1,60,000	1,66,000	

8. *Provincial Rates—*

Collection of rates and cesses ... ..	3,01,000	3,16,200	44,500	44,500	The decrease is due to a change in the mode of adjusting the cost of collection and valuation and revaluation charges, which from the year 1891-95 will be debited direct to the District Funds in the Local Funds account, instead of being passed through the Provincial accounts.
Valuation and revaluation work ... ..	1,27,000	79,800	29,500	40,500	
<b>Total</b> ... ..	<b>4,28,000</b>	<b>3,96,000</b>	<b>74,000</b>	<b>85,000</b>	

9. *Customs—*

Calcutta { Establishment ... ..	4,59,000	4,73,692	7,31,000	8,13,140	The increase in 1894-95 is for additional establishment entertained in the Calcutta Custom House consequent on the introduction of the new Tariff Act. Further increased provision has been made in 1895-96 for additional establishment required on the re-imposition of the cotton duties.
Exchange compensation allowance ... ..	9,000	16,816			
Contingencies ... ..	33,000	48,922			
Balasore ... ..	5,000	4,920	5,000	4,900	
Chittagong ... ..	27,000	26,500	27,000	27,400	
Cuttack ... ..	7,000	6,700	7,000	7,400	
Dacca ... ..	1,000	720	1,000	720	
Puri ... ..	1,000	1,450	1,000	1,410	
<b>Total</b> ... ..	<b>5,42,000</b>	<b>5,79,000</b>	<b>7,73,000</b>	<b>8,55,000</b>	

10. *Assessed Taxes—*

Collection of Income tax ... ..	1,79,000	1,88,000	1,82,000	1,90,000	The increase is due partly to smaller savings assumed, and partly for a provision of Rs. 3,500 for the salary of temporary peons employed in the assessment for the realization of the arrears of income tax.
Provincial share (one-half) ... ..	89,000	90,000	91,000	95,000	

11. *Forest—*

<b>A.—Conservancy and Works.</b>				
I.—Timber and other produce removed from the forests by Government agency .. ..	7,000	11,500		6,100
II.—Timber and other produce removed from the forests by consumers or purchasers .. ..	55,000	50,200	...	51,000
III.—Compensated, drift and waif wood .. ..	2,000	3,300	...	3,400
IV.—Revenue from forests not managed by Government .. ..	.....	.....	...	.....
V.—Rent of leased forests and payments to shareholders in forests managed by Government .. ..	.....	.....	...	.....
VI.—Livestock, stores, tools and plant .. ..	12,000	12,600	...	11,400
VII.—Communications and buildings .. ..	49,000	52,800	...	54,000
VIII.—Demarcation, improvement and extension of forests .. ..	23,000	30,600	...	31,500
IX.—Miscellaneous .. ..	7,000	7,000	...	3,400
<b>Total A—Conservancy and Works</b> .. ..	<b>1,50,000</b>	<b>1,80,000</b>		<b>1,61,000</b>
<b>B.—Establishments.</b>				
I.—Salaries .. ..	2,10,000	2,35,000	...	2,47,200
II.—Travelling allowances .. ..	31,000	31,200	...	38,000
III.—Contingencies .. ..	10,000	10,800	...	12,500
<b>Total B—Establishments</b> .. ..	<b>2,51,000</b>	<b>2,80,000</b>		<b>2,97,700</b>
<b>GRAND TOTAL OF EXPENDITURE</b> .. ..	<b>4,04,000</b>	<b>4,60,000</b>	<b>1,20,000</b>	<b>4,59,000</b>
<b>Provincial share (one-half)</b> .. ..	<b>2,02,000</b>	<b>2,30,000</b>	<b>2,10,000</b>	<b>2,30,000</b>

The estimate for 1895-96 includes provision for two new supernumerary Assistant Conservators, 2nd grade, who have recently been posted from England.  
\* Details not communicated by the Government of India.

## 12.—Registration—

HEADS.	Actuals, 1893-94.	Budget estimate, 1894-95.	Revised estimate, 1894-95.	Estimate, 1895-96.	REMARKS.
1	2	3	4	5	6
<i>Superintendence</i> ... ..	Rs. 61,000	Rs. 62,000	Rs. 56,000	Rs. 51,000	The saving under this head is due to the appointment of lower post-officers to the offices of the Inspector-General and the Inspectors of Registration offices.
<i>District charges—</i>					
Calcutta ... ..	10,000	19,402	10,000	18,702	Increase for the opening of new sub-registry offices and for progressive increase in the charges for commission.
Special Sub-Registrars—					
Salaries, establishment, contingencies, and travelling allowance ... ..	1,41,000	1,48,508	7,31,000	{ 1,51,208 90,000 5,00,000 1,000	
Commission ... ..	5,50,000	59,000			
Rural Sub-Registrars ... ..	5,50,000	1,70,000			
<i>Ex-officio ditto</i> ... ..	5,000	1,000	1,000	1,000	
Total District charges ... ..	7,25,000	6,98,900	7,51,000	7,70,000	
GRAND TOTAL ... ..	7,86,000	7,60,900	8,10,000	8,21,000	
Provincial share (one-half) ... ..	3,93,000	3,80,450	4,05,000	4,10,500	

\* Included in the commission of Rural Sub-Registrars till the 31st March 1894.

## 13.—Interest on Ordinary Debt—

Interest on Provincial advances and loan account ..	1,45,000	1,78,000	1,71,000	2,18,000	Both the revised estimate for 1894-95 and the estimate for 1895-96 are based on the estimated mean balances carrying interest at 4 per cent. per annum.
---	----------	----------	----------	----------	---

## 15. Post Office—

Conveyance of Mails, South Lushai Hills	3,000	3,000	3,000	3,000	The expenditure has hitherto been adjusted under the major head "Land Revenue, Management of Government Estates," but as the charges are now adjusted under "15—Post Office, Provincial," provision has been made here to accord with the actuals.
Establishment in Postmaster-General's and Deputy-Postmaster-General's Office	5,000	5,000	5,000	5,000	
Tak establishment at Puri and Cuttack					
Total ... ..	8,000	8,000	8,000	10,000	

## 16. General Administration—

Salary of Lieutenant-Governor ... ..	1,17,000	1,10,000	1,02,000	1,02,000	The increase in 1894-95 is due chiefly to the absence of officers on privilege leave.
Staff and household of Lieutenant-Governor	2,000	30,000	30,000	2,500	
Tour expenses ... ..	3,000	31,000	31,000	31,000	
Legislative Council ... ..	21,000	26,000	26,000	25,500	
Civil Secretariat ... ..	5,50,000	5,28,000	5,60,000	5,11,000	
Board of Revenue ... ..	2,39,000	2,95,000	2,80,000	2,93,000	
Commissioners ... ..	5,82,000	5,79,000	6,10,000	6,11,000	
Civil Offices of Account and Audit ... ..	70,000	75,000	72,000	70,000	
Total ... ..	17,65,000	16,77,000	17,20,000	17,98,000	

## 19A.—Law and Justice—Courts of Law—

High Court ... ..	11,18,000	11,75,000	11,70,000	11,92,000	Increase due chiefly for exchange compensation allowance.
Law Officers ... ..	3,01,000	2,30,000	2,63,000	2,07,000	
Criminal Court ... ..	13,000	13,000	13,000	13,000	Increase due chiefly on account of exchange compensation allowance and remuneration to copyists.
Presidency Magistrates ... ..	63,000	65,000	65,000	65,000	
Civil and Sessions Courts ... ..	40,29,000	40,32,000	40,60,000	40,75,000	Ditto ditto.
Court of Small Causes ... ..	1,68,000	1,60,000	1,73,000	1,75,000

Total Manufactures ... ..	6,19,000	7,55,100	5,75,000	6,95,500	Grant for raw materials reduced with reference to the past actuals.
Petty Construction ... ..	39,000	23,100		13,000	
Do. Repairs ... ..				12,000	
GRAND TOTAL ... ..	20,75,000	22,14,000	20,50,000	21,47,000	

20. Police—

Presidency Police ... ..	7,37,000	7,30,000	7,50,000	7,47,000	Increase due to (a) exchange compensation allowance, (b) rent, rates and taxes, and (c) refunds.
Municipal Police ... ..	36,000	37,000	37,000	37,000	
Superintendence ... ..	1,52,000	1,50,000	1,70,000	1,53,000	Increased provision in the revised estimate for 1894-95 is chiefly for the payment of privilege leave allowances. The increase in 1895-96 as compared with the grant for 1894-95 is chiefly due to additional provision made on account of (a) increase in the number of constables and Sub-Inspectors, (b) station charge allowance, (c) police clothing, (d) petty construction, and (e) exchange compensation allowance.
District Executive Force ... ..	40,80,000	42,08,000	42,75,000	43,96,000	
Village Police ... ..	23,000	24,000	30,000	24,000	
Special Police ... ..	1,54,000	5,39,000	5,44,000	5,49,500	
Railway Police ... ..	1,01,000	1,06,000	1,06,000	1,04,000	Increased provision made to meet charges on account of the new Military Police at Ghatong.
Cattle-pounds ... ..	4,000	6,000	6,000	5,500	
Refunds ... ..	3,000	3,000	3,000	2,000	
Total ... ..	50,93,000	58,92,000	59,12,000	60,18,000	

21. Marine—

Salaries and allowance of officers and men afloat ... ..	60,000	68,500	65,000	69,000	Increase in the revised estimate for 1894-95 is due to a provision of Rs. 16,000 for removing part of the <i>Tank</i> <i>Revolvers</i> .
Victualling of officers and men afloat ... ..	17,000	23,000	18,000	20,000	
Purchase of marine stores, &c. ... ..	80,000	80,000	1,01,000	87,000	
Ditto and hire of ships and vessels ... ..	1,24,000	10,000		10,000	The charges under this head fluctuate and depend chiefly on the tonnage of vessels visiting the port.
Photage and Pilot establishment and vessels ... ..	5,22,000	5,67,000	5,40,000	5,54,000	
Marine establishments ... ..	82,000	84,800	83,000	87,000	Increase in the revised estimate for 1894-95 is due to the payment of arrears demands.
Subsidies to steam-boat companies ... ..	16,000	20,000	28,000	20,000	
Miscellaneous ... ..	32,000	39,700	26,000	38,000	
State Yacht establishment ... ..	7,000	5,500	7,000	5,700	
Boatmen ... ..	1,000	500		300	
Total ... ..	9,41,000	8,99,000	8,92,000	8,97,000	

## 22. Education—

HEADS.	Actuals, 1893-94.	Budget estimate, 1894-95.	Revised estimate, 1894-95.	Estimate, 1895-96.	REMARKS.
1	2	3	4	5	6
Direction ... ..	Rs. 65,000	Rs. 70,000	Rs. 70,000	Rs. 74,000	The decrease in the actuals of 1893-94 is due to a lower paid officer having been appointed to act as Director of Public Instruction during the absence on leave of the permanent incumbent.
Inspection ... ..	3,55,000	3,63,000	3,70,000	3,40,000	The decrease in 1895-96 is due to the transfer of 25 Sub-Inspectors to District Boards.
Government Colleges, General ... ..	5,18,000	5,30,000	5,30,000	5,60,000	Increase due to exchange compensation allowance, appointment of an additional lecturer for the Dacca College, cost of compiling a new catalogue of Sanskrit manuscripts, and also to increase in municipal taxes.
Government Colleges, Professional ... ..	1,23,000	1,19,000	1,18,000	1,34,000	Increase due to the appointment of a teacher of free-hand and ornamental drawing in the Shibpur Engineering College, to the provision of the cost of medical establishment of the College, which was formerly shown under Civil Works and to increased provision for tools and materials and boarding charges of the College owing to an increase in the number of students.
Government Schools, General ... ..	5,39,000	5,30,000	5,45,000	5,45,000	The estimate for 1894-95 included a special grant of savings of the preceding year.
Government Schools, Special ... ..	1,52,000	1,49,000	1,49,000	1,52,000	
Grants-in-aid ... ..	5,73,000	6,31,000	5,75,000	6,20,000	
Scholarships ... ..	1,94,000	1,93,000	1,93,000	1,94,000	
Miscellaneous ... ..	47,000	46,000	50,000	47,000	
Refunds ... ..	6,000	4,000	4,000	6,000	
Total ... ..	25,72,000	26,46,000	26,10,000	26,72,000	

## 24.—Medical—

Medical establishment ... ..	6,16,000	6,28,000	6,80,000	6,91,000	The increase as compared with the estimate of 1894-95, is due chiefly to the following causes— (i) Increased provision under salaries of district medical officers consequent on grade promotions, and increased payments on account of exchange compensation allowance. (ii) To the allowance to be granted to clerks for doing vaccination work; and (iii) To increased provision under reserve medical subordinates consequent on the increase in their number.
Hospitals and dispensaries ... ..	4,45,000	4,26,000	4,35,000	4,38,000	The increase as compared with the estimate of 1894-95 is due to larger provision on account of expenditure for diet and clothing of patients in hospital, and also for exchange compensation allowance.
Sanitation and vaccination ... ..	2,07,000	2,12,000	2,20,000	2,24,000	The increase, as compared with the estimate of 1894-95, is due chiefly to the following causes— (i) Increased provision on account of exchange compensation allowance to officers of the Medical College and to the provision of Rs. 5,000 to fitting up an anatomical museum in that College. (ii) To smaller deductions made under salaries of medical schools and to the special provision of Rs. 8,000 for models and diagrams for medical schools.
Grants for medical purposes ... ..	2,000	4,000	4,000	3,000	
Medical Schools and Colleges ... ..	2,90,000	2,75,000	2,95,000	3,03,000	
Lunatic Asylums ... ..	1,13,000	1,14,000	1,14,000	1,18,500	
Lock-hospitals ... ..	16,000	16,000	16,000	16,000	
Chemical Examiner ... ..	24,000	28,000	25,000	24,500	Decrease is due chiefly to smaller provision made under salaries consequent on the appointment of lower paid officers.
Refunds ... ..	1,000	1,000	1,000	1,000	
Total ... ..	17,14,000	17,04,000	17,80,000	18,19,000	

25. *Political*—

HEADS.	Actuals, 1893-94.	Budget estimate 1894-95.	Revised estimate, 1894-95.	Estimate, 1895-96.	REMARKS.
1	2	3	4	5	6
Entertainment of Envoys and Chiefs ... ..	Rs. 1,000	Rs. 9,000	Rs. 1,000	Rs. 1,500	The estimate of 1894-95 included provision for the South Lushai Hills which has, both in the revised estimate for 1894-95 and in the estimate for 1895-96, been provided for under the head "Miscellaneous," where the charges are being adjusted. The expenditure in 1894-95 is unusually high because articles for presentation bought in 1893-94 were paid for in the following year.
Durbar presents and allowances to vakeels, &c. ...	6,000	17,000	20,000	17,000	
Miscellaneous ... ..	9,000	3,000	9,000	7,500	
Total ... ..	16,000	29,000	30,000	26,000	

26. *Scientific and other Minor Departments*—

Provincial Museums ... ..	21,000	18,200	18,000	17,000	The decrease is due to the expected absence of the Assistant Secretary on leave for a part of the year, and to his appointment remaining vacant for the period.
Imperial Institute ... ..	14,000	14,000	14,000	500	
Donations to Scientific Societies ... ..	10,000	21,500	17,000	14,000	This includes Rs. 11,000 on account of Agricultural and Rs. 10,500 on account of silk experiments.
Experimental cultivation ... ..				21,500	
Cinchona plantation ... ..	1,77,000	1,75,000	1,75,000	1,93,000	The increase is due to the provision of Rs. 71,000, the last instalment of the purchase-money of the Nim-bong Plantation, against Rs. 50,000, the payment during 1894-95.
Public Exhibitions and Fairs ... ..	12,600	2,000	2,000	2,000	The actuals of 1893-94 include a special payment of Rs. 10,000 for the display of Indian Tea at the Chicago Exhibition.
Veterinary and Stallion charges ... ..	16,000	22,000	20,000	19,500	The low actuals of 1893-94 were chiefly in consequence of the appointment of officers and establishment towards the latter part of the year.
Botanical and other Public Gardens ... ..	1,16,000	1,15,000	1,15,000	1,19,000	The increase is due to grade increments.
Emigration ... ..	25,000	23,100	24,000	24,000	The high actuals of 1893-94 were due to charges incurred for rewriting Census Registers.
Inspector of Factories ... ..	21,000	19,000	21,000	21,000	
Census ... ..	4,000	2,000	2,900	2,000	
Registration of railway traffic ... ..	4,000	3,500	4,000	4,000	
Registration of river-borne traffic ... ..	18,000	18,000	18,000	18,000	
Provincial statistics ... ..	5,000	5,200	1,000	2,200	
Miscellaneous ... ..			1,000		
Examinations ... ..	3,000	3,000	3,000	3,300	
Refunds ... ..		500	1,000		
Total ... ..	4,52,000	4,42,000	4,37,000	4,61,000	

29. *Superannuation Allowances and Pensions*—

Superannuation and retired allowances ... ..	16,99,000	18,20,000	17,60,000	17,75,000	Based on actual claims taken from the registers of the Accountant-General's office, it takes into account transfers and lapses by the death of life grantees.
Compassionate allowances ... ..	29,000	22,000	22,000	22,000	
Gratuities ... ..	19,000	8,000	8,000	8,000	The actuals of 1893-94 included a special payment of Rs. 10,000 to Lieutenant E. W. Pelly as compensation for the loss of his appointment as Port Officer of Calcutta.
Total ... ..	17,40,000	18,50,000	17,90,000	18,05,000	

30. *Stationery and Printing*—

Stationery Office at the Presidency ... ..	1,66,000	1,59,000	1,59,000	1,57,000	The decrease is more than accounted for by the omission of all provision for hire of godowns for the storage of forms, &c., in consequence of the erection of the new stationery building.
Stationery purchased in the country ... ..	56,500	70,000	68,000	70,000	
Government presses ... ..	4,15,000	3,76,000	4,16,000	3,88,000	Estimate of the Superintendent of Stationery.
Stationery supplied from Central Stores ... ..	6,11,500	7,70,000	7,70,000	7,00,000	
Printing at private presses ... ..	500				
Refunds ... ..	500	1,000	1,000	1,000	
Total ... ..	12,60,000	13,76,000	14,14,000	13,16,000	

32. *Miscellaneous—*

HEADS.	Actuals, 1893-94.	Budget estimates, 1894-95.	Revised estimates, 1894-95.	Estimate, 1895-96.	REMARKS.
1	2	3	4	5	6
Contributions, ... ..	Rs. 12,000	Rs. 12,000	Rs. 15,000	Rs. 13,000	Based on the average outlay during 1893-94 and 1894-95 for maintaining and working telegraph lines between Demagun and Chittagong and Dumka and Rampur Hat.
Travelling allowances to Covenanted and Uncovenanted Officers attending examinations ... ..	3,000	4,000	3,000	3,000	
Rewards for proficiency in Oriental languages, and allowance to Language Examination Committee. .	9,000	6,000	7,000	8,000	
Cost of books and publications ... ..	1,000	1,000	1,000	1,000	
Donations for charitable purposes ... ..	95,000	1,00,000	1,10,000	98,000	The increase in 1894-95 represents the additional grant sanctioned for the repairs to the Alms-house, Calcutta.
Charges on account of European vagrants ... ..	5,000	5,000	5,000	6,000	
Rewards for destruction of wild animals ... ..	19,000	18,000	18,000	19,000	
Petty establishments ... ..	40,000	29,200	29,000	30,000	Decrease under khedda establishment owing to the reservation of the Western Duars of Jalpaiguri for the future operations of the Imperial Khedda Department.
Special commissions of enquiry ... ..	.....	19,000	5,000	10,000	Provision made to meet expenditure that may occur during the year.
Rents, rates and taxes ... ..	68,000	24,000	34,000	34,000	The actuals of 1893-94 included a special adjustment of Rs. 30,517 paid to the descendants of Khajah Anwar Shahid of Burdwan on account of annuities for the maintenance of his tomb. It has been decided to treat these charges as rents instead of pensions.
Miscellaneous and unforeseen charges ... ..	13,000	11,000	9,600	12,500	
Miscellaneous refunds ... ..	16,000	4,000	4,000	4,000	
Magistrates' miscellaneous contract contingencies... ..	.....	.....	.....	1,500	
Irrecoverable temporary loans written off ... ..	5,000	..	5,000	4,000	Based on actuals. The actuals of 1893-94 include Rs. 11,739, representing refunds of percentage for treasury establishments, excess recovered from District Funds, and District, Road Funds.
Total ... ..	2,86,000	2,27,000	2,15,000	2,41,000

## THE LEPERS BILL.

The Hon'ble Mr. BOURDILLON moved that the Report of the Select Committee on the Bill to provide for the segregation of pauper lepers and the control of lepers exercising certain trades be taken into consideration in order to the settlement of the clauses of the Bill.

The Motion was put and agreed to.

The Hon'ble Mr. BOURDILLON also moved that the clauses of the Bill be considered in the form recommended by the Select Committee. He said:—

“The Bill is before hon'ble members, and unless any member proposes to discuss any particular section, I understand that the procedure will be that the Bill will be passed as it stands, subject to the verbal amendment which I am about to propose.”

The Motion was put and agreed to.

The Hon'ble Mr. BOURDILLON moved that sub-section (2) of section 4 of the Bill be omitted. He said:—

“On the last day that the Bill was before the Select Committee, the Hon'ble Mr. LYALL drew attention to the fact that this sub-section (2) was mere surplusage, and was not required. The Select Committee were anxious that their Report should be submitted without delay, and they therefore allowed the sub-section to stand on an undertaking being given by myself that an enquiry would be made as to the genesis of it. The whole section 4 was adopted from section 3 of a Bill drafted by the Government of India of 1889, and I therefore referred to the Home and Legislative Departments of the Supreme Government to ascertain what the meaning of the sub-section was. It was explained that this section probably referred to certain local Acts applying to the North-Western Provinces and Oudh only, and, as far as could be seen, it would have no application in this province. The Secretary to this Council has verified this statement by looking through our Statute Book, and as he finds that this sub-section is without meaning in Bengal, and has no application here, I therefore move that the sub-section be omitted.”

The Motion was put and agreed to.

The Hon'ble Mr. BOURDILLON also moved that the Bill as settled in Council be passed.

The Hon'ble Mr. GHOSE said:—“I wish to ask your Honour whether there would be any objection to extend the scope of section 12 of the Bill, so that lepers engaged in certain trades and callings might be prevented from doing so, not only within municipal areas but also in rural areas. It is a matter of great importance that such persons should not be allowed to trade in articles of food or any trade or calling of the kind contemplated in the section, and I merely throw this out as a suggestion whether it would not be advisable to provide for such extension.”

The Hon'ble Mr. BOURDILLON said:—“I have only to say in reply that on a former occasion I declared that the policy of the Government was that the operation of that part of the Bill which refers to lepers who are not pauper lepers should be confined to municipalities. I am somewhat at a loss to know how persons carrying on a trade or calling in places which are not municipalities are to be controlled. There will be no municipal bye-laws in such places, and I do not quite understand with what machinery my hon'ble friend proposes to carry out the provisions of these sections. In the absence of any municipal body and any bye-laws, the Magistrate will either pass executive orders which must be enforced by the Police, an expedient to which objection is sure to be taken, or the law will remain a dead-letter.”

The Hon'ble THE PRESIDENT said:—"I am glad to welcome the suggestion just made by the Hon'ble Mr. GHOSE as a proof that he approves the general principle which we have attempted to embody in this Bill. We have, as the Hon'ble Mr. BOURDILLON has stated, confined the operation of this part of the Bill to municipal areas, but if it is found at any future time that practical measures can be suggested for extending it to rural areas, and if suitable authorities can be found who can be trusted to carry it out, it will be a fortunate thing if the hon'ble is still a member of this Council and is able at any future time to introduce a measure of legislation in this direction. I fully recognise the desirability, on purely abstract ground, of such extension, but I agree with the Hon'ble Mr. BOURDILLON that it will be impossible at the present stage of this Bill to carry out the suggestion. It is also always desirable to introduce changes of this kind in a gradual and tentative manner. We shall try it, at first in Calcutta and in other municipalities under the eyes of the public and under strict supervision, and if we find that it works satisfactorily, then there may be good grounds for extending it to rural areas; and if any portion of the procedure should require alteration, we shall have the advantage of the experience which has been here gained before extending it elsewhere.

"Turning to the general object of the Bill, which I am gratified to find has the unanimous approval of the Council, it is only necessary to say in a brief way what the procedure of the Government will be on this Bill being passed into law and after it has received the sanction of the Governor-General in Council. A site has already been selected by a Committee who took great pains and deserve our warm thanks for the trouble they took in examining a large number of sites in and around Calcutta. The site which has been selected seems to approve itself to all persons who have visited and examined it, and who agree in pronouncing it to be a most suitable site for a leper asylum. The difference between the new asylum and the present one will be that the former will be a place of compulsory residence, for pauper lepers will not be allowed to leave the asylum whenever they like, whereas they are at present allowed to leave at their pleasure. The asylum in Amhorst Street was a very good one under existing arrangements and so long as it was not a compulsory place of abode for lepers, but now that we are able to secure their attendance by compulsion, we need pay less regard to the condition that the place should be one which would be popular, which would be near the markets and centres of traffic, and conveniently situated for begging. Those are the very circumstances which have led to the passing of this Bill, and the proposed site is one which lends itself with great facility to the imposing of compulsory segregation. We propose to part with the present asylum, to sell it and to use the funds obtained in this way to recoup the Government the cost of building a new asylum on the new site which has been selected. The price of the new ground will for the most part be met by the subscriptions which were raised in honour of the visit of our lamented Prince Albert Victor, which would be made over by the Committee who collected them for this purpose. We shall have to appoint Inspectors of Lepers and a Board, who will pay monthly visits and examine the asylum.

"The Board will be composed of the principal medical men of Calcutta, in whose judgment and discretion the Government and the public will have confidence that no undue severity will be used. The treatment of lepers is a subject which is still open to very much doubt and discussion, and it will be undesirable that any measures of extreme stringency should be carried out beyond those which the majority of scientific men agree to be desirable, and which the conscience of the public will justify. I am, I believe, justified by the sense of this Council in thinking that we have in this case hit upon the happy means, and that we shall find that this Act will work well both for the benefit of the unfortunate lepers themselves as well as to the advantage of the community at large, who are in danger of contagion by the proximity of persons who suffer from this horrible disease."

The Motion that the Bill be passed was put to the vote and agreed to.

## THE CALCUTTA AND SUBURBAN POLICE ACTS, 1866, AMENDMENT BILL.

The Hon'ble SIR JOHN LAMBERT moved that the Report of the Select Committee on the Bill to further amend the Suburban Police Act, 1866, and the Calcutta Police Act, 1866, be taken into consideration in order to the settlement of the clauses of the Bill.

The Hon'ble MAULVI ABDUL JUBBAR, KHAN BAHADUR, said:—"As a member of the Select Committee I desire to make a few observations on the Bill now before the Council. It must be admitted that there exists in Calcutta the evil which the Bill proposes to deal with, and which ought to be put down by legislation. The Bill, as the Council is aware, was introduced at the instance of the Social Purity Committee, composed of gentlemen who have at heart the moral improvement of the citizens of Calcutta, and who deserve every legislative assistance in carrying out their laudable object. No one will deny that solicitation to immorality is an act of gross misconduct, and much more so when it is done in a public place. Everybody interested in the well being of the Society should vote for the punishment of the offence, and as far as I know there is no opposition to the offence being made punishable, but the objection is mainly against the investment of the police with power to pounce upon such offenders. A human law is not like a law of a nature that a breach of it should inevitably bring about the penalty as a matter of course. All human laws require human agency to carry them out, and Government must provide that agency. Accordingly Government has organised the police for the execution of the penal laws. Therefore the police must possess certain powers to bring offenders to justice. If the police are not to have the limited power which section 5 of the Bill contemplates to confer on a selected few, the law will be inoperative,—a dead letter. Immoral men and women know the people whom they should address, and naturally those accosted by them are rather amused than annoyed, but it is the innocent inhabitants and passers by whose moral feelings are hurt by the indecent proposals made in their hearing. These persons, rather than those solicited, require the protection of the police. I do not mean that the police are immaculate or incapable of dragging innocent persons into court, but if that be the reason for withholding from them the power of arrest under the present Bill, it is equally applicable to all cases in which the police are to be employed.

"In my humble opinion if there is any case in which the power of the police is to be innocuous, it is the case of offence punishable under this Bill. There will be no danger to respectable women from the power of arrest given by this Bill, especially in a country where the zenana system prevails and where extreme modesty in the fair sex is the sign of respectability and good breeding. Here respectable females do not promenade the street in a manner that would render them liable to arrest. The police have already got the power of arresting drunken men and women in the street, but I have not seen in my long experience a single case in which a respectable woman was brought up by the police on a charge of being drunk and obstreperous. I can say that the police seldom abuse their power in cases in which they act solely on their own responsibility, but they are often mischievous in cases in which they are sure to be supported by false complaints and lying witnesses. If they are to exercise their power of arrest under the present Bill only on complaints it will, I am afraid, raise a crop of false and vexatious prosecutions. Disappointed lovers will not unoften wreak their vengeance upon women who may have moral strength to set their faces against improper addresses. With these marks, sir, I would support the Bill as amended by the Select Committee."

The Motion was put and agreed to.

The Hon'ble SIR JOHN LAMBERT also moved that the clauses of the Bill be considered in the form recommended by the Select Committee. He said:—

"It will be seen that the Select Committee have introduced one modification of importance into the Bill as originally drafted. The original Bill contemplated the punishment of mere solicitation to immorality in a public place; but it has

been justly pointed out that acts of immorality such as those to which the Bill refers are not in themselves an offence under the law, and that solicitation to commit such acts ought not by itself to be made punishable. The Select Committee therefore decided to adopt the wording of the English law in this respect, and have inserted the words 'to the annoyance of the inhabitants or passers-by,' after the word 'immorality' in sections 2 and 5 of the Bill. The Bill as it now stands, is therefore substantially identical in this part of the wording with that of the English law on the subject, which runs as follows:—'Every common prostitute or night-walker loitering or being in any thoroughfare or public place for the purpose of prostitution or solicitation to the annoyance of the inhabitants or passengers . . . shall be liable to a penalty of not more than forty shillings, and it shall be lawful for any constable belonging . . . to the Metropolitan Police Force to take into custody without warrant anyone who shall commit any such offence within view of any such constable.' The points of difference are these: First, under the English law, imprisonment is not an alternative penalty. We have proposed imprisonment in this Bill in order to meet the case of male touts who are the chief offenders in Calcutta. Secondly, the English law empowers any constable to arrest, but looking to the constitution of the police in India, we have proposed that the power of arrest should be limited to 'any police officer above the rank of native constable, and such other officer as the Local Government and the Commissioner of Police may appoint in that behalf.' Thirdly, in England every prostitute loitering or being in any thoroughfare or public place for the purpose of solicitation is liable to arrest. The police have no occasion to wait for any overt act of solicitation, and in this respect the Bill now before us does not go as far as the English law. We have also inserted other safeguards to prevent abuse. The arrest is illegal if the name and address of the offender be known to the police officer, or can be ascertained by him then and there. I am glad to find from the letter of the Rev. Mr. Ashton, who addressed the Select Committee on the subject while the Bill was under consideration, that he expressed himself, on behalf of his Committee, as satisfied that the safeguards embodied in section 5 of the Bill ought to disarm apprehension of serious abuse. I do not think I need detain the Council with any further observations regarding this Bill. I can say with confidence on behalf of the Police of Calcutta that its provisions will be administered with moderation and discretion, and I am equally sure that the sagacity and sound judgment of the magistrates of this city will ensure that each case laid before them will be dealt with in a manner which will at once suppress the evil, and also give satisfaction to the public.

"I have once more to say to the Council that this is not a Bill which the executive have applied for to increase its own powers; it has been brought forward by the Government in response to an agitation on the subject by an influential section of the Calcutta public, and the Government are satisfied that it is calculated to afford a remedy for an acknowledged evil which cannot be effectually dealt with by the law as it now stands, and they consider that no measures short of those contained in the Bill will attain the desired object."

The Hon'ble Mr. GHOSE said:—"The object of the amendment which stands in my name and which I now move is to state in clear and definite terms the class of persons with whom the police will be empowered to deal under this measure. If you retain the present wording of the Bill, I am afraid it will open a very wide and dangerous field for the operations of the police, for in that case persons who do not belong to the classes aimed at will also be at the mercy of an unscrupulous police officer who may choose to say that he or she was soliciting some other person to immorality, and it will also be seen from the words of the Metropolitan Act which have been just read by the hon'ble member in charge of the Bill that my amendment is in exact conformity with English legislation on the subject. At the time of the case of Miss Cass, which created considerable sensation, it was pointed out by the Law Journal that the section of the Metropolitan Police Act, and of every other English, Scotch and Irish Act which provides against nuisances in the public streets, contains a number of clauses, all of which, with one single exception, deal with the general public; but the clause which deals with this particular subject does not

refer to the general public at all, but expressly provides that action is to be taken by the police only in the case of prostitutes and night-walkers who may be guilty of this offence. The result is that it is a condition precedent to such a charge that the person accused must be known to the police as a prostitute or a night-walker. The law therefore as it prevails in England is not directed against all Her Majesty's female subjects, but only against those who belong to a particular class, and I submit that this Council cannot do better than follow the analogy of the law of the United Kingdom, and state in express terms the class of persons with whom you intend to deal. With that object I move that in line 7 of section 2, the words 'Any prostitute or tout who' be substituted for the word 'Whoever.' I desire to add one word by way of explanation. In the English Act we have the expression 'night-walker.' Fortunately we have here no class of persons corresponding to that term, but we have, on the other hand, a class of persons who are in the habit of touting for prostitutes, and I therefore substitute the word 'tout' for 'night-walker;' and as I understand the main object of the Bill is to deal with such persons, I trust my amendment will be accepted."

The Hon'ble Mr. COTTON said:—"I think the amendment proposed by my hon'ble friend is calculated to create some embarrassment and possibly to defeat one of the main objects with which legislation has been introduced into this Council. My hon'ble friend raised this proposal in Select Committee, and it was then considered, and the majority of the Committee were of opinion that the expression 'whoever,' which the Bill contains, comprising all sections of the people in the most general terms, was better adapted to meet the object of the law than any definition confining it to a particular class of persons. There can be no doubt that if my hon'ble friend's amendment is accepted, any one who is prosecuted under this section will in the first instance call for proof before the Magistrate, that is to say, the burden of proof will lie on the prosecution to show that he or she is a tout or a prostitute. And although the difficulty of proving a woman who accosts a man in the street to be a prostitute is not likely to be considerable, yet in the case of touts the difficulty is likely to prove very great indeed. A policeman may be perfectly sure that the rascal concerned is an actual tout, but when he is put to strict proof he may easily be nonplussed, and I apprehend that if the amendment is carried, the law, so far as regards touts, will become a deadletter. The law as drafted by the Select Committee applies in general terms to all who solicit to immorality and cause thereby annoyance to the public, and although it is the case that the law when given effect to will practically apply to prostitutes and touts exclusively, there seems no objection to the general expression which is embodied in the draft Bill as it stands before you. If any other person than a tout or a prostitute should commit the offence contemplated by the Bill, I see no reason why he or she should not be punishable in the same manner as though a tout or a prostitute had committed the offence. Such cases will no doubt be exceedingly rare, but they may arise. The difficulty of proving a man or a boy to be a professional tout will be very great, and I for one am of opinion that the acceptance of the amendment will render the provisions of the Bill inoperative."

The Hon'ble SIR CHARLES PAUL said:—"I entirely support this amendment, and I am not persuaded by what has fallen from the Hon'ble Mr. COTTON as to the propriety of the word 'whoever' standing in the Bill. We are dealing with certain vices likely to be committed by certain classes of people. We have nothing to do here with the community at large. We are dealing with the particular cases of prostitutes and touts, and I see no reason why, when dealing with such cases, we should not name them." Then, as to the question of proof, I can only say that any vigilant policeman must pretty well be aware of who the touts and prostitutes are in and about the locality where he is located, and there can be no difficulty in proving that a certain woman is a prostitute and a certain person is a well-known tout. The object is to prevent annoyance to persons of the nature of this description, and the law should be so worded as to prevent mistakes by referring to touts and prostitutes in such a manner that the object of the law will be at once known."

The Hon'ble Mr. BEIGHTON said:—"I think, for very much the same reasons as those adduced by the Hon'ble Mr. COTTON, that this amendment should not be accepted. The word 'tout' does not occur in the Bill nor in the English Act, on which the Bill professes to be founded, nor has it received any judicial interpretation, and I think that if that word is used, it will create many difficulties in bringing home offences. The word 'whoever' is no doubt a sweeping word, but I cannot see why any person, whether a prostitute or a tout, or any other, should not come under the provisions of this Bill if he commits the offence against which this Bill provides. We are proposing to legislate against an offence—not merely against the classes who are most frequently guilty of the offence. There is no difficulty in understanding what the offence is, but if we define the classes to whom the Bill is to apply, there may be considerable difficulty in proving that a particular individual belongs to those classes. I think that to limit the scope of the Bill to prostitutes and touts will, to a great extent, render the provisions nugatory."

The Hon'ble Mr. BONNERJEE said:—"I support this amendment. The difficulty which has been pointed out by the Chief Secretary and the Legal Remembrancer seems to me to have no existence at all. The word proposed to be inserted is 'tout' simply, and not the words 'professional tout'; therefore if any person on behalf of a prostitute by words or signs or gestures solicits another person to immorality, he for the time being becomes a tout for such particular prostitute, and not for prostitutes in general; therefore I do not see the difficulty of prosecuting him on a charge of touting if he commits the act described. My principal reason for supporting this amendment is this: I am not aware of any legal definition of the word 'immorality.' The section runs thus:—"Whoever in a public place solicits any person to immorality." What is the meaning of the word 'immorality' as used there? I do not know of any definition of immorality in the English law books or in the Indian Acts. The dictionary meaning of the word is 'an act or practice which contravenes the Divine commands or a social duty: injustice, dishonesty, fraud, slander, profaneness, gaming, intemperance, lewdness, are immoralities.' That is the definition as given in Ogilvie's Imperial Dictionary, edition 1874; and unless you connect immorality with some other words, so as to show that you mean sexual immorality, it will be almost impossible to prevent an over-energetic policeman, fraught with zeal in his opposition to heathenism, from arresting a person who to the annoyance of another over-energetic person solicits such person to go to Kalighat to worship at the shrine of Kali on a charge of soliciting to immorality. Take another instance of a person who in the presence of a policeman and to the annoyance of the inhabitants in a public place addresses slanderous words with regard to somebody else. Slander is immorality, and therefore the policeman may immediately arrest him and take him before a Magistrate and may get him fined fifty rupees, or sentenced to imprisonment for eight days. I apprehend that it is not the object of the hon'ble member in charge of the Bill to bring about such a result. You must therefore limit the meaning of the term 'solicits to immorality' by some reference to prostitutes and touts, and I think my hon'ble friend's amendment exactly meets the case; but if you leave the section as it stands, it will lead to very great abuse."

The Hon'ble MAULVI MUHAMMAD YUSUF, KHAN BAHADUR, said:—"As a member of the Select Committee who signed this Report, I submit that the arguments which have been advanced in favour of the amendment are not such as to commend the amendment to the acceptance of the Council. The arguments advanced by the hon'ble member who last spoke amount to this, that it is necessary that some words should be used in this section which should point to the particular immorality contemplated or intended by this section. Now I submit that a fair and unbiassed reading of this section, bearing in mind the admitted scope and object of the measure, ought to lead a reasonable mind to the conclusion that the immorality referred to in section 2 is nothing but sexual immorality, and therefore I submit that it is not necessary for other words to be introduced in this section with the object of making it clear and manifest with what intention the word immorality

is used. As regards the amendment itself, I submit that for the very reasons which the hon'ble mover of the amendment has assigned in favour of the amendment, that amendment should not be accepted: if the amendment is accepted, then the offender must be proved to be already a prostitute or tout, as the case may be, and the result will be that a novice or one who has just commenced to be initiated, and who has not become a full-fledged prostitute or tout, will not be liable; but I do not see why the operation of the Act should be so restricted and why there should be a period of probation and immunity. Even if the offence is committed by a person who for the first time is beginning to act as a tout, or who might not have practised prostitution before, I do not see why that offence should not be taken cognisance of under this Bill. If the main object of the amendment is to see that a police officer shall not be vested with powers which he might be tempted to abuse, then such object is safe, regard being had to the words which have already been added by the Select Committee. It was considered by the Select Committee that the addition of words 'to the annoyance of the inhabitants or passers-by' will afford a sufficient safeguard against abuse, and I submit that no reasonable ground exists any longer for the apprehension that the power of arrest will be used for purposes for which it is not intended."

The Hon'ble Mr. SMYTH said:—"I wish to say one word in favour of the amendment. It seems to me that this Bill confers very great powers upon the police." It is a Bill for a special purpose, and it seems to me that the amendment just provides what is required. The Bill is directed against a certain form of immorality, and the amendment proposes to limit its operation to prostitutes and touts, and I am very strongly of opinion that the Bill should not go beyond that. Personally I think we should all feel that it would be a very bad thing if one innocent person is brought up under the provisions of the Bill, even if fifty prostitutes and touts were to escape."

The Hon'ble Mr. LYALL said:—"The hon'ble mover of the amendment has based his amendment on the analogy of the English Law. But the offence which will be punishable under this Bill has nothing to do with the English Act. The offence is the overt act of solicitation, and I can see no reason whatever why a person who commits that overt act should only be punishable if he or she is first proved to be a tout or a prostitute. Under the English Act the offence is committed by a common prostitute going about the streets. No solicitation is required, and therefore the gist of the offence under the English Act is the character of the person who commits the act, but the gist of the offence under this Bill is the act committed."

The Hon'ble Sir JOHN LAMBERT said:—"The real point is whether the omission of the words proposed by the amendment is likely to cause injustice, and will their insertion act as a proper safeguard? It appears to me that no danger need be apprehended to an innocent person from the Bill as it stands. As the Hon'ble MAULVI ABDUL JUBBAR has said, he has seldom known an instance in which the police have gone wrong in a case of this kind when left to themselves. As regards the public women the police know perfectly well who they were, but as regards touts, although they knew who are touts, there may be some difficulty in proving it, and therefore I think it will be better to leave the Bill as it stands."

The Hon'ble THE PRESIDENT said:—"In dealing with a question of this kind where no important change of principle is involved, but where a suggestion is made to make a slight alteration in the wording with a view to avoid a possible danger or of effecting a possible improvement, I feel strongly that the Council should be bound to a great extent by the action of its Select Committee, and I say this specially with reference to what has fallen from the hon'ble member who has addressed us for the first time just now (Mr. SMYTH). I feel that unless the Council reposes confidence in the Select Committee, except where very good reason is found for not supporting their action, we may find it very difficult to get hon'ble members to go through the laborious work of examining

draft Bills and of improving and correcting them as they do now in Select Committee. I think the present question is one of this kind. I do not consider that the words suggested by the amendment will be destructive of the principle of the Bill, nor do I think they will effect any considerable improvement, but the arguments used in their favour seem to me on the whole more hostile to the Bill than anything which has not been said, and which may occur to hon'ble members.

"I always feel considerable diffidence when my views are opposed to those of the hon'ble the Advocate-General, whose long experience in this Council is unsurpassed, but I think he can hardly have noticed what the Hon'ble MAULVI MUHAMMAD YUSUF alluded to, namely that, though the amendment did not suggest the idea, the speech of the hon'ble member who moved the amendment showed that he intended it so to act as to throw considerable difficulty or considerable delay in effecting what the Council desire to effect. He considers that the effect of the amendment will be that no person could be arrested by the police unless he had been for a long time on the streets, or a long time acting as a tout, and become personally known to the police; that we are to treat these abominable people as if they were foxes and give them a fair run; that every one of them was to get at least a month to practise immorality, and it is only after they have been corrupting the public and our young men for some considerable time that we are to allow the Police to interfere. This shows how disastrous would be the result if the proposed amendment were to become law.

"Then, with regard to the observations which fell from the Hon'ble Mr. BONNERJEE in his entertaining speech on the dictionary meaning of the word 'immorality,' I think he could hardly have intended us to take his speech seriously, because I think no member of this Council can conceive the possibility of the police arresting any one under this Act for asking another to go to worship at Kalighat, or for uttering slander against any one in a public place. The instances he gave are so far-fetched and so ludicrous that it shows that the arguments he put before us could hardly have been intended to be seriously considered. I feel therefore bound to advise the Council not to accept the amendment which is now before us."

The motion being put, the Council divided:—

*Ayes 8.*  
 The Hon'ble Mr. Smyth.  
 The Hon'ble Mr. Womack.  
 The Hon'ble Mr. Bonnerjee.  
 The Hon'ble Maulvi Serajul Islam Khan Bahadur.  
 The Hon'ble Mr. Ghose.  
 The Hon'ble Babu Surendranath Banerjee.  
 The Hon'ble Mr. Dutt.  
 The Hon'ble Sir Charles Paul.

*Noes 9.*  
 The Hon'ble Maulvi Muhammad Yusuf Khan Bahadur.  
 The Hon'ble Mr. Beighton.  
 The Hon'ble Mr. Buckland.  
 The Hon'ble Mr. Collier.  
 The Hon'ble Maulvi Abdul Jubbur Khan Bahadur.  
 The Hon'ble Mr. Bourdillon.  
 The Hon'ble Mr. Lyall.  
 The Hon'ble Sir John Lambert.  
 The Hon'ble Mr. Cotton.

So the motion was lost.

The Hon'ble BABU SURENDRANATH BANERJEE said:—"It has been suggested to me by the Hon'ble Mr. COTTON that the Government would be prepared to accept the amendment which stands in my name, subject to this modification, namely, that I should introduce the plural form as regards the words 'inhabitant or passer-by;' so that the amendment would run thus:—"that in line 4 of the second paragraph of section 2, the words 'person solicited or of two or more of the inhabitants or passers-by' be substituted for the words 'inhabitants or passers-by.'"

The Hon'ble SIR CHARLES PAUL said:—"The word 'inhabitants' is rather a dangerous word to use: it means not one or two or three, but a fair number of the inhabitants. I merely throw this out for the consideration of the hon'ble member in charge of the Bill."

The Hon'ble Mr. CORTON said:—"The point to which I desire to invite particular attention is, that it is the principle of the Bill that a person should be punishable, not for soliciting to the annoyance of an individual, but to the annoyance of the public; and from that point of view there is very great difference between the wording of the amendment as it was originally drafted by my hon'ble friend and that which he has been good enough to say he is prepared to accept. I entirely concur with the remarks which fell from the Hon'ble MAULVI ABDUL JUBBAR when he dwelt with much force on the valuable provisions of the present Bill in affording protection to the public who are outraged by these solicitations. If we are to depend on the complaint of the individual solicited, or if it were necessary to prove that the person solicited had been annoyed, then I am afraid that the value of the present Bill will be minimised. It is to be assumed, as the Council were told just now, that the offenders as a rule know perfectly well the classes of persons whom they accost, and certainly in many instances the persons accosted are not annoyed, and are not likely to complain of annoyance. It is not for their protection that we have introduced this legislation. It is for the protection of the general public. From this point of view I wish to impress upon the Council the advisability of the provisions of this Bill being worded as in the English law, where the same principle is maintained by the use of the word 'inhabitants' in the plural. There is no difficulty, I apprehend, in determining who are the inhabitants of a locality or who are the passers-by in that particular place. The custom of calling upon the Legislature to define the meaning of words is liable to great abuse. We must depend upon the Courts to exercise reasonable sagacity and commonsense in interpreting words of this nature. I understood the Hon'ble the Advocate-General to say that the word 'inhabitant' should be defined, but I am afraid there will be no end to it if questions of this kind are thrust upon us."

The motion was put and agreed to.

The Hon'ble BABU SURENDRANATH BANERJEE also moved that in line 6 of the second paragraph of section 5, the words "on the complaint of the person annoyed, or of two or more inhabitants or passers-by whose names and addresses shall be ascertained by the police officer" be inserted after the word "may." He said:—

"The section to which this amendment refers was the subject of considerable debate when this Bill was referred to a Select Committee. I will not repeat those arguments on the present occasion. It is not necessary to do so. I should have preferred if this section were altogether abandoned, and if solicitation to immorality were declared to be an offence, and the rest of the Bill were dropped. I am aware of the objection to this course. It has been said that if this were done the Bill would be inoperative. It would be operative when the person injured chose to complain, otherwise not. Is it not the case with regard to a large class of offences that they are not cognizable by the police? The person injured sets in motion the machinery of the law, and the law becomes operative. We are legislating for the first time in regard to a new matter altogether, and it is of the first importance that we should so legislate that the law does not operate with severity upon the people. I would place this class of offences in the category of non-cognizable offences. I am unwilling to add to the powers of the police, even for so laudable a purpose as the promotion of social purity; for I fear it would lead to abuse and would be used as an instrument for levying blackmail.

"I claim for my amendment that it is supported by the Association at whose instance this legislation has been undertaken. They have not left us in the dark as to their views. We have a letter from the Rev. Mr. ASHTON, the Convener of the Committee of the Social Purity Association. I will read the last paragraph of his letter. He there says:—

"The Committee feel the force of the remarks that have been made as to the possible working of section 5 of the Bill, but they think that section 2 will be practically inoperative without some such provision as is contained in section 5, while the safeguard imposed in that section ought to disarm the apprehension of serious abuse, especially if the section be so far modified as to make arrest lawful only at the instance of the person solicited."

"The Committee recommend the safeguard which is embodied in my amendment. They suggest that the section be so far modified as to make arrest lawful only at the instance of the person solicited. That is the gist of my amendment. The person solicited must complain, and then only will the police arrest. If we make this concession we satisfy the demands of public opinion, and at the same time conform to the views of the Social Purity Party. I am afraid that without some such safeguard this section will be converted into an engine of oppression, and an instrument for the purpose of levying blackmail. I am free to acknowledge that the Government is actuated in this matter by the purest of motives, and that it is entitled to command in an unstinted degree the co-operation of public opinion. My amendment seeks to bring about this result and to enlist public opinion on behalf of this measure by reconciling the interests of social purity with those of personal liberty."

The Hon'ble MR. BEIGHTON said:—"I desire, like the Hon'ble Mr. Cotton, to associate myself with much that has fallen from the Hon'ble Maulvi Abdul Jubbar. It is impossible not to respect the motives of those who have taken the initiative in this matter or to withhold sympathy from their conscientious efforts in the cause of morality and social purity. I will go further and admit that though the evil against which we are asked to legislate has not attained in Calcutta anything like the serious and scandalous proportions which it has reached in London and some continental capitals, still it is clear from what was said by the Hon'ble Sir John Lambert when he introduced the Bill, and from the observations he has made to-day, that there are areas in Calcutta where public propriety is scandalized by open solicitations to immorality, and, to check this evil, legislation is undoubtedly demanded.

"But while I concede so much, it must not be lost sight of that the Bill not only creates in this country a new offence, but it introduces a novel procedure. Speaking very generally, the power of the police to arrest without warrant and without complaint is restricted to heinous offences and offences against the public tranquility. The new offence defined by this Bill certainly does not come within either of these classes. It has been contended by the hon'ble member in charge of the Bill that reasonable precautions against misconduct on the part of the police have been taken by limiting the exercise of the power conferred on the police by the Bill to an officer 'above the rank of police constable.' This provision would, I suppose, allow any European constable to take action under section 5 of the Bill. If so, it goes very far, as I shall hope to show presently, beyond the ordinary Municipal Law of England. Then, again, there is no restriction whatever as regards the rank of the 'other officer,' whom the Local Government or the Commissioner of Police may empower under the Act. This also is a point, as it appears to me, worthy of notice in considering the sufficiency of the safeguard introduced into the Bill.

"When I read the debate which took place in this Council on the occasion of the introduction of the Bill, I must confess I shared, and still share to some extent, the misgivings to which eloquent expression was given by the hon'ble mover of the present amendment and the Hon'ble Mr. Ghose. Without going so far as to anticipate the wholesale blackmailing and oppressive treatment of the poorer classes of the community, I do think that the Act may occasionally be used as a means of extortion, and my fears on this head are by no means allayed by the arguments we have heard to-day from the Hon'ble MAULVI ABDUL JUBBAR. The hon'ble member spoke of the immunity from arrest or annoyance that the zenana system conferred upon respectable native females. But has the hon'ble member forgotten that there are other females of a humbler class, whose avocations compel them to pass through the streets of Calcutta, even at night, with perfectly innocent motives? I cannot but fear that though there may be no such widespread mischief as the Hon'ble Mr. Ghose has prophesied, there may be, if no additional safeguard be introduced into the Bill, some individual cases of extortion, and that scandals may in isolated instances occur which may reasonably shock the whole community.

"The Council will perhaps permit me to detain them while I make some observations on the law as it exists in England and in other countries. If I understood the hon'ble mover of the Bill rightly, he said in his introductory speech that the police possessed in England the same power as it is proposed to

confer upon them by this Bill, and both he and the Hon'ble Mr. Cotton referred to the words of section 54, 2 and 3 Vic., Chapter 47, as the foundation for the Bill. I must confess, however, I am surprised to find that neither of the hon'ble members seem to be aware that this Act is in force only in the metropolis. The law as regards all the other Municipal Corporations in England is contained in the 'Towns Clauses Consolidation Act' section 28 of which renders punishable every common prostitute or night-walker loitering and importuning passengers for the purposes of prostitution. This Act, however, contains no provision as to how the law is to be enforced, but merely defines the offence. That provision is to be found in section 253 of the Public Health Act of 1878; and not to detain the Council by unnecessary reference to technical details, I may say at once that no cognizance can be taken by the Police of the offence defined, nor can they arrest or prosecute any offender except on the complaint of some person aggrieved. This is the law as regards ordinary municipal boroughs in England, and it is well that the Council should note that we are proposing to confer upon the police of Calcutta exceptional powers which exist in England only for the government of the metropolis. Even in the metropolis it is a matter of common notoriety that a Police Magistrate will not convict on the uncorroborated evidence of a police constable. The case of Miss Cass, which has been so often referred to, is not an illustration of the imperfection of the law as it stands, but rather a proof of its inadequacy to prevent an occasional instance of oppression and a forcible example of the mode in which an unscrupulous police constable may, under colour of the law, act in defiance of its provisions.

"The law in other countries, so far as I have been able to ascertain, is very much the same as in the municipal boroughs of England. In America all or nearly all the State Legislatures have enacted that no police officer can arrest, and no complaint can be entertained in the Police Courts except at the instance of some one who has been aggrieved and who publicly comes forward to state that he has been aggrieved. In Germany the law is the same, while in Italy the power of interference is still more restricted. No police officer has the right to arrest any person for soliciting to immorality whether a complaint is made or not. The person aggrieved must himself lodge a complaint before a Magistrate. An attempt to legislate for the towns of Rome and Naples on something like the lines of the present Bill was defeated in the Chamber of Deputies.

"This summary, brief as it is, is, I trust, sufficient to show the Council that any powers conferred upon the police to interfere in cases of solicitation are regarded throughout the civilised world with great distrust. But while I am bound to say that I cannot vote for section 5 of the Bill as it is drafted, I do not think the Council ought to accept the amendment now under discussion.

"I entirely concur with what has been urged by the Hon'ble the Chief Secretary and the Hon'ble Sir John Lambert, both to-day and during the former debate, that if the person solicited or any other person is to be compelled to give his name and address before any complaint as to solicitation can be recognized by the police, the provisions of the Act will be rendered altogether nugatory. The publicity attending such a provision would practically deter either the person solicited or any member of the public who was present from coming forward and complaining of any solicitation either addressed to him or which took place in his presence. But this is a very different thing from saying that no complaint ought to be made. We have been told several times in this Council that the Bill is framed in the interests of the public. If so, it is surely not too much to expect that some individual will come forward in the interests of the public and make a complaint. I think that a passer-by who might well shrink from giving his name and address need not shrink from putting the machinery of the Bill in motion and claiming the protection of the police when there is no such ordeal to be faced. It may be argued by those who support the more drastic proposal of the hon'ble member that my suggestion would not be a sufficient precaution against extortion. I do not share this apprehension. It would be perfectly well known both to the police and the public that the former could not act otherwise than on complaint of some kind, even if it be a complaint of an unknown person, and this would in practice operate as a check on malpractices. The police would be unable to levy blackmail from prostitutes and their servants without a conspir-

acy which would require at least one confederate, and this would greatly increase the chances of detection; and if any attempt were habitually made by any police officer to secure convictions under this section by falsely alleging that a complaint had been made by some one unknown to him, he would, after a short time, infallibly be detected by his superior officers, and no Magistrate would attach any credence to his evidence.

"I have one more observation to make as to one of the safeguards in the Bill on which stress has been laid by the hon'ble member opposite (Mr. Cotton). The provision for limiting the power of arrest to cases where the offender refuses to give his name and address appears to me illusory, for there is nothing to prevent a dishonest police officer from asserting that the offender refused to give these particulars, whether he did so or not.

"I have been precluded, owing to my very recent appointment as a member of this Council, from giving the usual notice, but I have drafted an amendment to-day which will, I hope, meet with the approval of the Council, and have handed it to His Honour the President. If he permits me to do so, I will move at the proper time that after the word 'may' in the 6th line of paragraph 2 of section 5, the words 'at the instance of any person aggrieved' be inserted. The 'person aggrieved' may be either the person solicited, or any member of the public who was present and was annoyed by the act of solicitation. This is, after all, a small amendment, but I hope the Council, and even the Hon'ble BABU SURENDRANATH BANERJEE, will accept it as sufficient to meet the fears that have been expressed as to the effect of the exceptional powers conferred upon the police."

The Hon'ble Mr. Cotton said:—"I venture to trouble the Council with a few words with reference to the proposal of the Hon'ble BABU SURENDRANATH BANERJEE, and also with regard to the remarks of the Hon'ble Mr. BEIGHTON. I must say that certain of these observations seem to me calculated to mislead the Council as to the powers already exercised by the police in this town. If I understand my hon'ble friend correctly, he laid down the law to be that only in cases of heinous offences and with regard to public disturbances had the police power to arrest without warrant. It appears to me that my hon'ble friend entirely lost sight of a very large number of offences with regard to what are termed nuisances, which are tried by Magistrates. All matters which relate to public nuisances are cognisable by the police. The police may arrest persons committing such nuisances without warrant. The Calcutta Police Act enumerates in section 66 a vast number of offences of that nature, the essence of which is that they cause public annoyance; in other words, that they are nuisances. There is a special section which empowers the police to arrest without warrant persons found drunk or incapable of taking care of themselves, or are guilty of rioting in the streets. Amongst other offences are included the exposing of one's person, exposing sores and wounds, and begging: all these are substantive offences, for which the police can arrest without warrant. The point is this, that any police officer may arrest in the case of such offences without warrant; and it was originally proposed by the Hon'ble BABU SURENDRANATH BANERJEE that the same power of arresting without warrant should be extended to the new offence now created; in other words, that it should be an offence for which any police officer may arrest without a warrant. [The Hon'ble BABU SURENDRANATH BANERJEE said:—"My hon'ble friend will pardon me. I made that statement at a time when I was not aware that the offence was an offence cognisable by the Police."] But as a matter of fact all these offences are cognisable by any police officer, and it was proposed by the Social Purity Association that the offence of solicitation should be added to the offences enumerated in this section of the Calcutta Police Act. That was a step beyond what the Government was prepared to take. There is no doubt that this is a new offence,—this solicitation to commit immorality to the annoyance of the public,—and the Government are most anxious that a new offence of this kind should be safeguarded in such a way as to ensure that the public should be protected.

"With this view various safeguards were proposed, one of which was that the power of arrest should be restricted to a police officer above the rank of native constable, and to police officers specially appointed by the Lieutenant-

Governor or the Commissioner of Police, and other safeguards were added. I lay much stress on this consideration, as I think it cuts at the root of the objection which my hon'ble friend takes to allowing these powers to be exercised by the police. The English Metropolitan Law places this power in the hands of any constable of police. We have not done that. I wish hon'ble members carefully to consider that point. The Government has been most anxious that powers conferred upon the police should not be abused, and I think the Council may accept the assurance of the Hon'ble SIR JOHN LAMBERT that the discretion vested in the police will be judiciously exercised.

"Then, as to the proposal contained in the amendment that cases of this kind should only be taken up on complaint—a proposal which is substantially endorsed by the Hon'ble MR. BEIGHTON when he recommends that cases shall only be brought at the instance of the party aggrieved. I object as strongly to one amendment as to the other. The object of the law is to create an offence which is an offence against the public, not an offence against an individual. This offence comes in the same category as all public nuisances which have designedly been made cognizable by the police, and for which they can arrest without warrant; and as this new offence classes itself in the category of public nuisances, it is legitimately and properly an offence for which the police may arrest without warrant. There is no harm in any one complaining. If an individual is annoyed he can complain; but the police will act as guardians of the public welfare under this law. The public is aggrieved by solicitation, but individual members of the public will not complain in such cases. I cannot imagine myself in the position of a complainant in such a case, and I should be very much surprised if any hon'ble member would go so far as to complain to the police or to a Magistrate of an offence under this section. I think we should leave the power of acting in cases of nuisances of this kind in the hands of the police, who are the custodians of the public welfare. We know from experience that individuals will not complain. It is not the case in Calcutta only, but all the world over, that the person solicited is probably the very last person who will complain. I hope, gentlemen, you will vote against this amendment."

The Hon'ble SIR CHARLES PAUL said:—"I do not understand my hon'ble friend, the Legal Remembrancer, to have desired that an arrest should not be made without warrant, but he desired simply that the arrest should be at the instance of the person aggrieved, in order to prevent any policeman taking malicious or capricious action under this section. My mind has vacillated between the two questions whether there should be a complaint or not; but on the whole I have come to the conclusion that it would be better to have a complaint, and what has convinced me is the second portion of the amendment, of which notice has been given by the Hon'ble MR. GHOSE, namely, that the Magistrate may, when he finds it necessary, require the complainant to appear and give evidence. The Hon'ble MR. COTTON has suggested that the offence with which this Bill deals is an offence which comes under the category of a public nuisance; that the policeman is the guardian of the public welfare. I never knew that before, but we live and learn. He is a gentleman, no doubt, who is employed to keep the peace and to do other things, but I never knew that he was the custodian of the public welfare. Any one of the public should be at liberty to set the Police in motion, but he should not be bound to come forward and give evidence. The advantage of this course will be that it will put an end to the possibility of a policeman acting capriciously or maliciously."

The Hon'ble MAULVI MUHAMMAD YUSUF, KHAN BAHADUR, said:—"When this Bill was being referred to the Select Committee, I suggested that the words 'on complaint' might be introduced in this section, but in the Select Committee certain modifications were made which rendered it unnecessary that the words 'on complaint' should be introduced. The Bill as it stood before afforded every facility for abuse of its powers by the Police, but the words which the Select Committee introduced provided sufficient safeguard against such abuse: the words which the Select Committee introduced were that the solicitation must be '*to the annoyance of the inhabitants or passers-by.*' After the intro-

duction of these words it is unnecessary that there should be a complaint. The section having been thus amended, and for the exercise of the power of arrest it being necessary that the names and addresses of the inhabitants should be known, no urgency exists for a complaint. I shall therefore vote against this amendment.

The Hon'ble MAULVI SERAJUL ISLAM, KHAN BAHADUR, said:—"The object of this amendment is to prevent a police officer arresting a person of his own motion in such a case. By this Bill you are creating a new offence, and are giving additional powers to the police, and therefore it is essentially necessary that there should be some safeguard. I do not think the safeguard provided by section 5 is quite sufficient; and if that is so, I submit that the police ought not to take any action unless on the complaint of the person who has been solicited or of the inhabitants or passers-by. If the gist of the offence is the annoyance caused, how is the police officer to know that annoyance has been caused unless there is a complaint. The complaint would be the test of the annoyance; and therefore I humbly think that the addition of the words proposed in this amendment are very necessary. It was said by the Hon'ble Mr. COTTON that the object of the law is to provide a remedy against a public nuisance. If that is so, what is the test that the conduct of a certain person amounts to a public nuisance? It is a complaint, and unless there is a complaint, it cannot be said that there is any offence at all."

The Hon'ble MR. BONNERJEE said:—"I also support this amendment, and the reason which has been given by the hon'ble gentleman, who has just spoken, is so conclusive that I do not think it necessary to adduce any other reason. I rise chiefly to enter my respectful protest against English law and English Statutes being brought to bear upon the consideration of policy in this Council when those statutes and those laws are of a character which take away from the liberty of the subject; when it is urged on behalf of the people of this country that such and such institutions exist in England, the answer given on behalf of the Government is that the condition of things in England differs entirely from those in India, and therefore you cannot have English institutions given to you. If we are not to have English institutions favouring the liberty of the subject, do not let us have English institutions which do not favour the liberty of the subject."

The Hon'ble THE PRESIDENT said:—"The reasons against requiring the person aggrieved to make a formal complaint have been fully stated on various occasions, and have been stated again on this occasion. I cannot say that anything that has been said has materially altered my view or has led me to think that there should be a complaint. The object in view is to stop the commission of the offence, but we shall weaken the measures taken to stop it if we require a complaint. I do not feel the same objection to the amendment about to be proposed by the Hon'ble Mr. BEIGHTON, namely, that the Police Officer should act at the instance of the person aggrieved. Practically, we know that something of the kind does take place: the Police will not act unless moved by some person who is aggrieved."

The Motion being put, the Council divided:—

*Ayes 7.*

The Hon'ble Mr. Smyth.  
The Hon'ble Mr. Womack.  
The Hon'ble Mr. Bonnerjee.  
The Hon'ble Maulvi Serajul Islam,  
Khan Bahadur.  
The Hon'ble Sir Luchmessur Singh  
Bahadur of Darbhanga.  
The Hon'ble Mr. Ghose.  
The Hon'ble Babu Surendranath  
Banerjee.

*Noes 9.*

The Hon'ble Maulvi Muhammad  
Yusuf, Khan Bahadur.  
The Hon'ble Mr. Dutt.  
The Hon'ble Mr. Beighton.  
The Hon'ble Mr. Buckland.  
The Hon'ble Maulvi Abdul Jubbur,  
Khan Bahadur.  
The Hon'ble Mr. Bourdillon.  
The Hon'ble Mr. Lyall.  
The Hon'ble Sir John Lambert.  
The Hon'ble Mr. Cotton.

So the Motion was lost.

The Hon'ble MR. BEIGHTON said:—"I have already detained the Council for so long a time with the arguments on which my amendment is based that I do not intend to inflict another speech upon them. I have to thank the Hon'ble MAULVI SERAJUL ISLAM for an argument which strengthens the reasons for my amendment, and that is the doubt which the police must feel in ascertaining whether any annoyance has been caused unless some complaint has been made. I have expressly used the word 'instance' instead of the formal word 'complaint' in order that it should be understood that the person making the complaint is not bound to appear and give evidence. I move that in line 6 of the second paragraph of section 5, the words 'at the instance of any person aggrieved' be inserted after the word 'may'."

The Hon'ble MR. COTTON said:—"The objections I took to the Hon'ble BABU SURENDRANATH BANERJEE's Motion apply with equal force to this amendment. In fact, I feel that there is no radical distinction between the two amendments: the difference is the difference between tweedledum and tweedledee! There is no difference between a provision in the law authorising action to be taken by the police on a complaint made and action taken by the police at the 'instance' of the person aggrieved,—whether it is called a complaint, a statement, or a representation I do not care,—but the fact remains that in either case the police will not be able to take action unless some person comes forward and makes a representation to them. I understand from the observation that your Honour dropped a minute ago, that you are of opinion that the police would not act except at the instance of some person who might be aggrieved. With due deference to that opinion, which I do not hold, I would refer to cases of public nuisances in which the police do act on their own authority; in the case, for instance, of a carriage driven on the wrong side of the road or without lights, in such cases the police take up the driver. There is no complaint; the police don't act at the instance of a person aggrieved; they act on general instructions given to them. Again, when a person is drunk and disorderly in a public place, the passers-by do not say 'arrest that person,' but the police arrest him of their own accord. Any police officer may arrest in such cases. In this particular instance, which creates a scandal to the community, it is also proposed that the police shall act on their own authority; but a safeguard is enacted, only the higher officers of police shall be so empowered. To suppose that members of the public will come forward to complain is chimerical, and if this amendment is carried, the law had better not be passed at all."

The Hon'ble SIR JOHN LAMBERT said:—"I entirely agree with what has fallen from the Hon'ble MR. COTTON. It will be useful, I think, for the Council to know what generally takes place in such cases. I have been in Calcutta, in the appointment which I have the honour to hold, for a long time, and I can say that, as a rule, complaint is made not to the subordinate police but direct to the Commissioner of Police. It is made by persons of respectability, and the complaint is that in a certain locality an annoyance of the kind referred to is caused, and the Commissioner of Police is asked to take such steps as will enable the residents to get relief. The Commissioner then places a selected officer in the locality, and instructs him to take steps to stop the nuisance. That is what generally happens. But if the police on duty in the street are to wait until they are called upon by individuals, or by the residents of the locality, or by persons aggrieved, to make arrests, then this Act will assuredly be a deadletter, and it had far better be withdrawn."

The Hon'ble THE PRESIDENT said:—"I trust that the prophecy of the Hon'ble SIR JOHN LAMBERT will not be found to be a truthful one, supposing this amendment to be carried. It must be observed that even the chief supporters of the Social Purity Association, at whose instance mainly the Government has moved in this matter, have supported an idea of this kind, and I confess, in spite of what has been said, that I think the proper and reasonable procedure is that the persons aggrieved should make the first move in the matter, and I am inclined to think they would call in the Police to stop annoyances of the sort, provided it would not result in their having to make an appearance before the Magistrate at some future date. Even granting that this Act becomes

a dead-letter, there will be later opportunities for the Council to enlarge the powers given to the police. If we find that what we have done is insufficient, we can do something more. But in all cases of this kind it seems desirable to step moderately, and not to rush into a new departure. On these grounds, after hearing all that has been said, my personal feeling is in favour of the amendment of the Hon'ble Mr. BEIGHTON."

The motion being put, the Council divided:—

*Ayes 12.*

The Hon'ble Mr. Smyth.  
The Hon'ble Mr. Womack.  
The Hon'ble Mr. Bonnerjee.  
The Hon'ble Maulvi Serajul Islam,  
Khan Bahadur.  
The Hon'ble Maharaja Sir Luch-  
messur Singh Bahadur of Dar-  
bhanga.  
The Hon'ble Mr. Ghose.  
The Hon'ble Babu Surendranath  
Banerjee.  
The Hon'ble Mr. Dutt.  
The Hon'ble Mr. Beighton.  
The Hon'ble Mr. Buckland.  
The Hon'ble Mr. Collier.  
The Hon'ble Sir Charles Paul.

*Noes 6.*

The Hon'ble Maulvi Muhammad  
Yusuf, Khan Bahadur.  
The Hon'ble Maulvi Abdul Jubbur,  
Khan Bahadur.  
The Hon'ble Mr. Bourdillon.  
The Hon'ble Mr. Lyall.  
The Hon'ble Sir John Lambert.  
The Hon'ble Mr. Cotton.

So the motion was carried.

The Hon'ble BABU SURENDRANATH BANERJEE moved that in line 9 of the second paragraph of section 5, the words "person solicited or of two or more of the inhabitants or passers-by" be substituted for the words "inhabitants or passers-by." He said:—

"This amendment is the same as that which has been accepted by this Council on my motion in reference to section 4."

The Hon'ble Mr. COTTON said:—"I cannot agree to this amendment, and would wish my name to appear as opposed to it. I believe it will prove to be an injurious provision in the law."

The motion was put and agreed to.

The Hon'ble Mr. GHOSE said:—"I think it necessary to bring forward the motion which stands in my name for reasons which I shall state. On the last occasion when this Bill was before the Council, several hon'ble members agreed with me as to the dangerous character of the powers which were proposed to be conferred on the police, and I have not heard anything in the Select Committee or in the debates which have taken place to-day which induces me to alter my opinion. On the contrary, the more I have reflected and the more I have discussed the matter with my friends, the more fully am I convinced that it will be dangerous to pass this Act without some more efficient safeguards than are provided in the Bill. No doubt the amendments which have just been carried go to a certain extent to meet the object I have in view, but there is one matter which has been overlooked. A police officer is bound to take action at the instance of some person or persons aggrieved, but unless you also compel him to ascertain the name and address of the persons making complaint, you leave us exactly where we are, because we shall have nothing more than the bare statement of the policeman that some persons complained to him, but he did not know who they were or where to find them. It is absolutely necessary that where a false case is brought against an innocent woman, the police officer should be able to disclose the name and address of the person who set the law in motion. The object of my amendment is not that in every case or in the majority of cases the person or persons who complained should be compelled to give evidence in Court.

"In the vast majority of cases where the offence is committed in the public streets, the persons charged will either be prostitutes or touts; there will be no dispute in such cases; the persons charged will admit the offence, and the whole thing will be over in a minute. But my amendment is intended to meet the case where the woman denies the charge, and where she is able to prove to the satisfaction of the trying Magistrate that she is not a prostitute, but a respectable person. In such cases the Court should have the power to compel the person who is responsible for a malicious and false prosecution to come forward and give evidence. I submit that this is still necessary; otherwise you would leave such innocent persons without any remedy whatever. This class of cases may be very rare, but such cases may occur, and I think a safeguard should be provided to meet them. I still hold that there is no necessity whatever for this legislation, and I respectfully advise some of those who are agitating in this direction to look homewards and to direct their exuberant energies towards the purification of Regent Street and Piccadilly, and a hundred other important thoroughfares in London and in every other large European city compared with which our streets may be regarded as models of purity. However, be that as it may, I submit that if we do pass an enactment such as this, the amendment which I now propose should be accepted, as it will tend to some extent at least to minimise the dangers and the evils which I apprehend. With these remarks, I move that at the end of section 5 the following proviso be added:—

'Provided that it shall be the duty of every police officer taking action under this section to ascertain the name and address of the person aggrieved.

'Provided, further, that the person aggrieved need not attend to give evidence unless required by the Magistrate so to do.'

The Hon'ble MR. COTTON said:—"I most strongly oppose this, as I have done all previous amendments in the same direction. It strikes at the very principle of the Bill, which is to provide for certain offences against the public and not against individuals. A clause of this kind will stultify the Bill, and I hope the Council will not pass this amendment."

The Hon'ble MR. BRIGHTON said:—"I think, for the reasons I have already fully placed before the Council, that this amendment ought not to be accepted. I may observe with regard to the second of the two provisos, the Magistrate already has the power, under the ordinary law, of summoning any person to give evidence in any case before him, and I can see no possible object in passing a provision which is redundant and merely draws unnecessary attention to the powers conferred upon all Courts of law. I am by no means sure that the proviso will not have the opposite effect to that contemplated by the hon'ble member."

The Hon'ble SIR JOHN LAMBERT said:—"I am afraid that these provisos will not help us. The state of the law will very soon be known, and all that the person charged will have to do will be to deny that he or she committed the offence, and request that the person or persons at whose instance the arrest was made be produced, and it will invariably happen that the person who has given his name to the police will be summoned by the Magistrate to give evidence. As soon as this is known, the law will become inoperative, and there will certainly be no possibility of oppression or illegal conduct on the part of the police, for the simple reason that they will cease to act at all."

The Hon'ble THE PRESIDENT said:—"My objection to this amendment is that I fear it will make the law very largely inoperative. Persons aggrieved, will prefer to undergo the annoyance rather than face the trouble and annoyance of appearing in the Police Court; and this will especially be the case with ladies who are ignorant of the nature of a Police Court, and who would naturally object to appear in such cases. I think it will be extremely unwise to make it impossible for people to rid themselves of the annoyance which they suffer. I trust all who desire the success of this Bill, and to support the action of the Government in bringing it forward, will vote against this amendment."

The Motion being put the Council divided:—

*Ayes 7.*

The Hon'ble Mr Smyth.  
The Hon'ble Mr. Womack.  
The Hon'ble Mr. Bonnerjee.  
The Hon'ble Maharaja Sir Luchmessur  
Singh Bahadur of Daibhanga.  
The Hon'ble Mr Ghose  
The Hon'ble Babu Surendranath  
Banerjee  
The Hon'ble Sir Charles Paul.

*Noes 9.*

The Hon'ble Maulvi Muhammad Yusuf  
Khan Bahadur.  
The Hon'ble Maulvi Serajul Islam Khan  
Bahadur.  
The Hon'ble Mr. Beighton.  
The Hon'ble Mr. Buckland.  
The Hon'ble Maulvi Abdul Jubbar Khan  
Bahadur.  
The Hon'ble Mr. Bourdillon.  
The Hon'ble Mr. Lyall.  
The Hon'ble Sir John Lambert.  
The Hon'ble Mr. Gotton.

So the Motion was lost.

The Hon'ble SIR JOHN LAMBERT moved that the Bill as settled in Council be passed. He said:—

“The Bill has been very materially altered, and I trust it will be found to work, but I am very doubtful whether it will have the effect which is desired.”

The Motion was put and agreed to.

### THE LAND RECORDS MAINTENANCE BILL.

The Hon'ble MR. BUCKLAND moved that the Hon'ble MR. BEIGHTON be appointed to the Select Committee on the Bill to provide for the maintenance of the Record of Rights in Bengal, and for the recovery of the cost of Cadastral Surveys and Settlements in the place of the Hon'ble MR. WILKINS.

The Motion was put and agreed to.

The Council adjourned to Saturday, the 30th instant.

CALCUTTA;  
The 16th April, 1895. }

GORDON LEITH,  
Assistant Secretary to the Govt. of Bengal,  
Legislative Department.

## RESOLUTION ON THE OPIUM ADMINISTRATION REPORT, 1893-94.

## REVENUE DEPARTMENT—OPIUM.

*Calcutta, the 13th April 1895.*

. RESOLUTION No. 2032.

## READ—

The Report on the Administration of the Opium Department for the year 1893-94 (1st September 1893 to 31st August 1894).

The Board's report is due to this Government by the 1st February, and should be forwarded to the Government of India by the 1st March, together with His Honour the Lieutenant-Governor's Resolution on it. The present report did not, however, reach Government till the 26th February 1895. This delay is said to have been due to the late receipt of the Opium Agents' reports in consequence of certain revisions in the form and system of the report which had been ordered by Government. As the orders referred to were passed so long ago as the 22nd December 1893, they should not have been allowed to cause delays.

2. The season 1893-94 is memorable for its disastrous results; the failure of the crop was far more serious than in any of the preceding five years, during which it had been continuously deficient. It is remarkable that, until the collection of the opium had actually begun, no indication of the serious nature of the falling off in the outturn had been perceived by even the most experienced officers. The crop report at the end of March estimated the produce in the Bihar Agency at 33,660 maunds, while the actual result was 24,312 maunds at varying consistencies. Mr. Wright closed his tour in the Benares Agency on the 17th April without having noticed that there was any cause for alarm. Even now, though the reports make mention of "unseasonable weather," "rainy, cloudy and unfavourable weather," "east winds and fogs which induce blight," "excessive and continuous damp," there is no assertion that these conditions prevailed to an abnormal extent, and there is an entire failure to record with precision the meteorological history of the season and to connect cause with effect. The extent of the damage was not realized until the lancing of the poppy had shown how meagre the secretion of juice in the capsules actually was. This failure to read the signs of the sky reflects severely on the agricultural knowledge of the department.

3. The area actually cultivated with poppy in the Bihar Agency, excluding failures, was 3,79,714 bighas (2,37,321 acres) against 3,85,761 bighas in the season 1892-93, and in the Benares Agency 3,53,409 bighas (2,20,881 acres) against 3,41,028 bighas. The area of failures in both the agencies was less than in 1892-93, being 3 per cent. against 5 in the Bihar Agency, and 1·3 per cent. against 3 in the Benares Agency. But, as stated above, the outturn in both the agencies was remarkably poor. Bihar produced only 26,116 maunds at 70° consistence, and Benares 35,236 maunds, against 40,339 maunds and 42,970 maunds, respectively, in the preceding year. The average produce

Cultivation and produce. per bigha was 2 seers 12 chitaks in the Bihar Agency and 3 seers and 15 chitaks in the Benares

Agency, against a normal average of about 5 seers to the bigha. The average in both the agencies is the worst on record. The number of cultivators was 621,266 in Bihar and 544,005 in Benares, a slight decrease in both cases on the figures of the preceding year. The average produce to each cultivator was only 1 seer 10 $\frac{3}{4}$  chitaks in Bihar and 2 seers 9 $\frac{1}{2}$  chitaks in the Benares Agency, against 2 seers 8 chitaks and 3 seers 1 $\frac{1}{4}$  chitaks, respectively, in the two agencies in the year 1892-93. Thus the loss to the cultivators, who were paid at the rate of Rs. 5 per seer, was serious. Mr. Tytler, the Sub-Deputy Opium Agent, Aliganj, estimates that the blight cost the cultivators in his Sub-Agency seven lakhs of rupees, and the loss to Government in that area was of course far greater. The consistence of the drug was much higher than usual, the average being 69·89 in Bihar against 63·57 in 1892-93, and 71·33 in Benares against 67·2 in 1892-93. The result was that all the

opium in Benares was manufactured at 72°, the standard being 71° and nearly half that in Bihar had to be manufactured at a consistence of 76° the standard being 75°. A high consistence, the Benares Agent remarks, is satisfactory to the cultivator, in that he gets a higher price for the drug: but to Government it causes loss; thus 16,543 chests were manufactured at Ghazipur at a consistence of 72°; had it been possible to bring this down to 71°, there would have been 233 more chests, which at an average price of Rs. 1,200 would have produced Rs. 2,79,600. This sum was lost to Government and also a premium of Rs. 1,31,875 was paid to the cultivators on account of the higher consistence, making a total loss to Government of Rs. 4,11,475. Additional work was also entailed on the factory staff in having to reduce the high quality down to the proper consistence for caking. The superior quality of the drug, moreover, as the Board point out, brings in little or no extra profit to Government, for the prices realized at auction are regulated not so much by the actual quality of the opium as by the quantity available for sale.

4. The cost price of a maund of opium to Government rose from Rs. 220 in 1892-93 to Rs. 232 in Bihar, and from Rs. 227 to Rs. 230 in Benares, and the cost price of a chest from Rs. 362-10-10 in Bihar and Rs. 394-15-7 in Benares in 1892-93 to Rs. 389-2-10 and Rs. 404-2-6 respectively. This increase was due partly to the high consistence of the crude opium already referred to, and partly to the fact that, as the outturn was small, the fixed charges for permanent establishment, &c., had to be divided among a smaller number of chests. The price paid to cultivators for the raw produce was Rs. 5 a seer as in former years. For some time past it has been recognised that owing to continued failures of the crop and to the rise in the price of other crops which especially compete with the poppy, the esteem in which the crop has always been held among some of the cultivating classes has tended to decrease: and an increase in the rate of payment for the raw produce was only a question of time. In the Resolutions on the reports for 1891-92 and 1892-93 remarks to this effect were made. The necessity for such a concession was accentuated by the particularly bad results of the year under report, and it was felt that it could no longer be withheld if the cultivation of poppy on the same scale as in past years was to continue. Accordingly, the Government of India decided in May 1894 that the price of raw opium should be raised from Rs. 5 to Rs. 6 per seer with effect from the crop of the season 1894-95, and it is to be hoped that this measure will have the effect of erasing from the cultivators' minds the disastrous and disheartening results of the past few years. Judging from the results of the settlements of the current season, it appears to have already had this effect in the Benares Agency where the area engaged for was 438,681 bighas or an increase of 26.41 per cent. on the area for 1893-94. In the Bihar Agency on the other hand the area engaged for (3,88,613 bighas), notwithstanding the enhanced price, showed a decrease of 4.1 per cent. compared with the previous year.

5. The number of chests of provision opium manufactured was 16,785 in the Bihar and 16,543 chests in the Benares Agencies, giving a total of 33,328 chests, that is 7,177 chests less than in the previous year. The normal sales used to be fixed at 54,000 chests a year, and the reserve at 30,000 chests, but these totals have not been reached for several years past, and in fact the reserve has disappeared. It was originally arranged to sell 42,300 chests during 1894; but, in consequence of the scanty outturn of the season of 1893-94, it was decided to reduce the number to 41,040 in order that the chests thus saved might be sold in 1895. Ultimately the number to be sold in 1895 was fixed at 37,260 chests, and to enable even this reduced number to be available, it will be necessary to indent on the current season's crop to the extent of some 2,651 chests.

6. In order to supplement the home produce and reserve it as far as possible for the manufacture of provision opium, the purchase of Malwa opium for excise purposes, which had been abandoned since 1886, was again resorted to during the year under report, and Mr. Hastings was deputed to Indore to buy 5,000 maunds of the drug. The quantity actually purchased was 3,455 maunds, which is estimated to produce 2,550 maunds at 90° consistence. The drug thus

purchased was found to be much saturated with oil. The average cost to Government of a maund at 90 per cent. of the Malwa opium purchased in 1893-94 was Rs. 987-7-4, which is less than in 1882 and 1884, but more than in the years 1883, 1885 and 1886. It is much higher than the price paid to the Bihar Agent.

7. The Board have caused the forms of the statements relating to excise opium submitted by the Benares Agent to be altered so as to assimilate them to those in the Bihar report.

#### Excise Opium.

This change prevents any comparison being made, as far as Benares is concerned, with the figures under this head for previous years. From Table XX in the two Agents' reports, it appears that in the Patna Factory 3,503 maunds 18 seers of Excise opium were manufactured between the 1st September 1893 and the 31st August 1894, compared with 1,455 maunds 26 seers during the corresponding previous period. At Ghazipur 4,839 maunds 27 seers were manufactured between September 1893 and August 1894. During the financial year 1893-94, 1,338 maunds 2 seers were despatched from Patna, and 3,671 maunds 1 seer from Ghazipur.

The figures in the tables relating to Excise opium, of which there are five in each report, are rendered obscure and confusing by the fact that they deal with three different periods, viz., the financial year from 1st April to 31st March, the Factory working period from 1st April to 31st October, the opium year from 1st September to 31st August. The Lieutenant-Governor would be glad if the Board would consider whether, by selecting for comparison one period only, these statistics could not be simplified.

8. The total expenditure during the year in the two agencies was Rs. 1,41,67,587 against Rs. 1,86,18,101 in the preceding year. The decrease in the aggregate is

#### Expenditure.

due to the low outturn. Under the head of "cost price of opium" there was a decrease of Rs. 28,60,206 in the Bihar, and Rs. 15,80,601 in the Benares Agency. There was also a decrease in all the other main heads of account in both agencies, except under manufacturing charges and establishment in Bihar. Larger payments for exchange compensation allowance account for the latter increase, while the former is said to be due to the purchase of a large quantity of timber for the manufacture of chests in the saw-mills, Government having ordered that chests should no longer be supplied by contractors.

9. All the poppy lands in the North-Western Provinces are irrigated except-

#### Irrigation and advances for wells.

ing 6,013 bighas in Gorakhpur, 1,205 bighas in Gonda, and 300 bighas in Basti. In Bihar, on the other hand, 22 per cent. of the land is unirrigated, and while in Monghyr and in the South Ganges districts all the lands are irrigated, in Motihari, Tirhut, Bettiah, and Hajipur the percentage of unirrigated lands rises as high as 72, 68, 64 and 41 respectively. Whether it be due to the character of the soil or to the absence of wells, the average outturn in these subdivisions is lower than in any of those where irrigation is more generally practised. But on the other hand, in a wet season like that of 1893-94, the benefit of artificial irrigation was less clearly felt, and the loss in the unirrigated subdivisions, compared with the preceding year, was less than in those where the system of cultivation is more elaborate. This leads to the conclusion that, while advances for constructing wells should be liberally given where the soil is good and will repay the cost, there are tracts where such an outlay will be less, or hardly at all, remunerative. Out of a total sum of Rs. 11,059 advanced in that agency, none was distributed in Tirhut and Motihari, and only Rs. 135 in Hajipur and Rs. 408 in Bettiah. In the Benares Agency the results are more favourable. Out of Rs. 11,176 advanced, Rs. 5,759 or more than half was taken by cultivators in Gorakhpur. The Lieutenant-Governor desires that the granting of advances for the purpose should be encouraged, but with discrimination.

10. The working of the saw-mills at Patna during the year has proved very successful. In December 1893, Government

#### Saw-mills.

approved the Board's proposals for working the mills throughout the year instead of closing them for some months as had formerly been the practice, and as a result it is now found possible to abandon entirely the purchase of chests from contractors, and to manufacture at the mills enough for both agencies at a reduced cost and of a better quality. The

cost price of a mango wood chest made at the mills during the year under report was Re. 1-11-8 against Re. 1-13-9½ in the preceding year; the average price of a similar chest made by contract during the last ten years is said by the Bihar Agent to have been Re. 1-14-11.

No sâl wood has been purchased since 1891, but a stock of it was kept to guard against contingencies, and this the Board now propose to do away with. The average price paid per cubic foot of sâl wood was Re. 1-5-5, that of mango wood annas 6-7½, so that the saving effected by this change has been considerable. The total number of chests turned out during the year was 48,288 against 17,414 in 1892-93.

Breachers of the Opium law.

11. The following table shows at one view figures relating to the breaches of the Opium law during the past two years:—

	Cases investi- gated.		PERSONS—						FINES—				Rewards to informers.	
			Tried.		Convicted.		Acquitted.		Imposed.		Realized.			
	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Bengal	996	1,353	1,155	1,661	989	1,446	166	215	Rs. 26,717	Rs. 27,092	Rs. 14,214	Rs. 10,234	Rs. 22,235	Rs. 22,031
North-Western Provinces	585	552	546	555	479	403	92	163	7,542	7,012	5,030	4,583	4,510	4,618

Three hundred of the cases investigated in Bengal during the year were under Act XIII of 1857, against cultivators for short cultivation; all the persons involved, 315 in number, were punished. These cases were confined almost entirely to Saran district, but no reason has been given for the large number of offences there. Of the fines imposed, Rs. 1,417 were remitted on appeal. In the North-Western Provinces only twenty-five out of the 552 cases were under Act XIII of 1857—13 for short cultivation, 10 for embezzlement of opium, and two for the illegal purchase of opium from cultivators. There were two important seizures of opium during the year—one of 36½ seers at Samastipur, and the other of 22 seers at Bankipore. In both cases the delinquents were adequately punished with fine and imprisonment.

12. The question of introducing the Benares or *asamiwar* system into the Bihar Agency has engaged the attention of Government for a series of years, but hitherto every proposal has been vetoed, mainly on the ground of the increased establishment it would necessitate. The important difference in the two systems, which creates a grievance that ought to be removed, is that, while in Benares each cultivator is paid separately for the crude opium he brings to weighment after deducting the advances he has received, in Bihar, though each cultivator's output is separately weighed, payment is made in a lump to the *khatadar* for all the cultivators he represents after deducting all the advances they have received. If therefore a bad cultivator has received an advance larger than the value of the opium he brings, the balance is not refunded by him, but is deducted from the sum due to the good cultivators, the value of whose opium exceeds their advances. There is another grievance arising out of the commission (*kharcha*) which the *khatadar* levies from all his cultivators at a rate varying from 12 annas to Rs. 2-8 a bigha. The Opium Commission of 1883 strongly recommended the extension to Bihar of the Benares system, but Government at that time were of opinion that, although no doubt existed as to its theoretical superiority, there were financial considerations against its introduction, and deemed it inexpedient to disturb a system which had taken deep root, until at least maps and other field records, such as existed in the North-Western Provinces, were available in Bihar in order to secure reasonable chances of success. The Government of India accepted this view. Since that time the attention of Government has been attracted to the evils of the *khatadari* system more than once, and proposals for the partial introduction of the Benares procedure into Bihar have been made. During his tour in Bihar during the last cold weather the matter was prominently

brought to the notice of Sir Charles Elliott; he was led to doubt whether any such large increase of establishment as was feared would really be requisite, in order to distribute money separately to cultivators whose produce had already been separately weighed and recorded; and he proposed to introduce the Benares system experimentally in two or three sub-divisions. On further consideration, however, it seemed better to propose a careful and detailed enquiry into this question, and the other subsidiary points connected with it, and a reference has been made to the Government of India to this end.

10. Mr. F. Baker, who was Officiating Opium Agent, Benares, from the 25th April to the end of the season, deserves special mention for the interest taken by him in the settlements for the current season, which owe their success to his endeavours. Among the officers subordinate to the Agents, Mr. Tytler, the Sub-Deputy Opium Agent of Aliganj, is again commended for the general excellence of his work, in recognition of which he has been lately appointed a Companion to the Order of the Indian Empire. Messrs. L. Parrott and A. C. Bryson, Sub-Deputy Opium Agents, Bihar, and Dr. Maynard, Officiating Factory Superintendent of Patna, are also favourably mentioned. Mr. Wright, the Benares Agent, has refrained from expressing any opinion on the merits of officers under him, as his experience of them is yet very limited; but he has placed on record his high opinion of Mr. Gregory both as Sub-Deputy Agent and Factory Superintendent, and commends Mr. Hastings' work in connection with the purchase of Malwa opium.

The Lieutenant-Governor desires to record his appreciation of the value of the services of Mr. D. R. Lyall, the Member of the Board of Revenue in charge of the Opium Department. He inspected both the agencies during the year, and Mr. Westmacott, who officiated for him in the summer, also inspected the Patna Agency.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,  
*Secretary to the Government of Bengal.*

# **SURVEYS AND SETTLEMENTS IN BENGAL DURING THE YEAR ENDING 30TH SEPTEMBER, 1894.**

REVENUE DEPARTMENT, LAND REVENUE.

*Calcutta, the 13th April 1895.*

RESOLUTION No. 2031.

READ—

Letter No. 260A., dated the 9th March 1895, from the Board of Revenue, submitting the Reports of the Director of Land Records on Settlements, and the Director of Bengal Surveys on Surveys, during the year ending the 30th September 1894.

THE Lieutenant-Governor observes with pleasure the earlier dates of the submission of these reports to the Board and Government as compared with the previous year. Submission of reports. The dates are shown in the following table :—

	Due to Board.	Dated	Reached the Board.	Due to Government.	Reached Government from the Board.
1	2	3	4	5	6
Settlement Report { 1892-93 1893-94 ...	15th December ... Ditto ...	7th March ... 20th January ...	19th March ... 2nd February ...	15th January ... Ditto ...	7th May. 14th March.
Survey Report ... { 1892-93 1893-94 ...	15th December ... Ditto ...	28th February ... 12th December ...	29th March ... 28th January ...	15th January ... Ditto ...	7th May. 14th March.

Though considerable improvement in punctuality has thus been effected, admitting of the issue of this review about two months before the date of its publication in 1894, the Lieutenant-Governor is not satisfied that his object has yet been fully attained. He is anxious, for the sake of the Directors and the officers of their Departments, that their reports should be written, and off their minds, before the commencement of the inspection season, that is, before the end of October, and he looked to the individual Settlement Officers to have their reports ready in time for this purpose. He regrets to find that the officers in charge of the important settlements could only submit their reports on dates ranging from 29th October to 25th November, and he is aware that the Directors' tours of inspection have consequently been interrupted. If the tabular statements are written up monthly, the totals for the year should be in each Settlement Officer's hands by the 5th October, and his report ought to be in the Director's hands by the 15th, so as to enable the Director to submit his Departmental report by the 15th November. These dates are prescribed as the obligatory points for future working; so that the field season may be kept free, or nearly so, from report-writing.

2. Colonel J. E. Sandeman, I.S.O., was Director of Surveys in Bengal throughout the year, but was absent on privilege leave from 8th August to the end of September, when arrangements were made for the current duties of his office. He was in camp for 190 days, which were distributed over every month he was on duty, except during the recess of May and June. Mr. W. C. Macpherson, C.S., was in charge of the Office of Director of Land Records and Agriculture throughout the year, with the exception of a month's privilege leave in May-June, during which Mr. E. G. Colvin officiated for him. The Director and his *locum tenens* were on tour for 152 days in the year, distributed over every month of the year. His tours which took him, often more than once, to every settlement under his charge, included journeys to a Simla Conference and the Central Provinces on business connected with the Department.

The Lieutenant-Governor inspected the settlement work in North Bihar in February, in Cuttack and Balasore in April, and in Tippera in August, 1894. The Member of the Board of Revenue in charge of the Department was unable to inspect any of the major settlements during the year.

3. Considerable relief has been afforded to the Director of Land Records by the entire transfer of petty settlements and connected correspondence to the Commissioners and the Board: a manual of standard procedure for these minor operations has been under consideration during the year, and will shortly be issued.

4. The Director of Land Records has had during the year the supervision of settlements, including both the major and minor operations, in all the nine Divisions except Bhagalpur and the Presidency: the survey work has extended over seven Divisions, Dacca and Bhagalpur alone not having been touched. The following areas were under the control of the Director of Land Records:—(1) for settlements of revenue in temporarily-settled tracts and Government estates (inclusive of portions of permanently-settled and revenue-free estates included in the survey operations), 8,178 square miles; (2) for survey and record of rights in private estates, 3,669 square miles; (3) for survey and record of rights in wards' estates, 1,189 square miles; total 13,037 square miles, as compared with 12,490 square miles in 1892-93. The following statement shows the general outturn and cost of survey-settlement work under the control of the two Directors during the year 1893-94, as compared with the two preceding years, according to the reports received:—

	Traverse survey.	Skeleton boundary survey.	Forest survey.	Topographical survey.	Cadastral survey.	Record writing.	Hill sketching.	Cost of survey.	Cost of settlement.	Total cost.
1	2	3	4	5	6	7	8	9	10	11
	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.	Rs.	Rs.	Rs.
1891-92	4,719	187	927	62	2,740*	1,177	131	7,92,469	4,66,480	12,58,949
1892-93	5,253	1,247			3,000	2,012		7,88,330	5,00,361	12,88,691
1893-94	3,485	175			774†	3,022		6,00,120	6,53,28	12,53,408
	18,450	1,609	927	62	9,134	7,996	131	20,77,701	16,20,600	36,98,301

\* Includes 363 square miles revision survey in Cuttack.

† Including revision survey of 100 square miles in Puri and 63 square miles in Gava.

The cost of survey and settlements incurred by Government from the beginning of the operations up to the 30th September 1894 in the three important areas under settlement of land revenue, viz., Orissa, Chittagong, and the Western Duars, has increased from nearly 27 lakhs to nearly 32 lakhs of rupees. The expenditure in Wards' estates on account of survey and settlement proceedings has increased in two years from Rs. 71,147 to Rs. 1,30,223, exclusive of some revision proceedings in the several estates. In Private estates the expenditure has risen from Rs. 32,914 in 1891-92 to Rs. 5,94,141 in 1893-94, in consequence of the development of work in North Bihar, and in the estates of the Maharaja of Hill Tippera.

5. In this Government's Resolution No. 118T.R., dated 30th May 1894, the Lieutenant-Governor expressed his views with regard to the improvements which he desired to see carried out in the statistical information furnished in the survey and settlement reports and in their arrangement, and he is glad to find that his wishes have been complied with. Ample statistical information has been generally supplied by the Settlement Officers, though not always in the same forms, and the Director of Land Records has been able in his General Summary to show the areas under settlement, of record-writing completed, of records attested and existing rents recorded, the number of tenants for whom rents were settled, and the area of final publication of records. The Director has also furnished a useful *resumé* of the important subjects of correspondence and legal decisions during the year with regard to procedure and principles of survey and settlement, which will be convenient for future reference. In the Survey Report the estates have been dealt with in the groups and order followed in the Settlement Report, as directed last year.

6. In the following paragraphs the progress made in the larger survey-settlements will be reviewed in the same order as in preceding years.

7. By the end of the season, out of the whole area of 12,524 square miles of the four districts of North Bihar under survey-settlement, traverse survey remains to be completed in 4,098 square miles, cadastral survey in 8,830, and record-writing in 9,179. The work done from the beginning of the operations is shown in the following statement:—

		TRAVERSE SURVEY.		CADASTRAL SURVEY.		RECORD-WRITING.		Total cost of cadastral survey and record-writing.	COST-RATE PER SQUARE MILE.			Cost of survey and record-writing per acre.	Expenditure on settlement.

Total		12,500	7,374	2,990	2,700

\* The figures for Muzaffarpur exclude the work done during the experimental survey of 1885-86.

8. These figures show that the traverse had got far ahead of the cadastral survey, and its progress was therefore greatly curtailed in 1894-95, and confined to the completion of the Saran district. The cadastral survey has somewhat improved in quantity; in 1892-93 one party accomplished 945 square miles; in 1893-94 two parties covered 2,045 square miles. This, however, is still below the rate at which trained amins ought to work, and it is hoped that in the current year a nearer approach will be made to the standard of 1,250 square miles per party. The amins employed are partly from the North-Western Provinces and partly local men (but not patwaris, the employment of these having been forbidden by Sir A. P. MacDonnell's orders in the autumn of 1893 as noticed in the Resolution on the previous year's report): the former are always better in survey work, while the latter come near them or even surpass them in record-writing. In the Saran district there were 108 foreign and 99 local amins, in Champaran 79 and 127, in Muzaffarpur 198 and 294 respectively. The total number is 905, and as they surveyed 2,045 square miles, the average area per

amin was 2.26 square miles in the season. Their respective capacity for work is shown in the following table of daily outturn:—

DISTRICT.	NORTH-WESTERN PROVINCES AMINS.				LOCAL AMINS.			
	At the beginning of the season.		At the end of the season.		At the beginning of the season.		At the end of the season.	
	Acres measured and plotted.	Fields entered in the records.	Acres measured and plotted.	Fields entered in the records.	Acres measured and plotted.	Fields entered in the records.	Acres measured and plotted.	Fields entered in the records.
1	2	3	4	5	6	7	8	9
Saran	13	39	40	60	5	36	20	54
Champaran	16	20	21	38	7	17	20	46

For Muzaffarpur the distribution between local and up-country amins has not been kept. For both classes taken together the figures are:—

	Acres measured and plotted.	Fields entered in the records.
Beginning of season	13	39
End of season	17	44

The variation in the figures of the cost-rate shown in columns 9, 10, 11 of the table in the last paragraph is partly explained by these variations in the rates of work, but too much stress must not be laid on the figures, as the work of one year has to some extent overlapped and fallen on the next year, and the cost-rate of the respective stages of work cannot be accurately given till the work is entirely finished in a district or part of a district. The record-writing fell a little behind the mapping in 1892-93, and still more so in 1893-94; taking the two years together, of 290 miles mapped in 1892-94, the records had to be written when the season of 1894-95 opened. Most of these arrears accrued in Muzaffarpur, where the records are more complicated because of the complicated tenures and minute subdivisions of proprietary right in the coparcenary villages.

9. Colonel Sandeman gives the following account of the changes made during the year in the *technique* of the work of record-writing:—

“Formerly one man constructed the map, and another frequently wrote the records; the map and the numbers in it were left in pencil for a draftsman to ink them in office; another draftsman finished the map; a third wrote the title, a fourth the surrounding names; special estimators extracted the areas; one set of muharrirs entered them in the khasras, others in the khatians, which were written by a special establishment; terijes, milan khasras, and crop statements were all prepared by special and separate establishments. At every step a stranger to the records of a village had the handling of them. The loss of power in such a system can only be appreciated by those who have seen the voluminous and complicated nature of many a village record.

“Under the new orders our establishments are of fixed strength in each camp, and are also employed during the recess in completing their own work. The season's area for survey is divided among them, each man having a small circle of two-and-a-half square miles, or as much as he can do. Of this area he submits maps, complete as to outline, topography, title, and adjoining names—all in ink; he and his muharrir, who will also be the chairman in future (a reform introduced by Lieutenant Crichton), write the khasras and parchas, extract areas, khatians, milan khasras, terijes and crop statements themselves,—in fact, they do everything from start to finish of their own villages, so that the record never changes hands, which is an improvement which can hardly be too highly rated.”

The principle thus introduced is that of doing in the field only that part of the work which must be done there, leaving the rest of the record to be completed in the recess. The Lieutenant-Governor believes that the aim of the Survey Department should be to accomplish the following work in the field: the map should be plotted, the fields numbered, and the areas roughly taken out by the amins with the comb; the khasra should be filled up except in cases where disputes are found to exist and the amin is not authorized to make an entry; the parcha should be prepared in counterfoil, entering the names of tenants, numbers of fields, and approximate areas; one copy of it should then be given to the tenant with a warning that the areas are liable to alteration, and that the places for rent and status will be filled up at the time of attestation. The rest of the record should be prepared during the recess.

10. As regards the principles on which the record-writing should be based, there was considerable discussion during the year. Material changes had been introduced by the Lieutenant-Governor in the season 1892-93, by allowing the amins to make the preliminary entries of rent and status against each tenant's name in the records, and where a dispute as to the facts existed, to make in red ink the entry which they found or believed to be true. This was contrary to the previous practice in Bengal, though it was in conformity with the practice of other Provinces in India. It was opposed by the Board on the ground that too much power was thrown into the amin's hands, while the argument on the other side was that the system of check and control was so complete that the amin could hardly misuse his power, and that such facts can be more accurately collected by an inspecting officer on the field than by a judicial officer sitting in his tent as a Court. Sir A. P. MacDonnell, while officiating as Lieutenant-Governor, agreed with the Board of Revenue, and directed the procedure to be based on their views. On Sir C. Elliott's return from leave, a compromise was arranged by which the landlord should give in a list of his tenants and their rents, and the amin should make entries according to this list unless the tenant denied its accuracy, in which case he should enter in red ink the rent which he declared himself to pay.

The season was then (at the end of January 1895) far advanced, and it was impossible to introduce this system very widely. So far as it was put in force, it was not approved by the officers who had to work it, as great delay took place in filing the lists, and many errors were found in them when filed. At the close of the season reports were sent in which were generally condemnatory of it, and the Lieutenant-Governor proposed to abandon it and revert to the system which he had introduced in 1892-93. The Government of India, however, decided that what may be called the special Bengal system should be retained, under which the entries of rent and status are not made in the field but in the attestation camp; and in matters under dispute the amin makes no entry, and unless an inspecting Revenue Officer can settle the dispute on the spot, while the record-writing is going on, the column remains blank, to be filled up at the time of attestation.

11. The settlement work done in each of the three districts during the two years 1892-93 and 1893-94 is shown in the following statement:—

		ATTESATATION				DEFECT RECORDS FURNISHED	SETTLEMENT OF RENTS (SECTION 101)			CASES UNDER SECTION 105		CASES UNDER SECTION 106

12. In the previous year the records of 166 square miles had been written and those of 66 square miles attested, leaving 100 square miles to be done. The programme for 1893-94 was to write the records of 1,015 square miles which were to be surveyed, besides an area of 63 miles over from last year, and to attest the 100 square miles of which records were prepared last year. Two Assistants were appointed to supervise the record-writing, but the area done only amounted to 788 square miles; the defect is attributed mainly to floods, an epidemic of cholera, minute subdivision of proprietary right, and greater care to turn out accurate work. The attestation work (which actually covered 376 instead of 400 square miles), was divided between four officers: it was begun early in October and lasted about six months, during which time 150,069 tenants were attested with 487,090 plots, or about  $3\frac{1}{4}$  plots apiece. Thus each officer on an average slightly exceeded the standard number of plots, 20,000 per month, and covered the

average area of 94 square miles. The case-work was carried on by three Assistants during the recess: it was heavy under sections 105 and 106, but the enhancement suits under section 104 were few and unimportant; suits were brought only against 2,273 tenants, or about 1·5 per cent. of the whole number attested, and the rents were raised from Rs. 23,600 to Rs. 24,240—a rise of 3·7 per cent. The majority of these cases were decided on the basis of a compromise in which the raiyat acknowledged the truth of the allegations as to encroachment. Almost all the cases were tried by Mr. Lyon himself. The following remarks are quoted from his report on the subject. They show that the principles on which contested suits of this class should be decided are in a very unsatisfactory state, and in all probability they will have to be clearly laid down by legislation:—

“The basis of the large majority of the applications has been the discovery that the tenants are holding more land than they are entitled to hold at the rent which they are paying, but the judgment of the Settlement Officer has been so greatly fettered by the case-law that has grown up around this subject, that comparatively few cases on this basis have been proved against the tenants, even when the fact that they were cultivating excess land was patent to the enquiring officer. In a closely cultivated district like Muzaffarpur there is little room for extension of cultivation, but the pressure on the soil has been so great of recent years, that many raiyats have undoubtedly taken advantage of the leniency or carelessness of their landlords to absorb into their holdings small patches of waste or lands abandoned by other tenants, without any increase to their rent. In villages in which rents are screwed up to the highest point by constant remeasurements and resettlements, such encroachments are quickly discovered, and the rents of the trespassers are immediately enhanced by the landlords; but in those in which rents have been allowed for many years to stand unchanged at a low figure, and in which the landlord has made no recent enquiries as to the capacity of his tenants to bear a higher rental, these encroachments have been left for the survey to discover. It is accordingly from the more lenient landlords that the chief applications for increase of rents usually come, and it is rarely found that the rents which it is proposed to enhance are already calculated at high rates. For the above reasons it is to be regretted that the case-law relating to this question should have made it increasingly difficult for these landlords to take fair advantage of the survey operations, and to obtain rent at the current rates for lands which are at present practically paying no rents and to which the holders have no real title. The Bengal Tenancy Act clearly intended that they should obtain rent for these lands, and even instructed the Settlement Officer in certain cases to proceed of his own motion to settle rent on such lands, but successive interpretations of the Act by the High Court have imposed on the landlord conditions as to proof of the increase in area which it is well nigh impossible for most of them to fulfil. At the same time these conditions have not yet been clearly laid down or defined, and it is not altogether easy to deduce them from the cases which have hitherto been decided, with the result that neither the applicants nor the tenants understand what has to be proved, and their legal advisers, and even the Assistant Settlement Officers themselves, are hardly better informed. There has consequently been a failure on the part of the Settlement Courts to meet the reasonable expectations of some of the best landlords of the district, the officers presiding in those Courts having found themselves unable to settle a fair rent under the law, even in cases in which the applications were made in respect to tenants who were clearly trespassers on lands to which they had no right.”

13. In the Champaran district the records of 320 square miles out of 416 square miles surveyed had been written in 1892-93 and were ready for attestation: the programme was to write the records of the arrear area (94 square miles) and of about 500 square miles to be surveyed in the current year, and to attest the area prepared last year together with as much more as could be done in the early part of the current season. The record-writing of the season covered about 600 square miles, and this was placed under two inspecting officers. The area actually attested was 380 square miles: it was divided into four circles—three of about 100 square miles each, and one which was only opened in December of 70 square miles. The number of tenants attested was 61,022, with 323,511 plots—about  $5\frac{1}{2}$  plots to each tenant: work began early in November, and lasted till the end of April; assuming that it went on in full swing for five full months, each officer attested about 16,000 plots a month, which is considerably below the standard of 20,000 plots. The average area covered by each officer was 95 square miles. The most important class of cases in this district is the enhancement class under section 104. The work done was almost entirely within the limits of the Bettia estate, in which there has been a great spread of cultivation in recent years: and claims were put in for increased rent on account of this increase of area. Suits were brought against 15,720 out of a total of about 45,000 tenants—a proportion of one in three, and their rents were raised from

Rs. 1,07,439 to Rs. 1,20,833—a rise of 12·4 per cent. These cases were tried by Mr. Colvin himself and two Assistants, Babu Promotha Nath Dutt and Maulvi Gholam Ghous.

14. In Saran no field survey or record-writing had been done the previous year, and consequently there was nothing ready for attestation at the commencement of the season. The programme of the year was to write the records of the 500 square miles which were to be surveyed, and to attest a small portion of that area, if the records could be completed and sent in in time. Two officers were employed in inspecting the record-writing which was completed for 527 square miles out of the 549 square miles surveyed, and at the end of February one attestation camp was started under Munshi Nundjee, and an area of 19 square miles was completed by the end of April. During the recess he was employed in casework. Enhancement suits were brought against 426 tenants out of a total of 4,525, or about 10 per cent., and their rents raised from Rs. 2,779 to Rs. 2,992; the ground of enhancement in almost all cases was increase of area.

The sphere of this work lay entirely within the Hatwa Estate, and the accuracy of the jamabandis kept up by the Maharaja's Manager facilitated the preparation of correct records and their attestation with comparatively few disputes. Two peculiar classes of cases, however, arose in this estate from the Maharaja's claims. He denied that the raiyats' homestead lands form a part of their holdings, and the Settlement Officer accepted his claim so far that he drew up a separate list of these holdings in each village, recording the Maharaja as proprietor and the raiyats as occupants holding rent free and not liable to ejection. Again, the Maharaja made extensive claims to "zerat," (or proprietors' sir land) including in that category lands thrown up and leased afresh to new cultivators, and many disputes have arisen out of these claims.

15. The result of the settlement, so far as it has gone in these three districts in recording the status, area and rent of each class of tenant, is shown in the following table:—

*Distribution of cultivated land among different classes.*

	SARAN.					CHAMPARAN					MUZAFFARPUR (DETAILS FOR 200 VILLAGES ONLY).					MUZAFFARPUR.

Total	4,525	·	10,113	42,514	·	47,937	·	191,522	329,619	·	19,508	·	32,465	80,943	·	158,630	·

The salient points in this statement are—

- (1) The great preponderance of "settled raiyats" in all three districts.
- (2) The lower rate of rent in the Bettiah estate as compared with the other two districts.

Taking all classes of raiyats together, the average rate per annum in Saran is Rs. 4-12-5, in Muzaffarpur Rs. 3-4-1 and in Champaran (Bettiah) Re. 1-14-5. This low rate explains and justifies the large amount of enhancement claimed and decreed in this district.

16. The total cost of settlement in the operations in North Bihar down to the end of 1893-94 amounts to Rs. 1,84,324, and the expenditure on traverse and cadastral surveys, including record-writing, in Muzaffarpur, Champaran, Saran and Darbhanga, being Rs. 6,51,203, the total amount spent in North Bihar on survey and the preparation of a record of rights down to the end of September 1894 is Rs. 8,35,527. The Settlement Officer of Champaran and Saran states that the cost of settlement of the area already dealt with in those districts will

not much exceed 5 annas an acre (exclusive of survey), and he hopes that with the experience now acquired work will be done more cheaply.

17. The survey of the temporarily-settled estates in Orissa has now been completed with the exception of a few scattered mahals, comprising a few square miles, in killa Aul in the district of Cuttack. The following table shows the progress made in each year from the commencement of the operations in 1889-90:—

YEAR.	PURI.			CUTTACK.			BALASORE.		
	Traverse survey.	Cadastral survey.	Record-writing.	Traverse survey.	Cadastral survey.	Record-writing.	Traverse survey.	Cadastral survey.	Record-writing.
1	2	3	4	5	6	7	8	9	10
	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.
1889-90 ...	413	858	358	119	371	279	...	...	...
1890-91 ...	481	344	364	601	1,453	1,164	588	...	...
1891-92 ...	135	307	307	1,286	485	820	1,115	1,084	1,069
1892-93 ...	...	105	105	15	...	...	...	649	664
1893-94 ...	...	...	...	...	...	...	...	...	...
Total ...	1,029	1,134	1,134	1,921	2,269	2,269	1,733	1,733	1,733

N.B.—In the case of 868 square miles in Cuttack (dealt with in a previous season, not in 1893-94), the work consisted of the revision of the maps and records of a previous cadastral survey of the canal-irrigated area, and no traverse survey was found necessary.

18. The year's survey work comprised the measurement of an area of 105 square miles in Puri, belonging to the Temple of Jagannath, undertaken on the application and at the expense of the Temple authorities, and the completion of the Balasore district, of which 649 miles remained over for survey and record-writing, besides an arrear from 1882-93 of 15 miles, the records of which had not been written. The year's work also included the tracings and final preparation of the records of Cuttack town, the survey of which was commenced in 1891-92, and the survey of the town of Balasore as also the demarcation of the Madras boundary bordering on the Chilka lake.

With the exception of the Jagannath Temple lands, mentioned above, the survey hitherto has been confined to the temporarily-settled estates and to a few permanently-settled estates intermingled with temporarily-settled estates or commanded by State canals. With a view to make the new map of Orissa complete, it has been decided that a village boundary survey with topographical details should be made of the other permanently-settled estates in Orissa, which are estimated to comprise in all 1,060 square miles, and the work is in progress during the current season.

The total cost incurred under the head of survey from the beginning of the operations down to the 30th September 1891, amounted to Rs. 2,36,028 according to the Surveyor-General's reports. The following table shows the amounts expended during the last three survey years:—

		TOTAL SUMS EXPENDED.				
		Traverse survey, including demarcation and stone embedding.	Cadastral survey, including maps.	Record-writing.	Other heads.	Total.
1		2	3	4	5	6
Cuttack	1891-92 ...	Ra. 47,880	Ra. 1,11,691	Ra. 27,971	Ra. 2,635	Ra. 1,90,177
	1892-93 ...	3,794	56,178	65,311	15,878	1,41,159

Balasore	1891-92 ...	17,740	...	...	...	17,740
	1892-93 ...	49,601	79,992	33,770	...	1,63,303
	1893-94* ...	...	48,491	20,900	25,038	94,429
	Total ...	67,341	1,28,483	54,670	25,038	2,76,532
GRAND TOTAL ...		1,29,571	3,30,046	1,57,179	99,476	7,16,273

\* The cost of Balasore for 1893-94 excludes cost of Balasore town, which amounts to Rs. 2,036.

Excluding Rs. 6,293, which represents cost of the revision of survey of the Puri Temple lands, the total expenditure in Orissa under the head of survey amounts approximately to—

	Rs.
Incurred up to 30th September 1891	2,36,028
„ from 1st October 1891 to 30th September 1894	7,16,272
Total	9,52,300

The total area surveyed in Orissa, exclusive of the Puri Temple lands (105 square miles), being 5,031 square miles, the total cost per square mile is Rs. 189·3.

19. Mr. W. Maude was in charge of the settlement work in both districts with 23 Assistants under him. His programme was (1) to carry on the supervision of the record-writing in Balasore, of which three officers were in charge, Messrs. Maddox, Taylor and Cumming, who inspected 770 villages between them: this work was carried out with exceptional vigour and completeness; (2) to complete as much attestation work as possible. All the 23 Assistants were employed on this work—some for nearly seven months, some for shorter periods when they could be spared from inspection of record-writing or other special work: but the progress made was disappointing. In Cuttack 13 officers working altogether for 74 months, attested 101,548 tenants with 438,158 plots, or  $4\frac{1}{3}$  plots to each tenant. The average work done was therefore only 5,921 plots per mensem, and each officer covered an area of about 25 miles. In Balasore 10 officers working altogether for 38 months, attested 108,435 tenants with 475,833 plots ( $4\frac{2}{3}$  plots per tenant), giving an average of 12,523 plots per mensem, or more than double the Cuttack rate. It is difficult to explain the extraordinary smallness of the Cuttack outturn. It is said that the records had been badly prepared and ill-inspected, and this is to some extent true, but in the previous year 17 officers in Orissa had attested 11,20,721 plots, or 66,000 each, or about 11,000 per mensem, while, in 1893-94, 23 officers attested only 917,029 plots. The Balasore staff was abler and more energetic, while the Lieutenant-Governor found that there was lack of intelligence and zeal among those of the Cuttack staff who were inspected by himself and the Director in April 1894. He does not, however, wish to say too much on the subject, as the reproach has been wiped away during the current year, the progress having been at the rate of not less than 20,000 plots per man up to the present month. The following table shows the entire progress in attestation work from the beginning of the work:—

				WORK DONE.				WORK REMAINING ON 1ST OCTOBER 1894.		
				Number of villages.	Number of square miles.	Number of plots.	Number of tenants.	Number of villages.	Number of square miles.	Number of plots.

20. Only three officers were retained during the recess, the rest reverting to general duty. Mr. Taylor was employed on the work of fixing fair rents. He prepared rate maps for 41 villages in pargana Bakhrabad, near Cuttack, and settled fair rents for 32 villages, containing 5,320 tenants whose rents were raised from Rs. 7,384 to Rs. 11,054. The Director of Land Records observes that this work and the assessment of revenue promise to be attended with much difficulty in Orissa on account of the length of period which has elapsed since the last settlement, the number of privileged tenures, and the cumbrous nature of the procedure of the Tenancy Act.

Another Assistant Settlement Officer, Babu Prasanna Kumar Banerjee, tabulated statistics for eight parganas of the district of Puri, with the result that out of 201,536 tenancies, excluding under-raiyats, 140,181 were found to be of settled and occupancy raiyats, 10,761 of non-occupancy raiyats, and the remainder holdings of proprietors and tenure holders and holdings of rent-free tenants. The table, however, is not prepared in such a way as to be compared with the figures presented above in paragraph 15 for the three Bihar districts. A third was employed in publishing draft records and in case-work; 563 boundary cases and 19 disputes under section 106 were disposed of.

21. Much more work ought to have been done during the year in regard to both these items. The tabulation of results as to status and existing rents should go on *pari passu* with the attestation, and should afford the Settlement Officer grounds for his first rough estimate of the character of the fair rent settlement which has to be undertaken. And he should both take that settlement in his own hands and also employ two or three of his most capable Assistants on it in order that by degrees experience may be obtained, and a system laid down. It is a great mistake for a Settlement Officer to keep his eyes too much fixed on one class of work and to aim at finishing attestation (for instance) over the whole district, before enhancement cases are begun, or the principles of the settlement of Land Revenue worked out.

22. The cost incurred during the year ending 30th September 1894 amounted to Rs. 1,66,331, which, distributed over 634 square miles, the total area attested, gives a cost rate of about Rs. 262 per square mile, or about 6½ annas per acre, against 7½ annas, the rate per acre arrived at in the previous year. The total cost of the settlement operations down to the end of the year is reported to be Rs. 6,08,320, and the expenditure under the head of survey being Rs. 9,52,300, the total amount expended on the survey and settlement operations in Orissa down to 30th September 1894 amounts to Rs. 15,60,620.

23. In Chittagong the survey work is completed and the survey parties have left the district. The settlement was under Mr. Allen, aided by six Assistant Settlement Officers; the aim of the staff was to finish attestation, to make progress with the settlement of fair rents, and to complete the identification of the 80,000 new mahals with those of the old settlement—a work known as “mahal milan.” Accordingly these officers completed the attestation of 72,036 tenants with 319,609 fields, or about 4½ plots to each tenant. This work was done with the expedition which always characterised the Chittagong attestation, at the rate of about 25,000 plots to each officer per month. The area covered was 283 square miles, or 94 square miles apiece: one camp closed work at the end of December, the other two at the end of March. The work of “mahal milan” was more complicated than had been anticipated, and only half the programme was got through. But it was in the work of settling fair rents that the greatest disappointment was experienced, only 13,780 tenants being disposed of, instead of 150,000 as had been hoped. Mr. Allen and five of his assistants took part in this work, and he attributes the delay to legal difficulties, and to the cumbrous procedure which was thought necessary. The new rules published under the Tenancy Act in November last have removed some of the difficulty, and in the current year the standard of 1,500 tenants per mensem for each officer is being worked up to. Even at this rate it will take to the end of the season 1895-96 to finish the 250,000 Noabad tenancies whose fair rents have to be fixed.

The following table shows the outturn of work under the principal heads from the beginning of the settlement to the end of the year under review.

1	RECORD-WRITING.		ATTERTATION.			MAHAL MILES.	SETTLEMENT OF PAIR RENTS.					CASE-WORK, EXCLUDING CASES UNDER SECTION 104 OF THE BENGAL TENANCY ACT.						Number of villages of which the draft records were published.	Number of villages of which the records were finally published.	Cost.

Total	1,080	1,080	1,026	1,825.41	789,112	2,705,592	520	25,354	1,44,442	1,99,230	38	2,615	90,390	79,635	3,710	3,594	312	104	5,92,747 12 9		

(a) The records of only the permanently-settled portions of these villages have been published.

24. In the Thana Ramu the new assessments came into force from 1894-95 in 48 of the 50 villages, the revenue being raised from Rs. 89,328 to Rs. 1,20,466. The collection of the enhanced revenue imposed on the Noabad taluks has so far been very satisfactory. The final report on the assessment of this circle has not yet been received, but is expected shortly.

The effect of the settlements of fair rents in the Sadar subdivision in increasing the Government revenue is as follows:—

CLASSES OF TENANTS.	Number of tenants.	Former rental.	New rental.	INCREASE.	
				Amount	Percentage.
1	2	3	4	5	6
Talukdars ...	1,574	Rs. 4,687	Rs. 7,841	Rs. 3,154	67
Jotedars ...	2,181	4,101	4,384	283	6.9
Tenants who previously paid no rent ...	232	.....	612	612	
Total ...	3,987	8,788	12,837	4,049	46

Rents of raiyats have been generally left untouched except where new lands have been taken up: in the assessment of taluks at least 30 per cent. of the assets has been left to the talukdars, and, where there is any likelihood of hardship resulting from too large an increase of the rent payable by the talukdar, a discretion has been left to the Settlement Officer to leave a larger percentage of the assets to the talukdar, and to take progressive enhancements. In order to prevent excessive enhancement in any particular case, the general rule has been laid down that (except where the amount is extremely small) no one's rent should be more than doubled, and where necessary the Settlement Officer is empowered to ease off the increase by progressive assessments, not taking the whole at one step.

25. Statistics have been tabulated for 601,211 of the 759,112 tenancies for which rights and existing rents have been recorded:—

	Number of tenanc. es.	Percentage of total number.	Average cultivated area of holding in acres	Average rent per cultivated acre.
1	2	3	4	5
(1) Proprietors' <i>sir</i> (nij-jote) ...	7,874	8	{	Rs. A. P.
(2) Held by proprietors but not true <i>sir</i> ...	36,740			.....
(3) In cultivating possession of tenure-holders.	142,623	23.5		4 1 7
(4) Raiyats at fixed rates ...	97,741	16.2		4 10 1
(5) Settled raiyats ...	274,070	47	{	6 1 6
(6) Occupancy raiyats ...	9,072			6 10 7
(7) Non-occupancy raiyats ...	24,616	4		6 9 9
(8) Rent-free holders ...	8,445	1		...
Total ...	601,211	.....		.....

The Board have rightly remarked on these surprisingly high rent rates which exceed anything on record in other parts of Bengal, and an explanation should be furnished by the Settlement Officer as to the manner in which these figures

have been reached and the productive capacity of the soil from which such heavy rents can be realised.

26. The total expenditure down to the end of September 1894, as shown in the Director of Land Records' Report, has been—

			Rs.
Survey	...	...	5,21,766
Settlement	...	...	5,22,748
Total	...	...	10,44,514

27. Of the other major settlements, that of the Western Duars was all but finished last year. During 1893-94 the work done consisted of the publication of records in Ambari-Falakata, the confirmation of the settlement in each pargana by the Commissioner, the writing of the completion report and other minor items of office work. The Lieutenant-Governor had expected it to be finished at latest by the end of March, but it lingered on to the middle of October. As stated by the Director of Land Records, the settlement has increased the revenue from Rs. 2,33,999 to Rs. 3,74,901, or 60·21 per cent., and the cost incurred on 504,638 acres cadastrally surveyed and settled, and 269,570 acres surveyed on the scale of 2 inches to the mile, is—

			Average cost per square mile.			Cost per acre.			
			Rs.	Rs.	A.	P.	Rs.	A.	P.
Survey	...	...	3,75,105	310	0	0	0	7	9
Settlement	...	1,68,807	1,32,220	167	12	8	0	4	2
Deduct receipts	...	36,587							
Total	...	...	5,07,325				0	11	11

This settlement will be reviewed in greater detail on receipt of the Settlement Officer's completion report which has not yet been submitted to Government.

28. The traverse survey was begun in August 1893, and 38 square miles were completed in 1892-93. In the season 1893-94, 247 square miles were traversed, 131 square miles cadastrally surveyed and their records partially written, but none were ready for attestation during the field season.

The total cost of the traverse work amounted to Rs. 7,749, or about Rs. 24·4 per square mile, and that of field survey and record-writing to Rs. 12,085 and Rs. 8,204, or Rs. 93·5 and Rs. 62·8 per square mile respectively. No Settlement Officer was employed. Attestation was commenced in August 1894 under an Assistant Settlement Officer, who had been employed till then in inspecting the record-writing; he attested the records of 33 villages covering an area of 21·69 square miles, with 1,591 tenants and 18,925 plots: 12 plots to each tenant. The cost incurred under this head was Rs. 1,145. This was far below the out-turn of work anticipated, the failure being due to the slowness with which the local and untrained amins worked. The operations were supervised by the Deputy Commissioner, Mr. W. R. Bright.

The status of 1,557 out of the 1,591 tenants was recorded as follows:—

CLASS.	Number.	Cultivated area.	Rent.	Rate per acre.
1	2	3	4	5
		Aores.	Rs.	Rs. A. P.
Tenure-holders ...	4	29	117	4 0 0
Settled raiyats ...	934	6,278	6,491	1 0 6
Non-occupancy raiyats ...	692	1,619	1,699	1 0 9
Rent-free holders ...	17	43	...	...
Total ...	1,557	7,969	8,307	...

The large number of non-occupancy raiyats is partly due to the great increase of cultivation in recent years, and apparently some of them are under-tenants of the thikadars.

No progress has yet been made in determining the principles on which the settlement is to be based.

29. The only other settlements which are of sufficient importance for special mention are those of the Tikari Ward's Estate in the district of Gaya and the estates of His Highness the Maharaja of Hill Tippera, in the districts of Tippera and Noakhali.

30. The traverse survey was commenced late in the season 1891-92, and finished in 1892-93: the field survey and record-writing which began in 1892-93 were completed in 1893-94. The survey work done and the cost incurred since the beginning is as follows:—

	TRAVERSE SURVEY.			CADASTRAL SURVEY.			RECORD-WRITING.		
	Number of square miles.	Total cost.	Cost rate per square mile.	Number of square miles.	Total cost.	Cost rate per square mile.	Number of square miles.	Total cost.	Cost rate per square mile.
1	2	3	4	5	6	7	8	9	10
1891-92 ... ..	150	Rs. 13,015	} 77 0	269	Rs. 40,739	140 9	205	Rs. 25,781	125 4
1892-93 ... ..	403·7	29,963		261	41,187	151	348	36,077	102
1893-94 ... ..	...	...		3·7 (Cottilla town survey)	789	213	3·7		
Total ..	553·7	42,978		533·7	82,715		553·7	61,858	

According to the latest account received, the Survey Department have finished their work in these estates at a total cost of Rs. 1,87,551 which, distributed over the total area (553·15 square miles) which came under traverse survey, gives a rate of Rs. 335·4 per square mile, or 8 annas and 4 pios per acre. This high rate is attributed to the great difficulties experienced in the record-writing, the complicated nature of the tenures, and the want of information among the Maharaja's staff as to the areas occupied by the various talukdars and tenure-holders who pay rent to His Highness. These difficulties were aggravated by the Survey officer, who in neglect of orders, gave out no "parchas" to the occupiers of land during the season of 1892-93. The cost has also been somewhat increased by the survey being prolonged over two seasons at the request of the Maharaja.

The Settlement Officer was changed three times during the year owing to unavoidable causes, and the progress made in settlement work was far from satisfactory. The two Assistant Settlement Officers were mainly employed in inspecting the record-writing and deciding petty disputes. No attestation work was done, and no attempt was made to decide, or to lay down a basis for deciding, a test case relating to the two important classes of disputes between the Maharaja and his talukdars; viz., the rate at which a fair rent, based on the rents received by the talukdars from the cultivating raiyats, should be settled; and the status of a talukdar who holds both rent-paying and rent-free lands under the Maharaja, the aggregate area being far larger than the area to which he is entitled by patta. The Lieutenant-Governor visited the Tippera district in the rains of 1894, and thought it necessary to remove the Settlement Officer and place the work in the hands of Mr. J. G. Cumming, c.s. The cost incurred in settlement operations during the year was Rs. 23,406, and from the beginning Rs. 38,804.

31. In the Tikari Estate the traverse survey was commenced in April 1893. The following table shows the progress of survey with the cost incurred:—

Tikari Ward's Estate in Gaya.

	Number of villages.	Number of square miles.	Total cost,	Cost per square mile.
1	2	3	4	5
Traverse survey in 1892-93	374	271	Rs. 15,867	Rs. 58'3
Ditto in 1893-94	406	334	14,240	42'7

Total	...	...	61,104	...
GRAND TOTAL	...	...	91,201	...

The operations will extend over 936 villages, comprising an area of about 711 square miles, and the work remaining on the 1st October 1894 was—

	Villages.	Square miles.
Cadastral survey	50	28
Revision „	50	64
Skeleton boundary survey of mukarrari villages	22	7

There was only one officer of the Settlement Department to supervise the record-writing and decide boundary disputes which numbered 285, of which only 75 were decided. From 1st April 1894, this settlement was placed under the superintendence of Mr. P. C. Lyon, Settlement Officer, Muzaffarpur. The cost under the head of Settlement being Rs. 5,033, the total cost down to 30th September 1894 amounts to Rs. 96,234. Colonel Sandeman reports that the attitude of the inhabitants was generally favourable to the survey.

32. The following table shows the progress of the operations and the cost incurred in the smaller estates dealt with by the Directors of Surveys and Land Records:—

Smaller settlements.

ESTATES.	SURVEY.				SETTLEMENT.												Total cost.	Cost of settlement per acre.

\* This includes expenditure on 10 estates, the settlement of which was finished before the beginning of the year.

† The rest is jungle, rivers, &amp;c., surveyed on the scale of 4 inches to the mile.

33. Besides the above-mentioned operations, the settlement of private estates in the Sonthal Parganas, which was not under the control of the Director of Land Records, continued under Mr. J. A. Craven with three Assistant Settlement Officers. The settlement of five estates comprising 190·3 square miles of cultivated and 200·9 square miles of uncultivated lands had been completed by the end of October 1893. The Pargana of Teur and the Sonthal villages in Parganas Sultanabad and Ambar, comprising 873 villages, with an area of 461·5 square miles, of which 277 square miles are cultivated, were brought under settlement during the year. The survey and record-writing of the entire area were completed as well as the attestation of all but 14 villages. The number of tenants attested was 36,214, with 900,935 plots, including uncultivated land. Fair rents were settled for all these tenants, the amount being raised from Rs. 97,916 to Rs. 1,43,811, ad rise of nearly 50 per cent. The principal work of the Settlement consisted in ousting the foreigners ("Dikkus") who under the Regulations are not allowed to hold land in Sonthal villages, but who, being mostly money-lenders or shop-keepers, had managed by sale mortgage or sub-lease to secure possession of the lands of Sonthal cultivators and had to be evicted unless they had been in possession for many years. These proceedings involved the deciding of over 10,000, civil suits. The records of 249 villages were finally published, and since the close of the year the Settlement Officer has reported the completion of final publication with regard to the rest of the villages. The expenditure incurred during the year amounted to Rs. 71,830, and the total cost since the beginning of the operations to Rs. 1,45,781.

34. In Chapter V of his Report, the Director of Land Records has summarised the correspondence that has passed on the subject of the maintenance of settlement records. Maintenance of settlement records. The question is being discussed with regard to several estates, but no real work has yet been done. As regards Bihar, the proposal of the Bengal Government to make the registration of all mutations compulsory under a penalty, having been approved by Her Majesty's Secretary of State, a Bill has been drawn up and is now before the Bengal Legislative Council. In Orissa, rules for the maintenance of settlement records are under preparation for Khurda, Angul, and Banki, on the basis of the Central Provinces Patwari Rules. In Khurda, the current settlement of which will expire on 7th September 1897, the sarbarah-kars will revise the maps and records for purposes of the new settlement, and they are now being trained under the supervision of Mr. R. C. Ewing, Assistant Superintendent of Survey, who is in charge of the Orissa Survey.

35. As in previous years, Colonel J. E. Sandeman and Mr. W. C. Macpherson have both managed their Departments very successfully, and the Lieutenant-Governor desires his warm acknowledgments to be conveyed to them for their indefatigable energy and enthusiasm. Lieutenant R. T. Orichton has shown great ability in his conduct of the survey operations in North Bihar, and some valuable reforms in the details of procedure have been suggested and carried out by him. The following officers deserve the special thanks of Government for their successful conduct of the settlement operations during the year:—

*Settlement Officers.*

Mr. C. G. H. Allen.  
 „ E. G. Colvin.  
 „ P. C. Lyon.

*Assistant Settlement Officers.*

Mr. J. G. Cumming.  
 „ S. L. Maddox  
 „ R. Nathan.

The names of the other Assistant Settlement Officers favourably mentioned by Mr. Macpherson at paragraph 159 of his report will be noted in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,  
*Secretary to the Government of Bengal.*

# POLLUTION OF THE WATER OF RIVERS IN BENGAL.

JUDICIAL.

*Calcutta, the 16th April 1895.*

RESOLUTION—No. 2151J.

READ—

A letter No. 1074, dated the 2nd February 1895, from the Sanitary Commissioner for Bengal on the practice of casting dead bodies into the rivers of Bengal.

The attention of Government has repeatedly been called to the highly obnoxious and insanitary practice which prevails among the poorer class of Hindus of casting dead bodies in the river as well as of staking their dead in the beds of rivers in order to avoid the expense of cremation or burial in prescribed places. The subject is one which came prominently to the notice of the Commission (Dr. Lidderdale and Messrs. Paul and Wickes) appointed in 1881 to enquire into the causes of the epidemic fever of Nadia, and they referred to it in the following forcible and graphic terms:—

“A very large, perhaps the largest, part of the water-supply of the district is from dead rivers, and nothing can be worse than their condition.

*Casting of Corpses.*

Corpses are freely thrown into them as long as there is sufficient water to cover the dead body. In many parts of the district no pretence of cremation was observed, and burning their dead among the lower classes of Hindus is evidently not now the custom. Near Meherpur, on the Bhyrub, just above the municipality, where a fishing weir had created a pool, a peculiar oily scum, very evidently of animal origin, was plentiful, clearly betokening that many corpses had been thrown there, while all along the course of this stream there was further evidence of the practice. Near Akundaberia, the lake that is now the source of the Cobaduck was manifestly a favourite spot for this immersion of corpses, for dozens of turtles came swimming to where we happened to stop to converse with the villagers, evidently mistaking our gathering for a funeral party, and so expecting to obtain a meal.

“Nothing can be more horrible or more dangerous than this practice of throwing the bodies of the dead—many perhaps victims of contagious disease—into the drinking water-supply of the survivors. At all costs it should be prevented. The extracts appended from communications received from Babu Shama Churn Chatterjee and other inhabitants of Durgapur show that the more intelligent natives are fully alive to the danger, but the mass of the people are utterly careless and thoughtless. At a place called Bara Solooah the villagers took credit to themselves for throwing their dead into the Mysore stream below their village, but only smiled when it was pointed out that this stream, a mile lower down, flowed past Kaloopole and supplied its inhabitants with water.

“The custom has long existed, but in this time of excessive mortality and sickness has enormously increased, probably owing to the survivors being unfitted by ill-health or prevented by poverty from obtaining sufficient fuel. The scarcity of fuel is, no doubt, the great obstacle to proper cremation; forests and jungles have long since disappeared, and the sole supply available is derived from the village lands. The amount belonging to each village is insufficient in ordinary years, and therefore cannot possibly meet the demand of periods of sickness. The difficulty is further complicated in some places by private rights in existing burning ghâts, which add greatly to the cost of cremation. Altogether the question is so involved that we confess that after careful thought we are unable to suggest any really satisfactory solution.”

2. During 1883 and 1884 there were constant complaints to Government of the great insanitary inconvenience occasioned by dead bodies in the rivers of the Nadia district, and especially of the Chooadangah sub-division, but no effectual steps were taken to remedy the evil.

3. In Calcutta itself the number of dead bodies and carcasses floating in

Corpses. Carcasses of animals.

1893	72	1,932
1894	79	2,179

the river Hooghly and dealt with by the Calcutta River Police has of recent years shown a tendency to decrease, and although the actual decrease as shown by the figures given in the margin is not great if the past ten or fifteen years only be considered, there can be no doubt that a very different state of things exists now from that which was formerly the case. It was reported by Mr. Wauchope, the Commissioner of Police in 1864, that no less than 4,187 dead bodies of human beings were thrown into the river in Calcutta during 1863, of

which 1,690 were from the various hospitals. It was estimated that in addition

to this number, nearly 100 bodies a day, which had floated down the river from neighbouring districts, were sunk by the establishment entertained for the purpose. An agitation was at that time set on foot, and after much public discussion and correspondence with the Justices of the Peace for the Town of Calcutta, a body which exercised functions corresponding to those of the Municipal Commissioners of the present day, orders were issued by Sir Cecil Beadon's Government which concluded with the following words:—

No. 1762, dated 16th March 1864.

“The Lieutenant-Governor desires to congratulate the Justices on the great advance made in practical sanitation by providing for the cremation of the bodies of paupers, and for the absolute prohibition of the practice of throwing the corpses of men and animals into the river. In 1854, when the Government desired to put a stop to this practice, it was represented that such a prohibition would, as regards the bodies of Hindus, be regarded as an unwarrantable interference with religion; but now the practice is condemned by the unanimous voice of the Native Justices, and its prohibition will accordingly be carried out with general consent. The Commissioners of the Burdwan and Nadia Divisions have already been desired to prevent the practice of throwing dead bodies into the river or into the nullahs leading to it.”

4. The present state of things therefore is very different from that which

Mr. F. M. Hallday, Chairman of the Port Commissioners.  
Mr. A. Smith, Commissioner of the Presidency Division.  
Mr. R. H. Wilson, Commissioner of the Burdwan Division.  
Mr. H. J. S. Cotton, Commissioner of Police, Calcutta.  
Dr. R. Ludderdale, Sanitary Commissioner.

prevailed thirty-one years ago, and the improvement is primarily due to the vigorous executive measures taken by the police and municipal authorities. The evil, however, still continues on a serious scale, and in 1887 a Conference consisting of the officials noted on the margin assembled in Calcutta under the orders of Sir Stuart Bayley to consider and

report on the practice of throwing corpses and carcasses into the river Hooghly. It was shown to the satisfaction of that Conference that the corpses, which were generally those of Hindus whose mouths had been scorched with fire, came from places above the town of Calcutta and did not belong to Calcutta itself. The members of the Conference recorded their opinion that effective control over the practice would be a matter of great difficulty, but suggested that a proclamation should be issued under sections 188, 290, and 291, Indian Penal Code, forbidding bodies being thrown into the river without cremation, and that all riparian municipalities should be instructed to publish a special bye-law on the subject.

5. On receipt of this recommendation, the Lieutenant-Governor consulted the Law Officers of the Crown, and eventually directed the publication of the following notice in convenient places in the Burdwan and Presidency Divisions:—

“Any person found throwing a corpse or a carcass into the river Hooghly or the channels communicating with it, will be prosecuted under section 290, Indian Penal Code. The Government have been advised that the practice causes danger to health, and is therefore a common danger to the public and to the people in general who dwell in the vicinity of the river or the channels.”

It cannot be said that the publication of this notice has produced much effect, so far as the corpses of human beings are concerned; but the number of carcasses of animals floated on the river has evinced a marked reduction. Prosecutions have been sparingly instituted, and the law has been applied with discretion, but in almost all cases convictions have been obtained.

6. The Sanitary Commissioner has now pressed upon the Government that similar notices to those published in the neighbourhood of Calcutta should be issued in all divisions of Bengal, and that a clause should be added forbidding the staking of dead bodies in the beds of rivers, khals or other water-courses which are resorted to for drinking or culinary purposes. He proposes also that all municipalities situated on rivers or other water-courses should be instructed to frame a bye-law on the subject, and that in rural tracts the provisions of section 290 of the Indian Penal Code should be rigorously enforced through the agency of the police, the village chaukidars, and the panchayets.

7. Before taking any action on these proposals, the Lieutenant-Governor desires to be favoured with the advice of Commissioners and District Officers as well as of associations and native gentlemen, official and non-official, who may be in a position to speak with authority on the subject. The practice of throwing dead bodies into a river is no doubt primarily due to the poverty

of the poorer classes of Hindus who cannot afford to completely incinerate a corpse, and therefore merely scorch the lips of a dead body and then commit it to the river. The practice of staking bodies in the beds of rivers is not necessarily confined to the poorer classes, but is adopted after partial incineration in order to consign the unburnt remains to the sacred stream. Both practices are probably now far less in vogue than formerly—a change due partly to police interference and partly to modified customs and habits among the people. Such a change must no doubt be very gradual when it extends over a whole province, but there is ample evidence in the records of Government to show that the practices referred to have in many cases become highly repugnant to Hindus themselves. The members of the Nadia Fever Commission, in the extract from their report already quoted, refer to a communication received from Babu Shama Churn Chatterjee and other inhabitants of Gosain Durgapur on the subject, and the Lieutenant-Governor has caused these notes to be annexed to this Resolution as affording a favourable illustration of the opinions entertained by well-qualified and educated native gentlemen of the present day. His Honour does not wish to take measures which will be in direct opposition to Hindu sentiment. But he believes that the feeling of opposition to such steps as those proposed by Dr. Gregg is gradually dying out, and that an influential body of opinion would not hesitate to support their adoption. It is principally with a view to ascertaining opinion on the subject that this Resolution has been recorded. Commissioners and District Magistrates are requested to ascertain and report on the actual practice followed in their divisions and districts, and to elicit public opinion on the proposals put forward by the sanitary authorities to put a stop to the evil wherever it exists. With the same object the principal representative associations in the province will be consulted by Government direct.

8. The legal aspect of the question raises considerations of difficulty which were discussed on receipt of the report of the Conference of 1887, and in order to facilitate the present discussion of the subject, the opinion of the Honourable Advocate-General, dated 10th December 1888, is annexed, as a second appendix to this Resolution.

ORDERED that a copy of this Resolution be forwarded to all Commissioners, and to the Commissioner of Police, Calcutta, for information, and for the favour of a report.

Ordered that a copy of this Resolution be forwarded to the leading Associations for information, and for the favour of careful consideration and report to Government.

Ordered that a copy of this Resolution be forwarded to the Inspector-General of Police, and to the Sanitary Commissioner for Bengal, for information, with reference to his letter No 1074, dated 2nd February 1895.

Ordered that a copy of this Resolution be forwarded to the Municipal Department of this office for information and for communication to the Sanitary Board.

Ordered also that a copy of this Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,  
*Chief Secretary to the Govt. of Bengal.*

## APPENDIX A.

## POLLUTION OF RIVER WATER.

*Extract from Notes on the probable causes of the increase of fever in and about Gosain*

*Durgapur, by BABU SHAMA CHURN CHATTERJEE, B.A., M.B.*

THE pollution of the only source of wholesome water is, we humbly beg to suggest, opposed to all laws—social, religious, and moral. It is a matter deeply to be regretted that the lower classes of the people have gradually got into the bad habit of throwing their dead bodies into the river water without being in any way checked. No argument is necessary to condemn such an objectionable practice. It should at once be put down by legislative measures. Our *Shastras* strictly enjoin that the dead bodies of men and beasts should not, under any circumstance whatever, be cast into the river. “If a Hindu (*Joogis* and *Boiragees* excepted) throws the remains of his deceased relative into the river in an unburnt state, he shall lose his caste, and not be allowed to perform the *Sradh* and other religious rites for the benefit of the deceased’s soul. Only children under two years of age are to be buried in the earth.” So say our wise forefathers and social legislators. Annexure A contains verses from the texts of Manu, Bramhopuran, Smirtha, and Jagannath Tarkopunchann, as collated by Pundit Sreenath Siromoni of Durgapur. Such a consensus of opinion bearing the authority of even Manu himself deserves the respectful consideration of every enlightened Government. All these high authorities unanimously declare that the contamination of drinking water by throwing dead bodies into it should be strictly interdicted under penalty of forfeiture of caste. Our countrymen cannot in consonance with the injunctions of their own *Shastras*, raise the voice of opposition, if Government should consider it worth its while to interdict this hateful practice. Some may say that such interdiction by legal measures would press rather heavily upon the poorer classes of Hindus. Of course, Muhammadans are altogether out of question. My only answer to such objection would be that the proposed legislation would be entirely in keeping with the teachings of our *Shastras* and the laws of sanitary science. It is a laudable custom among our well-do-do countrymen, especially in villages, that whenever a poor Hindu requests them for a supply of fuel wood to burn their deceased relatives, they immediately and unhesitatingly comply with the poor man’s request. The very poorest people, who cannot afford to pay for the trifle of a funeral expense, have this resource to fall back upon to enable them to discharge their last debt to dead humanity. It is therefore to be reasonably expected that Government will not permit them to persist in a course of mal-practice based upon an act of sacrilege, and opposed to the simplest rules of hygiene and common sense.

-----

*Translation of Sanskrit passages.*

THERE are three different rites which should be performed in reference to a deceased person. They are thus referred to in the *Suddhikārikā*:—“There is the preliminary rite, the intermediate rite, and the subsequent rite. The preliminary rite is described as one which commences with cremation, &c., and ends with the offering of the *Pindas* (funeral cakes).” It appears from texts like these that without cremation no right accrues to the intermediate and subsequent rites, inasmuch as he alone who has had his preliminary rite performed is entitled to the subsequent one. Hence it follows that the purificatory rite of cremation is required by all. But an objection may arise as to what is to be done with children who have not completed their second year, as cremation in their case is prohibited by the verse that “cremation should be performed to males and females alike above the age of two years.” This objection is futile, since burial in the ground is provided by *Yajnya Valkya* in the verse “those who are under two years of age should be buried, and no libation of water is to be poured for them.” From the principle that the meaning of the *Shastras* determined in one place is to be adopted in other places, if there be nothing to the contrary, burial in the ground is adopted in the case of *Jugis* and *Vaishnabs*; and from the same principle it follows that those who have no cremation should be buried in the ground.

The water of tanks, &c., gets defiled by contact with dead bodies. Thus the *Brahma Purana*:—“The bodies of those animals whose meat should not be used for food defile the water of tanks, wells, and reservoirs by coming in contact therewith.” Bodies means carcasses, because in the next verse the word *kunapa* or carcase is used.

## APPENDIX B.

## OPINION.

It is desired to put a stop to the practice which exists of throwing corpses and carcasses into the Hooghly, on the ground that the practice causes danger to health, and it has been suggested by the Conference appointed to consider the matter that a circular should be issued under sections 188, 290, and 291 of the Indian Penal Code, and by the Deputy Legal

Remembrancer that a notification should be inserted in the Official Gazette under sections 134 and 144 of the Code of Criminal Procedure, forbidding the practice.

Section 188 of the Indian Penal Code provides that whoever knowing that, by an order promulgated by a public servant *lawfully empowered to promulgate such order*, he is directed to abstain from a certain act, disobeys such direction, shall, if such disobedience causes, or tends to cause, danger to health, be punished.

By section 268 a person who does any act which causes any common danger, injury, or annoyance to the public or to the people in general who dwell or occupy property in the vicinity, is guilty of a public nuisance.

Section 290 provides the punishment for a public nuisance not otherwise punishable. Section 291 provides the punishment for the repetition or continuance by any one of a public nuisance having been enjoined by any public servant who has lawful authority to issue such injunction not to repeat or continue such nuisance. Now, assuming that the practice of throwing corpses and carcasses into the Hooghly causes or tends to cause danger to health, before section 188, Indian Penal Code, can be brought into requisition for the purpose of suppressing the practice, an order would have to be promulgated by a public servant *who is lawfully empowered to promulgate such order*, directing the public to abstain from the practice. Is any public servant lawfully empowered to promulgate such order? In order to answer this question, it is necessary to ascertain with what powers of promulgating orders in cases of nuisances the law invests Magistrates. The Code of Criminal Procedure invests them with all the powers which they possess. Neither Chapter X of that Code, which deals with public nuisances, nor Chapter XI, which empowers certain Magistrates to issue temporary orders in urgent cases of nuisance (but to the public generally only when frequenting or visiting a particular place) in my opinion authorises the promulgation of such an order as it is desired to address to the public in the present case. And I may add that by no other portion of the Code are they so empowered. I am therefore of opinion that no Magistrate is lawfully empowered to promulgate an order addressed to the public directing them to abstain from throwing corpses or carcasses into the Hooghly. The only course which appears to me to be open to Government is to cause notices to be exhibited in convenient places, stating that any person found throwing a corpse or a carcass into the Hooghly will be prosecuted under section 290 of the Indian Penal Code, Government being advised that the practice causes danger to health, and is therefore a common danger to the public and to the people in general who dwell in the vicinity of the river.

G. C. PAUL.

The 10th December 1883.

## WEATHER AND CROP REPORT.

For the week ending the 15th April, 1895.

**Burdwan.**—Rainfall at Sadar '86. Weather stormy. *Rabi* harvest completed. Price of common rice varies from 10 to 19 seers a rupee in the district.

**Midnapore.**—Rainfall '18. Weather stormy and cloudy, but now seems to have cleared. *Boro* (spring rice), sugarcane and indigo are doing well. Fodder and water sufficient. Rice sells from 17 to 22 seers per rupee.

**24-Parganas.**—Rainfall at Sadar '63. Weather seasonable. No crops on the ground with the exception of *boro* paddy in parts of thana Bankipur in the Diamond Harbour subdivision. Ploughing going on for early crops. Condition of cattle good. Fodder and water sufficient. Rice sells at—

	Srs.				
Sadar	...	...	...	12 to 13	} per rupee.
Barasat	...	...	...	15	
Basirhat	...	...	...	20	
Diamond Harbour	...	...	...	15	

**Murshidabad.**—Rainfall '11. Weather hot; cloudy. Harvesting of *rabi* crops nearly finished. Sowing of *bhadri* continues. Rain much needed. Fodder sufficient. Price of common rice 15 to 17 seers per rupee.

**Khulna.**—Rainfall at Sadar '11, Bagerhat '19, Satkhira 1'00. Weather hot. Harvesting of *rabi* crops over. Fodder sufficient. Water getting scarce at Satkhira. Rice sells at from 18 to 22 seers per rupee.

**Dinajpur.**—Rainfall at Sadar '02. Weather cloudy. Jute and *bhadri* cultivation going on. No outbreak of cattle-disease, nor any complaint for fodder and drinking water.

**Rangpur.**—Rainfall '23. Weather cool and cloudy. Sowing of paddy and jute continues. Prospects favourable.

**Pabna.**—Rainfall 2'77. Weather cool and pleasant. The rain has done much good to the standing crops. Sowing of paddy and jute is going on. Common rice is selling at from 14 to 17 seers per rupee. Fodder and water sufficient.

**Dacca.**—Rainfall 1'82. Weather cloudy and rainy. Prospects of standing crops fair. Ploughing and sowing of jute and paddy continue. Common rice sells at 18 seers per rupee. No cattle-disease. Fodder available.

**Chittagong.**—Rainfall 1'02. Days hot, nights and mornings cool. Recent rain has done good to crops. Prices steady. Water and fodder sufficient. Cattle-disease continues.

**Patna.**—Rainfall nil. Harvesting of *rabi* crops almost finished; threshing going on. Opium weighment commenced on 10th. Common rice selling at 18½ seers per rupee.

**Gaya.**—Rainfall nil. Threshing of *rabi* crops and weighment of opium continue. Mango doing well. Prices about normal. Water and fodder sufficient.

**Champan.**—Rainfall nil. *Rabi* harvested finished. Weighment of opium going on. Common rice selling at 16 seers a rupee. Fodder and water for cattle sufficient.

**Darbhanga.**—Rainfall nil. Weather getting warm. *Rabi* harvest almost completed. Early rice and *mung* are being sown. Price of common rice stationary. Fodder for cattle sufficient.

**Bhagalpur.**—Weather unsettled and cool with strong easterly winds. *Rabi* harvest over. Indigo thriving. Rain wanted for *bhadri* cultivation. Fodder and water sufficient.

**Purnea.**—Rainfall 12. Weather generally cloudy with west wind at first and then east wind, but little or no rain. Rain is now much needed. Harvesting of *rabi* crops nearly completed; the outturn will be about 15 annas. Jute and *bhadri* and *aghani* paddy are being sown. Price of common rice 18 to 25 seers per rupee. Fodder and water sufficient.

**Cuttack.**—Slight rain. Weather cloudy. *Dahua* (spring rice) harvest continues. Ploughing for next rice crop commenced in places where rain was sufficient. Condition of cattle good. Fodder sufficient. Rice sells at from 11 seers 13 chitaks to 26 seers 4 chitaks per rupee.

**Hazaribagh.**—Weather seasonable. Slight rain in places. *Mahua* harvest in progress with good prospects. Fodder scanty. Water sufficient. Common rice selling at from 14 to 20 seers per rupee.

**General Summary.**—Rain accompanied with thunderstorms fell generally over Bengal Proper and has done good. It was heavy in the Western districts, where it was especially wanted. In Bihar there was no rain and very little in Orissa and Chota Nagpur. The preparation of the land and the sowing of jute and of the *bhadoi* crops is going on. More rain is required in parts. Spring rice and indigo are doing well. In Orissa the spring rice is being harvested. The harvesting of the *rabi* crops is practically over, and the general result is good. The weighment of opium continues. The mango crop in Bihar promises well. Cattle-disease continues in Chittagong. The fodder-supply in Hazaribagh is still scanty. The price of common rice is generally steady with a slight tendency to fall.

By order of the Lieutenant-Governor of Bengal,

\* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the year. The humidity of the atmosphere is expressed in percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean of the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question is the district mean rainfall. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 13th of April 1895.

last ten years. The variations are *negatives* when the mean of the week is less than the corresponding normal mean, and *positives* when greater. numbers denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal means of the district are the numerical average of the rainfall returned received in the district, i.e., from total rainfall at the subdivision during the past ten years.

Explanation.—Nil indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0.10 inch of rain has fallen.

# SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 13TH OF APRIL 1895.

At the end of the previous week cool settled weather had become established over the greater part of Bengal, and an unusual distribution of pressure obtained. Highest pressure was in the north of the province and from there readings slowly diminished towards the south-east, the lowest being in Burma. This distribution continued unaltered for a day or two at the beginning of the present week, after which a slow steady fall over Bengal and an equally slow rise in Burma and the east of the Bay restored the normal arrangement. While the low readings continued in Burma, the wind circulation, following the pressure gradient, was westerly and at times northerly, but as the change mentioned above proceeded, the westerly winds changed to southerly and then to south-easterly, especially in the eastern half of the province. Probably, in consequence of the unusual pressure arrangement and the irregular wind circulation, local storms have occurred in considerable numbers and scattered showers have fallen in all districts except Bihar and Chota Nagpur, where rainfall has been almost entirely absent. Though the thunderstorms have been numerous, the showers accompanying them have been light except in East Bengal, where several stations have received heavy falls. A more decided result of the local disturbances is seen in the temperature which was relatively low at the beginning and remained several degrees below the normal throughout the week, both during the day and the night.

**Pressure.**—On the 7th, the first day of the week, pressure was '07" in excess in Bihar and '07" in defect in the south of Burma, while readings in Bihar were more than a tenth of an inch higher than those at Diamond Island, Bassin and Rangoon. This arrangement became more pronounced on the 8th, as a rise prevailed, of greater amount in the north than the south. The return to the normal distribution began on the 9th, when there was a slow fall over Bengal and a slow rise in Burma and the east of the Bay. This slow change continued on the 10th, 11th, and 12th, on the last of which dates the arrangement was reversed, there being a small defect in the west of Bengal, and a small excess in Burma. On the 13th and last day of the week a general and in places a rapid rise of pressure prevailed, so that resulting readings were highest in Burma and diminished rather quickly towards Bihar, causing a strong easterly circulation of winds over the whole province.

**Temperature.**—At the beginning of the week there was defect everywhere in temperature except in East Bengal, some stations of which had a small excess. The defect was about 2° except at the extreme southern stations, where it varied from 5° to 9°. On the 8th defect varied from 0° in North Bengal to 10° in South-East Bengal. During the remainder of the week the difference from the normal was not so large and more uniform except on the 13th, when there was a large defect over the whole province, generally varying between 5° and 10°. In consequence of the continued low temperature the means for the week are below the normal in all districts by amounts varying from 2°·3 in North Bengal to 4° in Orissa and Chota Nagpur.

The actual temperatures registered during the week and their variations from the normal temperature for the season are clearly seen in the table below, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the same period:—

*Table showing the excess or defect of the actual mean temperature from the normal for the week ending Saturday, the 13th of April 1895.*

			Normal mean maximum temperature for the week ending 13th April.	Actual mean maximum temperature for the week ending 13th April 1895.	Variation of actual mean from the normal. **Rainfall.**—Heavy showers have fallen in East Bengal, and numerous but generally very light showers in all the other districts except Bihar and Chota Nagpur. The mean fall in East Bengal is 1.5 inches, in South-West Bengal .65 inch, North Bengal .46 inch, and in Orissa .32 inch. These are all above the normal for the season by amounts varying from .04 inch in Orissa to .67 inch in East Bengal.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 13th of April 1895 :—

METEOROLOGICAL DIVISIONS	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st of April 1895.

The average fall of the corresponding period for 24 years, Surveyor-General's Office	...	...	...	...	0.85
					3.40

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; t, thunder; <, lightning; R, thunderstorm; p, passing temporary showers.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;  
Calcutta, the 15th April 1895.

J. H. GILLILAND,  
For Meteorological Reporter to the Govt. of India.

 The HON'BLE SURENDRANATH BANERJEE.  
 The HON'BLE L. GHOSE.  
 The HON'BLE MAULVI SERAJUL ISLAM KHAN BAHADUR.  
 The HON'BLE W. C. BONNERJEE.  
 The HON'BLE J. G. WOMACK.  
 The HON'BLE MAULVI MUHAMMAD YUSUF KHAN BAHADUR.  
 The HON'BLE C. E. SMYTH.

## THE BENGAL PROVINCIAL SERVICE BUDGET FOR 1895-96.

The Hon'ble Mr. BOURDILLON moved for the discussion of the Bengal Provincial Service Budget for 1895-96.

The Motion was put and agreed to.

### EXCISE REVENUE.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

The Excise Revenue shows an increase in the revised estimates for 1894-95, and in the budget estimates for 1895-96. The receipts from license and distillery fees and duties for the sale of liquors and drugs amounted to Rs. 94,90,000 in the revised estimates for 1894-95, showing an increase of Rs. 3,55,000 over the actuals of 1893-94. Will the Government be pleased to state how much of this increase is due to Outstills? Will the Government be pleased to state the number of Outstills in 1893-94 and the number in 1894-95, district by district, if practicable?

The Hon'ble Mr. BOURDILLON replied:—

"The information asked for cannot now be furnished. The receipts from Outstills in 1893-94 can be given separately, but those for 1894-95 cannot be shown, as the year has not closed. In framing revised estimates, separate estimates are not prepared of receipts under the different heads, so that it is impossible now to give details of the estimated total of Rs. 94,90,000 in 1894-95.

"The number of Outstills in 1893-94 was 2,034; the number actually open in 1894-95 is not yet known to Government. The distribution of Outstills by districts will be found in Table V appended to the Board's Excise Administration Report for 1893-94, to which I beg to refer the Hon'ble Member."

### OPERATION OF THE OUTSTILL SYSTEM.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

Whether the Outstill system, which was condemned by Parliament some years ago and abolished in most parts of Bengal, has been reintroduced in some parts of some districts within the last three years; whether a proposal to reintroduce that system into some parts of the Bankura district is now before the Board of Revenue or the Government of Bengal; and whether, in consideration of the general condemnation of the Outstill system by the public and by the House of Commons, the Local Government has considered it necessary, or will consider it necessary, in future, to consult local opinion, or public bodies representing public opinion, before reintroducing the Outstill system into any part of any district where it has once been abolished?

The Hon'ble Mr. BOURDILLON replied:—

"During the last three years Outstills have been reintroduced in part of one district only, viz., Cuttack, where in 1893 six Outstills were sanctioned in a jungly part of the district remote from the Sadar distillery and bordering on the Gurjat frontier.

"A proposal was made to Government to reintroduce the Outstill system into certain sparsely populated tracts of the Bankura district, but the Lieutenant-Governor has already negatived the proposal. The Government of Bengal is always careful to ascertain the bent of local feeling and all the circumstances of the locality before introducing a change of the kind described; but in jungly localities, such as those referred to as being tracts to which the Outstill system is suitable, it can hardly be said that public feeling exists."

### RECEIPTS FROM COURTS OF LAW AND STAMPS.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

The receipts from Courts of Law have been estimated at Rs. 8,90,000; the expenditure under the same head is estimated at Rs. 90,32,000. The

receipts from Stamps are estimated at Rs. 1,25,25,000. Three-fourths of this sum are credited to the Provincial Funds. If the Stamp Revenue were credited to the Courts of Law, there would be a surplus balance. This, however, is not done; the deficit in connection with the Courts of Law is met from the general revenues of the province. Will the Government consent to credit the receipts under Stamps to Courts of Law, and devote a reasonable percentage of the surplus balance to the improvement of the Courts of Law by adding to the number of Munsifs, raising the pay of the ministerial establishment, and by such other means as to the Government may seem fit?

The Hon'ble Mr. BOURDILLON replied :—

“The Lieutenant-Governor is unable to give any such assurance as that asked for. All Provincial Receipts are credited to the Provincial Funds from which expenditure is sanctioned under the various heads according to the requirements and the relative importance of each. The theory that certain items of revenue should be set apart and hypothecated to certain items of outlay cuts at the root of Provincial Finance, and would render it absolutely unworkable. It is difficult as it is in most years to make revenue and expenditure balance each other, and it would be impossible, or intolerably inconvenient even if possible, to make an innumerable number of sub-heads balance each other, and to earmark every item of revenue as applicable only to the corresponding item of expenditure.”

#### IRRIGATION WORKS.

The Hon'ble BABU SURENDRANATH BANERJEE asked :—

The working expenses under “Irrigation” show a steady tendency to increase. The working expenses were Rs. 14,55,000 in 1893-94; in 1894-95 they were Rs. 14,67,000; for 1895-96 they have been estimated at Rs. 14,90,000. Further, the receipts from Irrigation under all heads show a steady decrease. The actuals for 1893-94 were Rs. 25,45,000, the revised estimate for 1894-95 was Rs. 23,43,000, which is Rs. 88,000 less than the budget estimate for the same year, and the budget estimate for 1895-96 has been fixed at Rs. 23,86,000. Explanation is solicited as to the increase in the working charges and the decrease in the receipts under this head?

The Hon'ble Mr. BOURDILLON replied :—

“The estimated increase in working expenses during 1894-95 and 1895-96 is due to the heavy cost which has been, and will be, incurred in making good the damage done to the Midnapore Canal by the cyclone of May, 1893.

“The estimated falling off in the receipts is due to the fact that the figures of 1893-94 were abnormally inflated by larger traffic in the Orissa Canals and by the recovery of old arrears in the Midnapore Canal. These facts have already been stated in the last sentence of paragraph 4 of my Explanatory Note.”

#### SALE OF QUININE BY POSTAL PEONS.

The Hon'ble BABU SURENDRANATH BANERJEE asked :—

The receipts from Cinchona Plantation have been estimated for 1895-96 at Rs. 1,45,000, which represents an increase of Rs. 20,000 over the actuals of 1894-95. The explanation given is “Increase anticipated in consequence of the more extensive sale of Quinine in pice-packets.” Will the Government be pleased to take into consideration a suggestion which has been made to facilitate the more extensive sale of Quinine, viz., that postal peons distributing letters should be furnished with the packets for sale?

The Hon'ble Mr. BOURDILLON replied :—

“The suggestion that postal peons distributing letters should be entrusted with packets of Quinine for sale is not thought to be likely to lead to success. It would entail an amount of account-keeping and pecuniary responsibility on the part of the postal peons to which the Post Office Department would probably

object. The Lieutenant-Governor is anxious to extend the sources of supply by utilising other means besides those of the Post Offices, such as isolated shops, railway stations, &c., but he does not consider that it would be desirable to entrust the packets, which are easily injured by damp, to the care of itinerating peons."

### VETERINARY RECEIPTS.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

A sum of Rs. 5,000 is estimated under "Veterinary Receipts" A sum of Rs. 1,47,000 is estimated under "Miscellaneous" under Head XXV (Miscellaneous). Will the Government be pleased to give some details as to these items?

The Hon'ble MR. BOURDILLON replied:—

"The estimate of Rs. 5,000 under 'Veterinary Receipts' represents, in round numbers, the total payments expected on account of horses and horned cattle to be treated at the Veterinary Institution, Belgachia, during 1895-96.

"The principal items in the total of Rs. 1,47,000 estimated under 'Miscellaneous' receipts are the following:—

	Rs.
(a) Recoveries from Local Funds towards the cost of offices of control and account ... ..	80,000
(b) Fees and fines in Revenue Courts ... ..	38,000
(c) Recoveries of law charges other than those in pauper suits ... ..	9,000

"The remaining items are of small amount."

### RECOVERIES ON ACCOUNT OF THE DANKUNI DRAINAGE SYSTEM.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

Receipts from "Recoveries on account of capitalized maintenance charges of the Dankuni Drainage System" (Head XXX of Appendix A) have been fixed at Rs. 4,000 in the estimates for 1895-96. The actuals for 1893-94 were Rs. 17,000. The revised estimates for 1894-95 came up to Rs. 15,000. An explanation is solicited as to why the estimate for 1895-96 should be fixed at Rs. 4,000 only?

The Hon'ble MR. BOURDILLON replied:—

"The total amount recoverable on account of the capitalised cost of the Dankuni Drainage Scheme was Rs. 65,344, which was to be realised in six years, beginning with 1891-92. It is calculated that up to the end of 1894-95 Rs. 60,000 will have been realised: of the balance of Rs. 5,344, it is proposed to recover Rs. 4,000 in 1895-96 and the remainder in 1896-97."

### EXCHANGE COMPENSATION ALLOWANCE.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

The estimates for 1895-96 under the head of Charges of District Administration show an increase of Rs. 71,000 over the revised estimates for 1894-95 and an increase of Rs. 1,38,000 over the actuals of 1893-94. In the Explanatory Note it is stated that the increase is chiefly for Exchange Compensation Allowance. Will the Government state how much of the increase is due to Exchange Compensation Allowance, and how much to the other charges mentioned in the Explanatory Note?

The Hon'ble MR. BOURDILLON replied:—

"In the estimate for 1895-96 under the head stated there is an increase over the actuals of 1893-94 of nearly a lakh under Exchange Compensation Allowance.

The remaining increase of Rs. 38,000 is due to the development of the Certificate Department (Rs. 10,000), to larger operations in surveying waste lands (Rs. 16,000), and to smaller items. It is impossible to compare the details of the budget of 1895-96 with those of the revised estimate of 1894-95, because they have not yet been ascertained."

### AMOUNT OF EXCHANGE COMPENSATION ALLOWANCE IN BENGAL.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

Will the Government state the total amount payable for Exchange Compensation Allowance for the Bengal Establishment for 1895-96? What was the total amount paid in 1894-95?

The Hon'ble MR. BOURDILLON replied:—

"The revised estimate of the sums to be paid from Provincial Revenues in the shape of Exchange Compensation Allowance is Rs. 9,19,000 for 1894-95, and the budget estimate for 1895-96 is Rs. 11,43,000. The actual figures for 1894-95 are not yet available."

### LOCAL ALLOWANCE TO DIRECTOR OF LAND RECORDS AND AGRICULTURE.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

In the Estimates for 1895-96 the expenditure under "Land Records and Agriculture" is put down at Rs. 90,000. Under the revised estimates for 1894-95, the expenditure was Rs. 87,000, and the actuals for 1893-94 came up to Rs. 81,000. The expenditure is thus steadily on the increase. In the Explanatory Note it is stated that a part of this increase is due to the payment of Local Allowance to the Director of Land Records and Agriculture. Will the Government be pleased to state what is the amount of the allowance, why is it paid, and what is the nature of the service for which it is paid?

The Hon'ble MR. BOURDILLON replied:—

"The amount of the Local Allowance payable to the Director of Land Records and Agriculture is Rs. 250 a month in addition to the pay of his grade. Though called Director of Land Records, he is in fact Settlement Commissioner, and the allowance is drawn by him in that capacity."

### CHARGES FOR SUPERINTENDENCE UNDER EXCISE.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

Under "Excise" the charges for Superintendence have steadily increased since 1893-94. The actuals for 1893-94 were Rs. 64,000; the revised estimate for 1894-95 put the expenditure at Rs. 66,000; the budget estimates for 1895-96 raise the amount to Rs. 73,000. It is explained that Rs. 4,000 have been provided for Exchange Compensation Allowance, and Rs. 1,500 for Local Allowance of Rs. 60 per mensem to each of the two Inspectors. Explanation is solicited as to why this Local Allowance to Inspectors should be granted? Was no Exchange Compensation Allowance included in the revised estimate of 1894-95? If such allowance was included, what was the amount? Allowing in the budget estimate of 1895-96 Rs. 4,000 as Exchange Compensation Allowance, and also the allowance granted to Inspectors, there would still be left a balance of about Rs. 1,500, representing increased charge of Superintendence, in regard to which explanation is solicited?

The Hon'ble MR. BOURDILLON replied:—

"The Local Allowance which it is proposed to give to the Inspectors of Excise is granted to compensate them for the loss which is shown to be entailed

upon them when travelling under the existing rules of travelling allowance applicable to their case.

"No Exchange Compensation Allowance was estimated under this Head in 1894-95.

"The difference between the budget of 1895-96 and the revised estimate of 1894-95 is an increase of Rs. 7,000. Of this sum, Rs. 5,500 are accounted for as the Hon'ble Member points out. The remaining Rs. 1,500 of the advance are due to the adjustment of the pay of one of the Inspectors, which was formerly debited under a separate minor head."

### BOARD OF REVENUE EXPENDITURE.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

Under "General Administration", Head XVI, the revised estimate for 1894-95 shows that Rs. 2,80,000 represented the expenditure in connection with the Board of Revenue: the budget estimate for 1895-96 places the expenditure at Rs. 2,93,000. Explanation is solicited as to the increase of expenditure.

The Hon'ble MR. BOURDILLON replied:—

"In the increase of Rs. 13,000 pointed out by the Hon'ble Member, Exchange Compensation Allowance is responsible for Rs. 2,000. Another sum of Rs. 7,000 has been provided by the Accountant-General under the pay of the Junior Secretary to the Board of Revenue to meet the possible contingency of this appointment being held by a member of the Indian Civil Service. The remaining differences are of small amount."

### JAIL EXPENDITURE.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

Under "Jails" the expenditure under "Salaries" in the revised estimate for 1894-95 is Rs. 2,55,273; in the budget estimate the expenditure is placed at Rs. 2,60,000. An explanation is solicited as to the increase.

The Hon'ble MR. BOURDILLON replied:—

"The figures quoted by the Hon'ble Member are those not of the revised but of the budget estimate of 1894-95. The difference between the budget figures of the two years is due to an expected increase in the payment of Exchange Compensation Allowance."

### MARINE ESTABLISHMENTS.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

The expenditure under "Marine Establishments" shows a steady increase. In 1893-94 the actuals were Rs. 82,000; in 1894-95 the revised estimate places the expenditure at Rs. 83,000. In the budget estimate for 1895-96 the expenditure is put down at Rs. 87,000. An explanation is solicited as to the increase.

The Hon'ble MR. BOURDILLON replied:—

"The difference of Rs. 4,000 between the revised estimate of 1894-95 and the budget estimate of 1895-96 is due to the expected payment of Exchange Compensation Allowance at an enhanced rate."

### MIDNAPORE CANAL.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

Under the revised estimate for 1894-95, the expenditure for the Midnapore Canal is put down at Rs. 2,57,400; the budget estimate of 1895-96 shows

an expenditure of Rs. 3,12,000. Explanation is solicited as to the cause of the increase? The receipts for 1895-96 from the Midnapore Canal are estimated at Rs. 2,77,000. Is the Canal being worked at a loss?

The Hon'ble Mr. BOURDILLON replied:—

“The cause of increased expenditure anticipated in 1894-95 and 1895-96 has already been stated in the reply to Question under heading of ‘Irrigation Works.’

“In ordinary years there is no loss but a profit, as the following figures for the last five years will show:—

Year.	Net profit.
	Rs.
1889-90	76,929
1890-91	37,942
1891-92	27,373
1892-93	93,600
1893-94	1,03,712

“The low estimate of receipts in 1895-96 is explained by the fact that it is always safer to make a low estimate, since the receipts vary a good deal according to the rainfall and the state of the crops from year to year.”

#### EXPENDITURE IN CARRYING OUT THE RECOMMENDATIONS OF THE POLICE COMMISSION.

The Hon'ble BABU SURENDRANATH BANERJEE asked:—

Will the Government be pleased to state the amount proposed to be spent in 1895-96 in carrying out the recommendations of the Police Commission? Will the Government be pleased to show the heads of the expenditure as recommended by the Police Commission, and the amount under each head, so as to indicate what part of the recommendations of the Commission has been given effect to?

The Hon'ble Mr. BOURDILLON replied:—

“The following are the recommendations of the Police Commission with the estimated annual cost of giving effect to each of them:—

	Rs.
1. To raise the pay of constables from Rs. 6 to Rs. 7 in the five Divisions of Burdwan, the Presidency, Rajshahi, Dacca and Chittagong	49,098
2. To grant recruits free kits on joining	43,566
3. To increase the clothing allowance	21,219
4. To discontinue deductions from the men's pay towards a Superannuation Fund	57,534
5. To grant special allowances to a prosecuting agency	21,120
6. To grant allowances for the charge of a police-station	1,53,240
7. To grant pony allowances to investigating officers	25,020
8. To increase the number of Sub-Inspectors by reducing that of head-constables	2,82,484
9. To increase the number of constables	50,343
10. To reorganise the non-investigating police	30,338
Total	7,33,962

“Complete effect has already been given to the first five recommendations as well as partial effect to the remainder except the seventh, which the Inspector-General of Police desires to leave in abeyance for the present. The substitution of Inspectors for Head-Constables as investigating officers is to be gradually carried out in ten years by an increased annual allotment of Rs. 28,206.

“On further consideration the Lieutenant-Governor has decided to spend on item No. 9 a further sum of Rs. 28,678, so that the total will be Rs. 79,021. Of this total, Rs. 33,594 have already been sanctioned, and the remainder will be expended in 1895-96. Under item No. 10 a reduction has been made of

Rs. 2,113, and the total stands at Rs. 28,225, of which Rs. 21,690 have already been granted, and the remainder will be expended in the coming year.

"The net result is that out of the estimated additional annual cost of Rs. 7,33,962, which the recommendations of the Commission involve, the Government of Bengal has already sanctioned the expenditure of Rs. 4,29,147 per annum, while a further sum of Rs. 80,168 will be expended in 1895-96, making a total additional expenditure of Rs. 5,09,315 per annum to the end of that year.

"Complete effect will have been given to the recommendations of the Commission when the balance of two lakhs and a quarter has been granted gradually in eight years as explained above."

The Hon'ble Mr. WOMACK said:—"I desire in the first place to congratulate the Government on the elasticity of the Revenue for 1894-95, which has resulted in a welcome addition of  $11\frac{1}{2}$  lakhs to the closing balance, and I trust that it will be found that the Revenue for the coming year will be equally elastic, and that, instead of a reduction in the balances which is anticipated, there may be an increase. I also desire to congratulate Your Honour on the success which has attended your efforts towards a reduction in the expense under the head of 'Stationery and Printing': to the unofficial mind there is always a great waste of money on Stationery and far too much Government Printing, and I have no doubt that further retrenchment is possible. I trust Your Honour and your Successors will continue to keep a watch on this matter, so that the expenditure under these heads may be reduced to a minimum.

"I would again call attention to a subject which was discussed in this Chamber a year ago, and, in view of the very satisfactory state of the finances, would enquire whether some reduction of the fees charged on the institution of Suits in the Court of Small Causes is not possible?

"Your Honour may not be aware that, by the practice of the Court, no interest is allowed except under certain conditions in the amount sued for, while the decree carries with it no interest, and no fees other than the institution fees are recoverable under the decree; this being so, it must be very evident that a plaintiff, even when successful, is bound to be a considerable loser by going into Court, and the result is that the Court is not resorted to unless the creditor is assured that the only chance of recovering any portion of his money is by proceeding to law, and is also certain that when he has a decree he can enforce it. These two points are, I am aware, beyond the cognizance of this Council, but I hope they will meet with attention in the rules which I believe the High Court is now framing for the guidance of the Small Cause Court; but if anything can be done towards reducing the fees, it will, I am sure, be of great advantage to suitors, and will add to the usefulness of the Court.

"I desire to refer to a subject which has been considerably discussed of late, and on which I have been pleased to see the remarks of Your Honour in another place. I refer to the purchase of stores in this country. The figures before us give no idea of the amount of either the local or the imported stores, nor am I sufficiently well acquainted with the figures of the Government of India to know whether the proportion of the cost of the purchasing and indenting establishment in England is added to the cost of stores imported. I am very much inclined to think not; I am quite willing to admit that at present, and for some time to come, a considerable proportion of the requirements of Government will have to be filled from Home, but I am certain that if a reasonable amount of discretion were allowed to the heads of departments, and if they were not so tied down by hard-and-fast rules, it would be greatly to the benefit of the country. I believe the Government of India has agreed to issue fresh rules on the subject to Local Governments and Heads of Departments, and I trust that those rules will be taken in the fullest and most liberal manner possible.

"In consequence of the financial position of the Province, I would ask Government, in view of the dreadful scourge of Small-pox with which the City is at present afflicted, whether it cannot assist the Municipality with a grant. I am given to understand that the extra cost to the Municipality will be something like Rs. 20,000; and as every rupee that the Corporation has is most urgently needed for absolutely necessary improvements, I am sure that if Government will give some assistance, it will be much appreciated."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"I desire to join in the expression of congratulation at the excellent Budget which has been presented to the Council. It is impossible to approach the discussion of the Budget without congratulating the Hon'ble the Financial Secretary upon the very lucid statement which he has laid before us and the Government of Bengal upon the very efficient Financial Administration which that statement discloses. The Finances of a country might in one sense be said to form the backbone of the Administration. JOHN BRIGHT said in one of his speeches:—"Tell me what the financial position of a country is, and I will tell you all about the character of its Government and the position of the people." Judged by this standard, the Financial Administration of the Province for the year 1894-95 may well challenge the approbation of public opinion. The receipts in the revised accounts of 1894-95 show an improvement of 14½ lakhs of rupees, the expenditure a decrease of half a lakh of rupees, and the closing balance a betterment of 11 lakhs of rupees, and this balance would have shown a still further improvement if the Government had not been obliged to make a contribution of three lakhs to the Imperial Government. The closing balance for 1894-95 is fixed at Rs. 33,73,000; while the closing balance for 1895-96 is estimated at Rs. 32,62,000. Such being the financial position of the Government, and such being our financial prospects, I venture to repeat one or two appeals which I made for the consideration of the Government about this time last year. At that time my criticisms were confronted with the remark that they were of a destructive character, and that I advocated impossible propositions involving increase of expenditure and diminution of revenue. It is impossible for me to say whether my criticisms on the present occasion will not be open to the same charge, but I feel that I shall not be doing my duty if I do not once again appeal to the Government, having regard to its prosperous financial position, to reconsider the question of the wages of its menial servants. They get a miserable pay and are obliged to rely upon the *bukshish* they can get or they can contrive to levy upon various parties. The price of food grains has risen enormously, and their wants have also grown with the growth of the times. In making this appeal I have high precedent to rely upon. The Government of India has just raised the pay of the sepoy from Rs. 7 to Rs. 9 a month. The pay of the sepoy had been fixed at Rs. 7 a month ever since 1796. I will read an extract from the speech of SIR JAMES WESTLAND which sets forth the grounds for this increment:—

'The remaining amount, Rs. 180,000, arises out of an announcement which I have a very great pleasure in being charged with the duty of making. The pay proper of the Native Sepoy has been seven rupees a month since 1796, but in addition to this he enjoys other allowances, some of which are common to the whole force, like compensation for dearness of provisions, and some are special concessions, which apply only to portions of the forces. These last were mostly given under conditions which are no longer applicable, and they create in some cases undesirable inequalities of treatment.

'The necessity for an increase in the general scale of Sepoy's allowances has for some time past become increasingly evident to all engaged in the administration of India; and when some months ago the present Commander-in-Chief urged that the measure could no longer be postponed, the Government unanimously accepted the conclusion.'

"I venture to affirm that the claims of the menial servants of the Government are much stronger than those of the Sepoys. They have no special concessions made to them—they enjoy no allowances. And the Government of India with a cash balance of only Rs. 46,000 has felt itself constrained in the interests of justice to grant this increase of pay to the Sepoys. I might therefore with some confidence make an appeal for an increase of pay being granted to the menial servants when we have a cash balance of nearly 33 lakhs of rupees. I would include in the same category the ministerial establishments attached to the Civil, Criminal and Revenue Courts. They draw small salaries, and they eke out their miserable allowances by resorting to practices which will not bear the test of scrutiny. These practices are a matter of open secret. The high officers of Government are well aware of them—the Government is well aware of them. The Government should openly face the situation, and put down the scandal by the only means in its power, viz., by raising the pay of the ministerial establishment.

"This is not an original idea of mine. The Government appointed a Salaries Commission, composed of some of the most distinguished officers of the

Government, and they unanimously and distinctly recommended that an increase of at least 75 per cent. should be made to the pay of the ministerial servants of the Government. The Salaries Commission said:—

‘Assuming that on the grounds now set forth sufficient cause has been shown for increasing the salaries of ministerial officers, we have next to consider what should be the ratio and amount of such increase. That it should be, as far as possible, proportionate to the increase in the cost of living that has taken place since the last revision of salaries, is obvious, but from the nature of the case it is difficult to state precisely what that increase has been.

\* \* \* \* \*

‘The best way to settle the matter will probably be to fix such a mean as will be fairly applicable all round. This will, it is true, afford more relief in some places than in others; but if we assume that there has been an all-round increase of 75 per cent. since 1867, and recommend a proportionate increase of salaries for the whole of the Lower Provinces, it will have the effect of granting sufficient relief even to the least favoured districts, and will thus remove all occasion for discontent. Our Colleague, Babu Durgagutty Banerjee, points out that the Revision Committee of 1867 did not fix the salaries at that time with any reference to the cost of living, and that to make a fair comparison we ought to go back to the early years of British rule, when the ministerial establishments were first organised, and since when there has not been any increase of salaries at all proportionate to that which has taken place in the cost of living.’

‘Then the Commission go on to observe:—

‘It now remains for us to determine the scale of salaries in the light of the foregoing remarks. Finding, as we do, that the cost of living may fairly be taken to have risen, in the aggregate, to 75 per cent. as compared with 1867, when the present scale of salaries was fixed, and that there are unmistakeable indications on all sides of a tendency upwards, we consider it desirable, not only in the interest of officers concerned, but also in the interests of the service and of the public at large, that the scale should be raised as much in reference to the present and prospective rise in the cost of living as the state of the finances may permit, though an increase to the full extent of 75 per cent. would be more than could possibly be conceded by Government. This is the more desirable, as the officers attached to the other departments, namely, the Subordinate Judicial, Executive and Educational Services, as also to the Police and Opium branches, have of late years had their position and prospects improved. Our proposals on this subject will be found in the next Chapter.’

‘The Salaries Commission recommended a graded scheme. I will not read what they said with regard to this graded scheme, but they strongly advocated an increase to the salaries of ministerial establishments, having regard to the fact that such increase had taken place in the salaries of Judicial and Executive Officers of Government. On the last occasion, when I had the honour to bring forward a proposal of this kind, Your Honour was pleased to lay down the proposition that the Government would feel it its duty to resist to the utmost any application of this kind so long as it could do so consistently with a sense of justice. I rest my case upon the highest considerations of justice. If it is fair and just that Exchange Compensation Allowance should be granted to the highly-paid officers of Government drawing comfortable salaries, so that they might be relieved of the pressure to which they are subjected by the fall in the Exchange, is it not equally fair and just that the humblest servants of Government should receive an addition to their pay so that they might be placed above want and the temptations to which want exposes them? Is it not fair and just that the public should be safeguarded against any inducement which they may have to levy blackmail upon them? The Government is no respecter of person. The highest and the humblest servants of Government are equal in its eyes. The same equal measure of justice should be dealt out to all. If the high officers of Government get exchange compensation allowance, the humbler servants of Government should be granted a small addition to their pay.

‘Coming to the head of ‘Law and Justice,’ I find that there has been an increase of expenditure to the extent of 1½ lakhs. The greater part of this expenditure is due to Exchange Compensation Allowance. In the estimates for 1894-95, provision was made for the appointment of two Munsifs and of an Additional Judge for the Eastern Districts. I do not know whether these appointments have been made, but I can find no similar provision in the budget estimates before us. Turning to the question of the increase in the number of Munsifs, I venture to differ from the opinion of the Government in this matter. I maintain that the establishment of Munsifs is not adequate to the increasing

work with which they have to cope, and I rely upon the statistics furnished by the Hon'ble the Chief Secretary in reply to a question which I had the honour to put in this Council. I find that the number of contested cases decided by Munsifs under the Small Cause Court procedure in 1890 came up to 11,000, whereas in 1893 the number rose to about 21,000; that is to say, so far as this branch of cases is concerned, the increase was nearly 50 per cent. Then, with reference to ordinary cases under the ordinary procedure, the number in 1890 was 77,000 and in 1893 82,000; here the increase was small and insignificant. Taking all the cases, contested and uncontested, I find that the number rose from 400,000 to over 500,000, or, in other words, the number of cases had risen by more than 25 per cent. in the four years from 1890 to 1893. Now, what has been the increase in the establishment of Munsifs from 1890 to 1893? The number of Munsifs had risen from 262 to 289, or, in other words, by about 10 per cent. Therefore we are driven to the conclusion that whereas the number of cases increased by nearly 25 per cent, the number of Munsifs was increased by only 10 per cent. Then you must bear in mind that there was much important work done by Munsifs which is not included in these statistics—I mean what is called 'Miscellaneous Work'. I am told by my hon'ble friend Mr. W. C. BONNERJEE that some portion of the miscellaneous work done by Munsifs is of a very important and responsible character. I am well aware of the remark made in the statistics furnished to us that there has been a slight improvement in the outturn of work done by Munsifs—an improvement in the quantity of work done; but I venture to express the opinion that an increase in the quantity of work turned out does not necessarily involve an improvement in the quality of the work done. In Judicial work improvement in quantity often means deterioration in quality. At any rate we have this fact, that the addition to the staff of Munsifs has not been in anything like the ratio in which the work has increased. I therefore most respectfully venture to solicit the attention of the Government to this important matter. I know that it means an addition to the permanent expenditure of the Government; but having regard to the financial position of the Government and the statistics to which I have referred, I hope the Government will see its way to making some addition to the number of Munsifs.

"There is another matter to which I wish to refer in this connection, namely, that Munsifs suffer very much from bad house accommodation. Your Honour gave expression to this opinion in your recent tour in the Eastern Districts, and I appeal to the Hon'ble Mr. BRIGHTON, whose intimate knowledge of the position and work of Munsifs is very great, in support of my observation. Many of the Munsifs have been known to fall victims to their unhealthy surroundings. The High Court has called attention to the want of proper accommodation for Munsifs, and I submit that it is the duty of the Government to provide proper house accommodation for their officers, especially in the outlying and unhealthy districts. It is a duty recognised by Government in regard to its executive officers, and I hope the duty will also be recognised so far as Munsifs are concerned.

"Coming to the question of 'Education,' I find that there has been an increase under all the heads of this branch, except 'Miscellaneous,' in which there has been a slight decrease. I should like to be informed what the items are which are included under this head, and in what respect the decrease has taken place. I think it would be satisfactory if the heads of expenditure are so arranged as to show how much has been expended under high education and how much under primary education.

"With reference to the Excise Revenue, I find that the fees from distilleries and the duties from the sale of liquor are steadily increasing. In 1893-94 the receipts under this head came up to Rs. 91,000; in 1894-95 they rose to Rs. 94,000; in the budget estimates for 1895-96 they have been fixed at Rs. 96,000.

"On the other hand, so far as *ganja* and opium are concerned, there has been no substantial increase. Are we then to conclude that the expansion of the Revenue was due to the expansion of the Outstill system in the outlying parts of the country? and if this was so, it would represent a deplorable departure in the policy of the Government and a violation of the mandate of Parliament.

Such a policy would be disastrous to the best interests of the peasantry of this Province, and it would involve the financial ruin of the Government, for no Government can thrive upon the wholesale demoralisation of the people.

"One word more before I conclude. We are all grateful to the Government for allowing us the right of discussing the Budget in this Council, but I think the character and tone of the discussions will greatly improve if we have more detailed information given to us. At present we have only the major heads and the expenditure under those heads. For instance, under the head of 'High Court,' the total amount of expenditure is shown. We do not know what the salaries of the Judges are, what the number of the Judges, the establishment of officers, and the like are. The details are not given. If our criticisms are to be of any value, we ought to be able to enter into these details and not confine our remarks to the main outlines under each head. I understand that in the office of the Accountant-General a detailed budget is prepared. Would there be any objection to lay that Budget before this Council? The members of the Bombay Legislative Council are furnished with such a detailed budget, and they are able to criticise the details of Financial Administration far more effectively than it is possible for us to do here with the scanty information before us. Perhaps if such a procedure were followed it may lead to the postponement of the debate on the Budget to the middle of June or July, but as our function is not to sanction or to modify, but only to criticise and discuss, I do not think such a course would lead to any public inconvenience."

The Hon'ble Mr. LYALL said:—"As an old Inspector-General of Police I desire to say a few words on a very important point in the Budget now before us, namely, the increased expenditure under the head of 'Police.' While I held the position of Inspector-General I found the efficiency of the Police and their good working very seriously affected by the very large reductions which took place during the time when Sir ASHLEY EDEN was Lieutenant-Governor. I have always looked upon those reductions as the one blot on that Administration. Here, in Bengal, in the absence of any other local agency, we perhaps depend more than in any other Province on the efficiency of our Police, and anything which will raise that efficiency and make the Police less corrupt will be conducive both to the good of the country and to the advantage of the Administration. I rejoice therefore to see that Your Honour has been able to sanction so large an additional expenditure on account of the Police. There are, however, one or two points of Police Administration in regard to which I think further improvement is possible. In the old days the post of Court Inspector was very much run after. Men get old, and many get fat, and when a man who had past his prime was found unfit for the active duties of an Inspector, he was given the comparatively easy post of Court Inspector. That post is now held by Sub-Inspectors, most of whom would be equally efficient in the post of Inspector. The change which I advocate can be made without any increased expenditure. Another point to which I wish to refer is the very great run there was at one time for police appointments when Sir RIVERS THOMPSON promised to promote one or two members of the Police Force to the Subordinate Executive Service. When it was found that to enter the Police opened a door to the Subordinate Executive Service, a class of men entered the force who had never entered it before, as they saw before them prospects of possible promotion. We all know what effect the office of Archbishop of Canterbury has in ordinary men to enter the Church, and what effect the possibility of obtaining a seat on the Woolsack has on the Bar, and the promotions from the Police to the Executive Service certainly produced a similar effect. I think it would be well if Your Honour would again open that means of promotion to deserving officers of Police.

"I wish to add one remark with reference to what fell from the Hon'ble Mr. WOMACK as to the reductions under the heads of 'Stationery and Printing.' The Department of Stationery is under my immediate control, and I wish to say that it is owing to the judicious expenditure of a comparatively small sum in giving increased accommodation to the Stationery Office that the large reductions which have been made have been found possible, and it is due to Your Honour to state that it is entirely to you that this reduction has been made possible.

So long as the Stationery Office was so dreadfully cramped for space, nothing like proper economy was possible."

The Hon'ble Mr. BRIGHTON said:—"As a special appeal has been made to me as possessing perhaps a more intimate knowledge of the work performed by Munsifs, the way in which they are housed, and the inconveniences from which they suffer, especially in remote and malarious subdivisions, than other hon'ble members, I feel bound to say that it is impossible not to sympathise to a great extent with what the Hon'ble BABU SURENDRANATH BANERJEE has said. I believe His Honour is himself aware from personal observation of the extremely rough accommodation with which Munsifs in many unhealthy localities have to content themselves. In some places there is no dwelling available at all, even of the rudest description. An instance of this kind occurred not long ago. The Munsif of Baraset was compelled to apply to the High Court for permission to live in Calcutta owing to his absolute inability to find a residence of any kind at this subdivision. The question of supplying houses for Munsifs is one for the consideration of Government, and its complete solution in any satisfactory way must necessarily involve a large outlay. Nevertheless I should be very glad if the Council were to hear to-day from His Honour that Government were prepared by way of a commencement to meet this grievance, to build houses in some selected subdivisions where the greatest difficulty is felt, and allow Munsifs to occupy them on reasonable terms.

"The hon'ble member has also made some observations on the amount of work which devolves on Munsifs, and from statistics which he read he came to the conclusion that while the number of the Munsifs in the last few years has increased by 10 per cent., the number of cases disposed of by them has increased by 20 per cent. The Subordinate Judicial Service is no doubt hardworked, but I think a little too much is sometimes made of the amount of labour they have to undergo. As a rule they sit for a considerable number of hours in Court, but it would be a mistake to suppose that the whole of this represents a very large amount of mental strain. The great bulk of their work is not of a complicated or difficult nature. Their judicial work may be roughly divided into three classes: cases under the rent-law, suits under the Small Cause Court Procedure, and suits involving the adjudication of questions of title. The work under the latter head is undoubtedly difficult, and for its proper performance demands intellectual qualities of a high order. The other two classes of suits, however, cannot be said to make much demand upon the mental powers. The distribution of work is generally arranged so that a Munsif may have upon his file a fair proportion of cases of all classes, so that the aggregate of work involving a severe mental strain is not as a rule great. Then, a great deal of the judicial work of Munsifs is uncontested. This practically involves no intellectual exertion. The same may be said of the miscellaneous business to which reference has been made, consisting of the examination of accounts and the supervision of the Nizarat and Copying Departments. The number of hours, therefore, which a Munsif has to sit is not a true criterion of the expenditure of brain power involved.

"I wish to add a few remarks with reference to what fell from the Hon'ble Mr. WOMACK on the report of the Calcutta Small Cause Court.

"The hon'ble member seems to me to labour under certain misapprehensions. He complained in the first place that no fees were allowed to a successful plaintiff for the legal practitioner engaged to conduct the case. This is, however, distinctly provided for in section 76 of the Presidency Small Cause Courts Act, except in suits below Rs. 20 in value, and even in such suits the Court may allow a fee, if the Court considers the employment of a practitioner 'as under the circumstances reasonable.'

"Then, again, he complained that no interest was allowed on current accounts before the decree was passed, and also that after decree until the date of realization the Court refuses interest. As to the first point the question involved is one of law and is entirely beyond the control of Government in the Financial Department. The usual practice is that on a running account for goods sold, a merchant or tradesman is not entitled to interest unless there was an actual agreement to pay interest on the part of the purchaser. The Calcutta

Small Cause Court, like all other Courts, is bound in this respect, as in others, to follow the law. As regards interest after decree, a provision of the Civil Procedure Code (section 209) has been incorporated in the Presidency Small Cause Courts' Act, and this provision allows of the Court awarding interest at such rate as the Court considers reasonable. With reference to another observation of the hon'ble member that the fees payable on the institution of suits in the Small Cause Court are too high, there can be no doubt that they are somewhat higher than institution fees on suit filed in the ordinary tribunals. With regard to this, it will be within the knowledge of many hon'ble members of the Council that I made a detailed enquiry into the organization of the establishment of the Calcutta Small Cause Court some two years ago, and that I recommended considerable reductions of expenditure, some of which have been already, and others will in time be, carried out. There can be no doubt that these reductions have considerably increased the profits of the Court, and if a representation is made on the subject to Government, this increase in profit should in fairness to the public be borne in mind when the question of reconsidering the amount of institution fees leviable is again taken up. I am not aware whether any such representation has been yet made or whether the subject has been discussed in the Financial Department."

The Hon'ble Mr. COTTON said:—"I only wish to trouble the Council with a very few observations in regard to the Budget under consideration. It is impossible, I think, not to sympathise to a large extent with the remarks and criticisms made by the Hon'ble BARI SURENDRANATH BANERJEE, and in one particular I must say I personally sympathise largely with what he said on the subject of the improvement of the salaries of the lowly-paid servants of the Government. I have no doubt whatever that the time is not far distant when some increase of pay will have to be granted, certainly to some of the menial employés of the Administration, and possibly to some of the more under-paid clerks. The practical difficulty on these occasions arises from financial considerations. The Government have in the past year granted a large increase to the lowly-paid officers in the Police. The statement laid before you to-day shows that the total sanctioned increase of expenditure in the Police Department amounts to considerably over seven lakhs of rupees per annum. Such an increase as this involves a heavy strain on the resources of the Administration. Although it is not easy to make an estimate of what it would cost to make a corresponding increase of pay to the Ministerial Establishments in these Provinces, there can be no reasonable doubt that if an increase corresponding to that given to the Police were given generally, it would cost three or four times as much. Funds are not available to the Government for this sort of generosity. I have no doubt that in some measure the demands of the hon'ble member will be complied with; but that they will be complied with as liberally as the corresponding demand in the case of the Police Constabulary has been met I am afraid is not possible. Then, again, with regard to the Civil Courts, it is impossible not to feel that there is great force in what hon'ble members have told us, namely, that the Munsifs are very indifferently housed. On the other hand, it can hardly be expected that the Government should provide houses gratis for the large number of Munsifs who are scattered all over the Province; and if suitable accommodation is provided, it will be necessary to charge them a suitable rent for the buildings which the Government may construct. But I am not altogether sure how far the Munsifs themselves will be pleased with such an arrangement. One of the advantages of a Munsif's appointment in the Mufassal is, that he spends very little. It is one of the points in which the Provincial Judicial Service is preferable to the Provincial Executive Service, that Munsifs are able to live more cheaply than their contemporaries in the executive line. If houses are constructed for them, they will have to raise their standard of living, and they will have to pay suitable rents. Again, the amount of work done by a Munsif has undoubtedly increased in the ratio indicated by the Hon'ble Member, but it is right that I should point out that this large increase of work is almost entirely in the Small Cause Court Department. As the Hon'ble Member justly stated, the increase in the number of ordinary

contested suits is very slight indeed, namely, from 77,000 suits to 82,000 in the course of five years, and that is an increase which has been more than met by the considerable number (29) of additional Munsifs appointed during the same period. The increase in Small Cause Court work is due to the fact that a few years ago Small Cause Court cases were not triable by Munsifs. They have now, on the recommendation of the High Court, been largely vested with power to try cases under the Small Cause Court procedure, and are so enabled to deal with petty cases with greater despatch and promptitude. It is to the interest of the public that this should be so. But uncontested cases give little or no trouble to the presiding Judge, and even in regard to petty contested cases—I can speak from personal experience as a Small Cause Court Judge—that they give very little trouble. Therefore the department in which the increase of the work of the Munsif is largest does not press very much upon the time of the Munsif. I wish to add that while the Government is fully alive to the necessity for increasing the staff of Munsifs, Munsifs are not the only officers of Government who are hardworked. The executive officers of the Government are also very hardworked. I should be justified in saying that the class of Deputy Magistrates as a whole is as hardworked, if not harder worked, than Munsifs. Certainly I find from my experience that they suffer more largely from ill-health brought about by work and exposure than civil judicial officers. Although it is very easy to urge upon the Government the necessity for increasing these Courts by adding to the number of Munsifs, yet when one takes the question up practically, it is found that financial considerations preclude any very active progress in that direction. The progress which has been made in this direction since I have had the honour to be Chief Secretary is greater than that which has been made in most of the other departments of the Government. Look at other departments: look at the Jails, for instance. How easy it would be to spend a few lakhs in improving the prisons in this province; to rebuild prisons, the construction of which has been condemned, and to construct new jails on the most improved methods where they are required. Look how much money could be spent on the Registration Department, which is expanding by leaps and bounds; look at the public buildings of all sorts and descriptions, Administrative, Medical, Educational; look at the Munsifs' Courts. If we are to house Munsifs properly, it is also necessary that they should have suitable Courts. There are numberless directions in which the Government could spend its money, and this I may state on behalf of the Government that it does spend all the money it can in the directions in which it is most required. If money were available, none of the objects to which the Hon'ble BABU SURENDRANATH BANERJEE has referred would be left unprovided. If money were available, all his prayers would be granted. Much has been done hitherto in these directions, and I am sure that, with the improving condition of the Provincial Finances, more will be done in the future."

The Hon'ble MR. BEIGHTON explained:—"With the permission of the Hon'ble THE PRESIDENT, I wish to make one remark with regard to what has fallen from the Hon'ble the Chief Secretary. In alluding to my observations as to the insufficiency of house accommodation for Munsifs and in expressing his concurrence with these observations, he expressed a doubt whether they would be willing to pay rent for houses if Government provided them. I think that, knowing as I do the views of Munsifs better probably than any other official member of the Council, I can assure my hon'ble friend that they would be only too glad to pay any reasonable rent which the Government might think it right to impose."

The Hon'ble MR. BOURDILLON said:—"Before I proceed to answer in detail the criticisms of the budget statement to which we have just listened, I desire to express on my own behalf and on behalf of the Government my appreciation of the kindly tone of those criticisms; they breathe a spirit of appreciation of the work done by the Government and of sympathy with its difficulties, which makes the task of replying to those observations as pleasant as it is easy. The Hon'ble MR. WOMACK commenced by congratulating the Government on the reductions which have been effected in the course of the past

year and the year before in the departments of Stationery and Printing: his remarks upon this point were extremely acceptable to myself, as I know how much attention has been given by His Honour the President to the matter, and what pleasure it has given me to aid his efforts in that direction; and it is gratifying to find that a practical member like the Hon'ble Mr. WOMACK has appreciated our exertions, and that speaking on behalf of the large and influential body he represents, he has been able to congratulate the Government on its economies under the head of 'Stationery and Printing'. As regards the fees in the Small Cause Court, the Hon'ble the Legal Remembrancer has relieved me of the necessity of giving any answer. The hon'ble member can hardly expect me to give him an assurance that the Government will take steps to bring about a reduction of those fees. All that I can possibly say is that the matter will be carefully looked into, and that what can be done will be done. With regard to the purchase of stores, that is virtually a measure which is in the hands of the Government of India; for the Viceroy in Council and the Secretary of State have long since laid down very strict rules as to purchasing in this country articles of European manufacture. The matter has for some time had the personal attention of the Lieutenant-Governor, and as an instance of His Honour's practical support of local products, I may mention that during the last two years large savings have been effected by an order that all the paper used by officials under the Bengal Government should be paper made in this country. The hon'ble member concluded his remarks by an appeal to the Government to help the Calcutta Municipality in its efforts to abate the Small-pox epidemic now raging, and to provide relief for the sufferers from that dreadful scourge. I may tell the hon'ble member that a similar appeal has been made within the last few days by the Calcutta Municipality, and it has been my duty to reply to them that in the opinion of the Government it is a matter with which they should deal themselves, and that the epidemic being of a local character and the Calcutta Municipality having large funds at its disposal, the Government is not prepared to come forward with pecuniary assistance. It is not perhaps known to the hon'ble member how very large a proportion—two-thirds at least—of the cost of the medical institutions in the City is contributed by Government, and in the case of the Campbell Hospital, to which the Municipality does contribute a considerable sum, the proportion of the expenditure which is defrayed from Provincial Revenues is 60 per cent.

"The Hon'ble BABU SURENDRANATH BANERJEE suggested the propriety of—raising the salaries of members of the ministerial establishments, and his representations have been replied to both by the Chief Secretary and the Legal Remembrancer. It is admitted that if funds were available, there is hardly any direction in which money could be better spent than in raising the salaries of these low-paid servants of the Government. But this is a very large question, and, unlike other cases in which expenditure is needed, this is a matter in regard to which if a step in advance is once taken, there is no retreat. If the wages of the ministerial establishments are generally increased, the charge becomes a permanent one, and we cannot go back. It is obvious therefore that the matter must be taken up with great care and circumspection. Already in districts where the price of grain is very high, the Government is able under the rules in the Civil Account Code to raise temporarily the pay of such of its servants as draw less than a certain minimum salary, and I may mention that in 1893-94 considerable sums were granted for this purpose in districts where prices ruled exceptionally high.

"With regard to 'Law and Justice,' it is unnecessary for me to add anything to what has already been said by the Chief Secretary, since he dwelt at length on the question of the number of Munsifs and the increase of their work, but I may state that the question of the housing of Munsifs is a matter to which the Lieutenant-Governor in his frequent tours through the Province has constantly paid attention, and it is one to which careful consideration will be devoted within the next few months in connection with the balance at the disposal of Government.

"The hon'ble member next asked for the details of expenditure under 'Education.' I hold in my hands a statement which shows at one view the whole expenditure upon Education in Bengal, whether from Provincial Revenues,

District Funds, Municipal Funds, the Mohsim Fund, or other sources. It is divided into several main heads, showing the expenditure not only in the Education Budget proper, but also that on special and medical instruction, and the public works expenditure upon school buildings; so that the hon'ble member will be able to see the amount spent under any head in any year as well as the source from which the funds have been derived. The Lieutenant-Governor caused this statement to be prepared with the express object of laying it before the Council on this occasion, but as this is the first year of its preparation, all the Commissioners of Divisions have not been able to supply the details of municipal expenditure, and so far as that information goes, the statement is incomplete. I shall be very glad to supply the hon'ble member with a copy of this statement as it now is, and also to send him a copy of the statement when it has been completed showing the expenditure upon Education from Municipal Funds.

"The expenditure on 'Excise' also came under criticism, and the hon'ble member argued that the increase in the receipts must be due to the development of the Outstill system. In answering the hon'ble member's second question this morning, I pointed out that during the last three years the Outstill system has not been introduced in any district except only in part of Cuttack, where, in 1893, six Outstills were sanctioned in a jungly part of the district, remote from the sadar distillery. Speaking from memory, I venture to say that the number of sanctioned Outstills has not increased. The hon'ble member should bear in mind the distinction between the number of shops sanctioned and the number of shops actually let: the numbers sometimes differ, because shops which have been sanctioned are not let. The number of shops for each district is settled every year, and in the number thus settled little variation takes place from year to year.

"The shops are then let out, and if any one year shows a larger number of shops let than that which preceded it, this result is not due to any effort on the part of the Government to develop the drinking habit among the people: it is rather the barometer of the prosperity or otherwise of the times. When the year is prosperous, the sanctioned shops are all taken, but when times are hard, the sanctioned shops are not all let.

"Lastly, with regard to what fell from the hon'ble member as to the desirability of laying a detailed Budget on the table, I have to inform him that such a Budget is already prepared. What is technically known as the Yellow Book contains in detail all the information the hon'ble member desires to have, but it refers to actuals, not to estimates. I would also point out that the perusal of such a detailed statement will be extremely irksome to most persons, though perhaps one or two hon'ble members might take the trouble to look into the details. However, subject to any remarks which may be made by His Honour the President, I will only say that, if desired, the latest existing detailed statement of the kind described can be laid upon the table, when the annual Provincial Budget is submitted to this Council.

"I desire to add a word more, namely, that in acknowledging on behalf of Government the unanimous approval of the financial arrangements of the Province which has been accorded by this Council, it is only fair to say that the Government has had nothing to do with the increase in the revenues, which is chiefly due to the general prosperity of the country and the operations of the Eastern Bengal Railway. All we can lay claim to is some credit for the very close way in which our expenditure has been kept within the budget sanctions of the year before. This is due to the loyal manner in which the careful instructions issued by the Government of India have been carried out by all the officers to whom they were communicated in 1894-95, and again at the time when the present Budget was being framed. If hon'ble members will look at the budget estimates of the year 1894-95 and at the revised estimates of the same year, they will find that the sanctioned grants have not been exceeded under any considerable head. There is only one head in which there has been any considerable increase, and that increase is the best possible proof of the intention of the Government to foster Local Self-Government; for the sum of Rs. 2,30,000 has been taken from Provincial Funds and made over to Local Funds. Of this sum, Rs. 1,54,000 represent the cost of public works of

various kinds, which have been entrusted for execution to District Officers and Local Boards, and the large sum of Rs. 60,000 has been taken from under the control of the Director of Public Instruction and made over to District Boards to meet the wants of primary education.

"It is only left for me to congratulate Your Honour that in the last year of your Administration it will be your good fortune to have the control of so large a sum as 11½ lakhs for the execution of many schemes long since approved but delayed hitherto merely for want of funds, and generally for promoting the material progress of this great Province."

The Hon'ble THE PRESIDENT said:—"I wish to associate myself with the remarks which have just been made by the Hon'ble the Financial Secretary with regard to the satisfaction which I myself and every member of the Government must feel at the manner in which our Financial Statement has been treated by this Council. It has been received in a flattering and appreciative way, and the remarks, whether appreciative or critical, clearly showed that the financial control which has been exercised over the Province has been understood and looked into, and that the deliberate feelings of my hon'ble colleagues in this Council support the Government in the measures which it has taken.

"Before going into further details I ask your leave, gentlemen, to make a few remarks upon the subject of interpellations in general, to which I have been partially led by the questions which have been put to-day. You, no doubt, are aware that the project of allowing a greater freedom in the putting of interpellations always accompanied the idea of the enlargement of the Legislative Councils, and while it is not fitting for me to betray the secrets and discussions which took place in the Executive Council, I think I may say that every member of that Council, at different times, expressed the view that interpellations of the kind that we looked forward to would be in the highest degree beneficial to the establishing of good relations between the Government and the people of the country. What our view was cannot, I ventured to think, be better expressed than as put in a Minute of SIR GEORGE CHESNEY to the effect that the Government has nothing to conceal, that it has every desire to explain the reasons for its actions, and it has everything to gain by making those reasons known as fully as possible. I think you will agree with me that the results have not altogether met the anticipations which we formed. Somehow or other—it is difficult to say how—a sort of idea has grown up in the public mind that an interpellation must necessarily be hostile, and that an hon'ble member who puts an interpellation may be presumed to have a desire to heckle the Government or to expose its shortcomings in some way or another. I think it is most unfortunate that such a feeling should have grown up. It has been due to criticisms which have been passed on the style of questions put, not so much in this Council as in the Councils of other provinces, and I think in many cases these criticisms, whether applied to other provinces or applied to this province, have not been altogether reasonable or sympathetic. I certainly feel that I have nothing very much to complain of as regards the spirit with which interpellations have been put here, but I think that we might put interpellations upon a better footing if it were thoroughly understood that the Government desire to deal with all the members of this Council as its trusted Councillors whom it wishes to associate with itself in its policy, and to whom it wishes to impart the information which it possesses. On many occasions interpellations take this form:—'Does the Government know of a certain action which has been pursued by a certain officer in the mufassal?' Either the Government says, 'we do not know, but we shall enquire,' or else the Government says, 'yes, we know; the officer in question was acting within his legal and prescribed powers, and it is not desirable for the Government to be always putting its finger into the works of its machinery and making the wheels go round in a different way or in a different direction than the one in which it is intended to go round.' This feeling that the Government should interfere directly in such matters is perhaps attributed to the Oriental notion which has come down to us from antiquity that the Government is all-powerful, and that it is able to redress an injury whenever

it sees it. Unfortunately, the Government is not all-powerful, and the limits of human efforts are extremely restricted. There are but 24 hours in a day, and it is impossible to spend all those 24 hours in looking after what is done by officers in the mufassal in regard to matters in which the law or the Government gives them power to act independently. Then, there is another class of questions, of which we have had an instance to-day. My hon'ble friend, BABU SURENDRANATH BANERJEE, who put them, desired to get information on many subjects, and seems to think that the only way of getting that information is to put these questions. What I want to suggest for the future carrying out of the work of the Council is, that it would be very convenient if hon'ble members would consult the Secretaries to the Government privately on subjects of this kind before they put their questions in the Council. There are a great many points in the list of to-day's questions which could have been explained to the hon'ble member more quickly and even more clearly if they had been put in the Secretary's own room, and if he was shown the papers on which the answers had been based. I am afraid that my friends, the Secretaries, might think that a new vista of horrors is opening out to them, if, in addition to their ordinary work, of which no one knows better than I do how laborious it is, they may have to spend hours in explaining these things to the non-official members of the Council. Of course, if my suggestion is followed, you, gentlemen, will not require of them any undue expenditure of time of the kind to which I have alluded. I think it will be quite possible to fix a certain day and a certain hour at which the Secretary would be available, and having received notice beforehand would have the papers ready and explain matters to any member who may desire any information or explanation. I make this suggestion not with the idea of burking any enquiry or putting any restriction upon the power of putting interpellations. Ordinarily speaking, where information is desired, it can be more quickly obtained in this way. If the information that is obtained leads hon'ble members to think that the action or the policy of the Government requires correction or criticism, then would be his opportunity to put his question in Council on a better basis and in a more complete way than he can now. I believe that if this suggestion is taken advantage of, it will, to some extent, lead to a diminution of interpellations, and to a great extent will make the questions more definite, more pointed, more precise, and more useful in drawing out the particular points which are required to elucidate facts or policy which may require discussion.

"Turning to the particular points put before us, there is but little left for me to say after the able manner in which the Hon'ble the Financial Secretary has replied to the different criticisms which have been brought forward, and I wish to say with him how much I appreciate the manner in which these suggestions have been made. I felt it my duty on a former occasion to use words which have been quoted to-day, and which imply a certain amount of complaint that the object of our debaters seemed to be to cut down revenue in every direction and to increase expenditure. Nothing that I said on that occasion applies to what has been said to-day. All the suggestions made to-day are useful and practical ones—the suggestions of men who know what they are talking about, and whose views are such as to deserve the serious attention of Government and the sympathetic desire of the Government to meet their suggestions as far as possible.

"With regard to the Hon'ble MR. WOMACK's remarks about the Small Cause Courts, I think those remarks have been fully and completely answered. As the Hon'ble MR. BOURDILLON has said, we will have a careful enquiry made into the question of fees, and ascertain whether it is in the competence of Government to alter them, and whether if it is desirable to do so, it can be done without incurring any financial loss or giving to suitors advantages which would be relatively too large compared with the costs which have to be incurred in other Courts.

"With regard to the question of Stores, the Hon'ble MR. BOURDILLON has already said what we have done in the matter of Stationery. The chief class of stores is, of course, that purchased by the Public Works Department; and, as I mentioned in the Supreme Council on Thursday last, that subject has lately been engaging my attention, and I have been looking with some disappointment to see how little had been done to carry out the policy of procuring them

in the country. As I said then, until manufactories are set up in which steel shall be cast or iron wrought in this country, it will be impossible to avoid procuring from England the articles which our Public Works Departments most require, such as steel rails, steel sleepers, rolled joists, angle iron, and articles of that kind. No experienced commercial gentleman would advise us to procure them in this country through middlemen, because obviously the profit of the middlemen would be thrown upon the price put on the article, and no one, with any knowledge of the subject, will deny that it must be cheaper to buy in England and import direct from the India Office than to buy here from merchants in this country, who have to purchase from the manufacturers in England and impose their own profit before they part with the articles to purchasers. But I propose to take steps to have a return prepared annually and laid before the Council on the next recurring occasion to show what the nature of the stores is which are purchased in England and those purchased in India, and from that return it will be possible to draw a conclusion whether anything is done, which at all contravenes the rules of Government or that Resolution which the Hon'ble Mr. WOMACK has drawn attention to. It may also possibly have the beneficial effect of pointing out to the people in the trade what the nature and quantity of articles of this kind is, and of encouraging them to get out the necessary machinery for casting steel rails or rolling iron joists in this country. There is nothing which is more to be desired than the establishment of industries of that kind. It was a great disappointment to me that the Barrakur Iron Works, which was handed over to a private Company partly at my suggestion when I was Public Works Member of Council, in the hope that that Company would carry on the works more efficiently than the Government had done—it was a great disappointment to me that the anticipated progress has not been made, but I am still not without hope that we may see iron wrought and steel cast in these Iron Works, and if not there, elsewhere.

“Coming next to the Hon'ble RABU SURENDRANATH BANERJEE's remarks about the wages of menials, the Hon'ble the Chief Secretary has represented my views upon this subject. I think that the quotation which my hon'ble friend made from my remarks on a former occasion could hardly have been correctly made. I do not challenge it, but it did not seem to me to be anything which I remember to have said, or to express the attitude of mind which I took up with regard to that particular question. I may certainly say that the raising of the wages of the menial servants of Government would be, in my opinion, a very desirable thing if financial considerations allowed it, and if the Hon'ble member could tell me what it would come up to, or if I was able to form off-hand an estimate, however rough, of the cost of doing it, I would at the present moment give the hon'ble member an answer more or less indicating my view as to the possibility of carrying out this matter during the present year. I may point out with regard to the raising of the pay of the Sepoys, which has just been effected, that this is an instance which shows how slowly a reform of that kind is carried out, and how long the applicants have to knock at the unwilling doors of the Treasury. As he himself remarked, the wages of the Sepoys had not been raised since 1796. Indeed, I may say that during the last fifteen years I have been rather intimately acquainted with the financial business of the Government, and I know that this proposal has been continually before the Government of India during that time, and as you see it has only just been carried out. The question of the wages of the menial servants of the Government stands in the same position; it has to knock at the door and continually go on knocking, and I have no doubt that the door will be opened at some time. I should be very glad if it could be opened during my time. One word as to the analogy between this increase of the wages of the menial servants and the Exchange Compensation Allowance to which reference was made by the hon'ble member. I would point out that we do for our menial servants what exactly corresponds with the Exchange Compensation Allowance given to European officers. These menial servants do not send their wives and children to England, and have not to remit money there. What corresponds in their case to the increased expenditure thrown on European officers by reason of the fall in exchange is the rise in the price of food. The compensation for the dearness of food which is constantly given to menial servants by definite rules when the market prices reach certain limits exactly

corresponds with the Compensation Allowance when the exchange falls below certain rates. I only mention this as an academical argument, as showing that we have something to say on our side, and not as implying that I wish to contest the propriety of the suggestion which the hon'ble member has made, or as drawing back from what I have said as to my own desire to carry out this suggestion.

"Next, with reference to Munsifs and the supplying of suitable accommodation for them, with regard to which an appeal has been made, which in no degree exceeds my own views as to the hardships which Munsifs in many parts of the country have to suffer. I wish to mention that we are at present engaged in correspondence with the High Court on the subject. I have pointed out that there are three alternatives: first, the one mentioned by the Hon'ble the Legal Remembrancer of constructing houses with public funds, and I fear with the Hon'ble the Chief Secretary that any Government provision made in this way would be considered by Munsifs themselves to be too costly. As all of you know, our Public Works Department builds with solidity and not with cheapness, and if we have to charge so large a sum as will cover the cost of building a residential house which will be suitable and comfortable, the rent which will be fixed will be very much higher than Munsifs are in the habit of paying and much more than they would like to pay. This is one alternative, and even if this alternative is adopted, the work cannot be carried out at once, but will have to be done somewhat gradually, because out of the 289 Munsifs shown in the statement given last week, we may assume that about 200 of those are at outlying stations, and the cost of building houses for them, taking it at Rs. 5,000 per house, would come to about ten lakhs of rupees, so that that cannot be done at once. The other alternatives suggested were that Munsifs should take advantage of the provision which already exists under which any officer can apply for an advance to build his own house, it being understood that the High Court should, in their administrative capacity, see that a due value should be put upon it, and that the incoming Munsif should be compelled to take it at a fair rent; or that we should use our efforts and get capitalists or zamindars and other wealthy people in the mufassal to build houses for Munsifs, and having fixed a fair rent, we should in the same way issue orders that the Munsif should occupy that house and pay the rent fixed. These are the only three ways in which I consider it possible to meet the difficulty, and we are awaiting the advice of the High Court as to which of these courses we should pursue.

"Then, as regards 'Excise'. I would only mention one point in addition to what the Hon'ble the Financial Secretary has said as to the cause of the large increase of revenue from spirits. There are two ways to account for this increase in the revenue—first, by purchasers paying larger fees, and, secondly, that more liquor was consumed. If hon'ble members will read the Resolution on the last Excise Report, they will see that the Government took care to point out, and were able to show, that in almost every case where there had been an increase in revenue it had been accompanied by a relative decrease in quantity, so that the increase in revenue had not been obtained by an increase in the quantity of liquors and intoxicating drugs, but by the duty producing a larger revenue and making it dearer to consumers. I may mention some of the steps we took to raise the price.

"The still-head duty on rum, which is largely consumed in the country, was raised by one rupee, and the increase of revenue from this source was about one and-a-half lakhs, and again the several classes of license fees for the wholesale and retail sale of liquors in Calcutta were considerably raised, and from this also increased revenue of about half-a-lakh was gained. I am as confident as it is possible for any one to say who speaks without premeditation on a subject which has largely occupied his mind, but without the figures before me, that the increase in the revenue to which the hon'ble member alluded has not been due to an increase in the sales of liquors, but to an enhancement of its price.

"I will only add this, that I am entirely opposed to a large increase of Outstills, and I strongly hold to the propriety of the principle of the manufacture of spirits at sadar distilleries and the imposition of still-head duties upon it,

and that, although there may be arguments for establishing Outstills in outlying districts and scattered places, I am not inclined to extend the number of Outstills to the prejudice of system of distilleries at head-quarters.

"With reference to the request that had been made by the Hon'ble BABU SURENDRANATH BANERJEE for more detailed information than that given in the budget statement, I shall be glad if he will see the Hon'ble the Financial Secretary and look over what information exists in the office, and if there is anything which is likely to be really useful or meet the wishes of members in general, it will be put before him. But I entirely deprecate anything which would lead to an increase in the labour of writing or in the cost of printing, because, as a matter of fact, information of a most extraordinarily minute and complete character exists in the book issued by the Financial Department, called the Yellow Book, to which I refer the hon'ble member as a standard source of information of the actual expenditure of the country at large, showing that of the whole of India and of each province under very minute heads. When I was President of the Finance Committee I relied almost entirely upon that book for the information we required, and I found that almost everything necessary to examine the state of the finances was to be found there. But that represented past and completed expenditure. Similar information is not supplied as to the details of estimated figures, but I think the Council will agree with me that the Government are wise in declining to take so much labour and expenditure with their estimates, and should incur it only when the books for the year are closed and the expenditure known with absolute certainty.

"The remarks which were made by my hon'ble friend, MR. LYALL, upon the police management were useful remarks made by an officer of great experience, and anything that he said on this subject must receive careful attention. They shall be laid before the Inspector-General of Police, and considered in the Judicial Department, and anything that the Government can do, especially with regard to the suggestion which he made regarding the employment as Court Inspectors of men who are still intelligent and capable, but who are physically inactive, shall certainly be considered with all the attention the subject deserved. With reference to the suggestion of the same hon'ble member that police officers should be appointed to the Subordinate Executive Service, I may say that we have here an example of our old friend 'the better is the enemy of the good.' The Government has adopted a better policy, namely, the restricting the appointments to the Subordinate Service by competitive examinations, and in this way we have obtained, by rules the credit of which is chiefly due to the Hon'ble the Chief Secretary, an excellent body of recruits—quite the flower of the educated young men in the province, all of whom have graduated, many of whom are M.A.'s and B.L.'s of good families, and sons of men who have either served the Government honourably and well, or hold good positions in the country. These rules were rigidly adhered to and rightly so, and I am quite sure that the policy has been a wise and successful one, and you will see how difficult it would be to deviate from this policy, and make what are called special cases: it will be like the letting in of water. Once make a special case of Police Inspectors who cannot pass the examination, and we shall receive applications from all quarters, and I therefore quite support the rigidity with which the Hon'ble the Chief Secretary has refused applications of this kind. But the Hon'ble MR. LYALL has omitted to notice that we have done more than SIR RIVERS THOMPSON did by promoting Inspectors to the covenanted grades of the Police, two of them being raised to Assistant Superintendents of Police in every three years. The position thus gained in their own service carries with it higher pay than by promotion to the executive service, and I think it will tend more to the good of the Police and to the Executive Service than if we were to revert to the old rule which was good at the time, but which is inferior to the policy now adopted.

"There is only one point on which I can add anything to what has been said with regard to Stationery and Printing. Every reform of this kind is accompanied with a certain amount of loss of efficiency. One of the chief causes of the reduction of expenditure has been a strict adherence to the rule that if an improvement is made in the form of a return, it should not take

effect at once as a zealous officer would, no doubt, desire it should take effect, but the carrying out of the improvement should wait until the printed copies of the old form were exhausted. On the one hand, it will be seen that a saving is effected by first using copies of the old form in stock, while others may contend that the loss in efficiency by the postponement of the improvement is greater relatively than the gain effected by utilising the forms already in stock. Taking the strong economical view I have always taken, I am inclined to think that the carrying out of the reform should, in such a case, be postponed. Many reforms which are in themselves good are better for being postponed, and gradually introduced, and I think we are right in doing so, even though it has caused a slight postponement of the improvement in administrative procedure, which is desired.

"I will only trespass upon your attention further by remarking on one other subject, and I must apologise for doing so. My chief reason is that I spoke on this subject two days ago, when the Reporters were so tired in the course of a long debate that what I said failed to reach the public ear, at any rate in the manner in which I wished it to reach the Public. At last Thursday's meeting of the Viceregal Council I referred to the speech made by the Right Hon'ble Mr. Fowler, and the optimistic view which he took of the state of the Imperial Finances. He went on to show that while the whole of our public debt was over 200 millions, almost the whole of that debt was covered by our assets in the form of railways, canals, and public works of that kind. No sooner had he said that than an answer was put in by a well-known English writer who holds a very influential position in England as the Editor of the *Investor's Review*, who replied:—'What nonsense are you talking? Do we not find that in every bankruptcy the assets are greater than the liabilities, but the man is a bankrupt because his assets cannot be realized?' I confess I saw with great regret how greedily that was taken up by a certain class of Journalists in the country as an effective answer to what the Secretary of State had said, and, as an illustration of the futility of the reply, I drew attention to the railway with which we are most concerned, and to which more than anything else our good financial position is due, namely, the Eastern Bengal State Railway. I had then with me, as I have now, the accounts of that Railway for the last five years, and I showed that the net receipts of that Railway had risen from 67 lakhs to 70 lakhs in 1893-94, and to 87 lakhs estimated in the present year. The capital of that Railway has, during the same period, increased from 10 to 10½ crores, while the net returns on that capital have increased from 5·1 per cent. to 8·2 per cent. Now you all, as practical men and men of business, know very well that a working concern of that kind which brings in 8·2 per cent. per annum is an extraordinarily good investment. If we went into the market and wished to sell that Railway, we could get not ten or ten and a-half crores, but almost double that amount. And, therefore, I assert that our assets in the form of railways and canals and public works, so long as they produced returns of that kind, are not merely equal to our liabilities as the Secretary of State has said; but are worth much more than the money actually spent upon them,—worth far more than would cover the whole of the public debt in India. I can hardly conceive how a gentleman in the position of the Editor of a great financial paper in England came to utter a criticism like that, except by an explanation which impugns either his intelligence or his honesty.

"I will only say, in conclusion, that I congratulate myself, and I congratulate the Council, upon the turn which the debate has taken to-day. It has not only been eminently useful and practical, but I am satisfied that it will raise the reputation of this Council in the eyes of the Provincial Councils of India in general."

The Council adjourned to Saturday, the 6th April, 1895.

GORDON LEITH,

CALCUTTA ;  
The 22nd April, 1895.

Assistant Secretary to the Govt. of Bengal,  
Legislative Department.

*Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 and 1892.*

The Council met at the Council Chamber on Saturday, the 6th April, 1895.

**Present :**

The Hon'ble Sir Charles Paul, K.C.I.E., Advocate-General, *presiding*.

The Hon'ble H. J. S. Cotton, C.S.I.

The Hon'ble Sir John Lambert, K.C.I.E.

The Hon'ble D. R. Lyall, C.S.I.

The Hon'ble C. E. Buckland.

The Hon'ble T. D. Beighton.

The Hon'ble H. H. Risley, C.I.E.

The Hon'ble R. C. Dutt, C.I.E.

The Hon'ble Rai Durga Gati Banerjee Bahadur, C.I.E.

The Hon'ble Surendranath Banerjee.

The Hon'ble L. Ghose.

The Hon'ble Maulvi Serajul Islam Khan Bahadur.

The Hon'ble J. G. Womack.

The Hon'ble Maulvi Muhammad Yusuf Khan Bahadur.

The Hon'ble C. E. Smyth.

**NEW MEMBERS.**

The Hon'ble Mr. Risley and the Hon'ble Rai Durga Gati Banerjee Bahadur took their seats in Council.

**LICENSES FOR ARMS.**

The Hon'ble Babu Surendranath Banerjee asked :—

Will the Government be pleased to lay on the table the report of the Commissioner of the Dacca Division, with reference to the question asked in Council on the 23rd March last, regarding licenses granted for the carrying of arms? Is it the case that licenses granted by the Magistrate of Dacca permit the carrying of arms only in the village or the town where the holder of the license may happen to reside, and not throughout the whole district? Does the Government approve of this restriction? If not, will the Government be pleased to direct that the restriction be withdrawn, and the holder of the license be allowed as before to carry arms throughout the whole district, and with the permission of the Commissioner throughout the whole Division?

The Hon'ble Mr. Cotton replied :—

"It appears that this subject was under enquiry before the Hon'ble Member's original question was put, the Commissioner of Dacca having on the 12th January last asked the Magistrate of Dacca his reasons for restricting a license to carry arms to the limits of the village within which the licensee resides.

"The Magistrate of Dacca explained on the 3rd February that the great majority of persons who ask for gun licenses state that they require guns either for the protection of their homes from robbers or of their fields from pigs and deer. He considers that for such persons a license to use a gun within the limits of their own village is sufficient, and that it is undesirable to allow them to carry their guns round the country with the danger of their being used in agrarian disputes. He adds that the limitation of the license to a village is not enforced in the case of zamindars, whose interests extend over several villages, or of travelling traders or persons of position generally.

"The Lieutenant-Governor does not think that the action of the Magistrate as thus explained has been injudicious, and he is not aware that any complaints have been locally made, but he has authorised the Commissioner, if any application is made to him, or if he thinks it necessary to interfere in any particular case, to extend the operation of any such license to a larger area than the village or to the whole district.

"When a gun license is countersigned by the Commissioner of a Division it is valid not in the Division only, but throughout all the districts in Bengal which are subject to the Lieutenant-Governor."

### THE LAND RECORDS MAINTENANCE BILL.

The Hon'ble Mr. BUCKLAND in presenting the Report of the Select Committee on the Bill to provide for the maintenance of Records of Rights in Bengal, and for the recovery of the cost of Cadastral Surveys and Settlements, said:—

"I do not propose to make any remarks on the present occasion, but will reserve what I have to say until the next meeting of the Council. I will only mention that a copy of the Report was sent to the Hon'ble THE MAHARAJA OF DARBHANGA, who has left Calcutta, and that this morning I received a telegram saying that he authorised me to sign the Report on his behalf, reserving to himself the right of moving amendments."

### THE CALCUTTA PORT ACT, 1890, AMENDMENT BILL.

The Hon'ble Mr. RISLEY moved for leave to introduce a Bill to further amend the Calcutta Port Act, 1890. He said:—

"It will be convenient that I should explain at the present stage the provisions of the Bill and the nature of the alterations it will make in the Act. The Act itself is a consolidating Act which incorporates the old Act of 1870; gives certain powers to the Port Commissioners, lays down their constitution, and gives them all the powers which are requisite for the working of the Port. The amending Bill, which I have the honour to introduce, contains two kinds of sections: *first*, it contains amendments, which may be described as ordinary amendments, embodying those changes which experience in the working of the Act has shown to be necessary. Some little time ago the question of amending the bye-laws of the Port Commissioners arose, and those bye-laws were sent for opinion to the then acting Advocate-General. He held that in some respects the bye-laws went beyond the section of the Act which gives the power to pass bye-laws. That section belonged to the original Act, X (B.C.) of 1870, and had been repeated, unaltered, in the more recent Act of 1890.

"The necessity for amending the Act having arisen out of these bye-laws, a Committee of the Port Commissioners was appointed to look through the entire Act and see what other amendments were needed, and on their proposals were based the sections of the Bill which I have described as ordinary sections. With respect to these sections there is no urgency in point of time: and if they were not passed till two or three months hence, no practical difficulty would arise. But besides these there is another class of sections, in respect of which considerable urgency may be claimed. These sections are intended to relieve the very important petroleum trade from certain legal difficulties with which it is now beset—difficulties which are causing considerable hardship, and may cause something approaching to actual embarrassment. Fortunately for the necessity of passing an amending Act quickly, the ground has been very thoroughly cleared for us by the action which has been taken by the Port Commissioners and the Chamber of Commerce. Negotiations went on between the two bodies for some time last year; a representative Committee was appointed by the Chamber of Commerce, which went into the matter very thoroughly, and all the questions which arose were discussed between them and the Port Commissioners, and an agreement was arrived at. The best legal advice was obtained, and since then action has actually been taken and money has been spent by the Port Commissioners on the faith that their action would be legalised, and this we are pledged to do as early as possible.

"I will now go through the amending sections of this Bill as briefly as I can, taking first those which are in the nature of ordinary amendments, and then taking the sections which are specially framed to relieve the petroleum trade.

"Section 2 of the Bill corrects a verbal error in section 13 of the Calcutta Port Act, III (B.C.) of 1890. It will be seen that section 12 of the Act gives power to the Local Government to grant leave of absence to the Vice-Chairman and to appoint a person to officiate as Vice-Chairman during such absence on leave, and sub-section (2) of section 13 enacts that 'the person appointed under this section to act for the Vice-Chairman' shall have certain powers; but this reference should be to the preceding section 12, under which a person is appointed to officiate as Vice-Chairman, and not to section 13; so that the amendment to be made in sub-section (2) of section 13 is a purely verbal amendment.

"The next section we have to deal with is section 32 of the Act, which confers upon the Port Commissioners, among other things, the power of fining their officers and servants. It is proposed to form these fines into a fund from which it should be open to the Commissioners to grant compassionate allowances to their officers and servants, and to utilise the same for purposes other than those which are contemplated by section 57 of the Act. It has been held by Counsel that all sums collected as fines by the Port Commissioners would be merged in the general revenues of the Port, and could not be formed into a fund such as that which is now contemplated.

"The 4th section of the Bill amends sub-section (2) of section 35 of the Act, the wording of which has been slightly altered. The only point, however, which arises is that the Port Commissioners wish to take power to carry passengers in their tramways, which, as the section stands, they have no power to do now. It is not contemplated to initiate a large passenger service, but under certain circumstances the Port Commissioners may consider it desirable to take passengers which they have no power to do now.

"I will for the present pass over section 5 of the Bill, which I shall refer to later on in connection with the sections of the Act relating to the trade in petroleum.

"Section 8 of the Bill amends section 106 of the Act, which deals with passenger boats which ply for hire within the Port, that is to say, boats, steam-ferries and the like which have been registered under the Act. Section 106 empowers the Port Commissioners to levy tolls on such vessels, but for a long time past the Commissioners have been levying charges for certain services, such as surveying, issuing licenses, painting numbers, giving tickets, and so forth. It has been pointed out by Counsel that the section is limited to the levy of tolls on such boats, and does not include charges for such services; it is therefore desirable that the existing practice should be legalised.

"The next sections of the Bill, 9 and 10, amend sections 108 and 109 of the Act. These sections provide for the imposition of additional tolls to meet a deficit in the income of the Port Commissioners which is liable to arise, and which has in fact arisen by reason of their liability to the payment of interest upon their debt; and the way in which the deficit has hitherto been met is by the imposition of a uniform rate of 4 annas per ton on all goods landed and shipped in the Port. The Port Commissioners represent that this uniform rate of charge is not a convenient arrangement, that it is liable to bear hardly on some articles of Commerce and nominally upon others; they therefore want full power to distribute this burden equitably according to the character of the goods which are landed or shipped. They accordingly propose to take power to levy additional, general, or differential rates of toll with reference to all goods, according to weight, measurement, number of articles, value, and so forth, and, if necessary, to distinguish between imports and exports. The section looks a somewhat complicated one, but I understand that it has been very carefully considered and drafted by Mr. Woodroffe, which, I think, should afford a sufficient guarantee of its correctness.

"Section 16 of the Bill, amending section 126 of the Act, is the section empowering the Port Commissioners to make bye-laws. As I said in the first part of my statement, when these bye-laws came up, it was found that a

great many of them were not covered by the sections of the Act, and the Advocate-General proposed that the section should be amended in the manner suggested. The second part of the section, sub-section (b), has reference to the petroleum sections.

"This disposes of the first class of amendments, ordinary amendments with reference to which, as I said, there is no claim to urgency. These in themselves are quite sufficient to justify legislation, but they would not warrant my asking for a suspension of the Rules of Business. The sections relating to petroleum stand on quite a different footing. They authorise the Port Commissioners to provide facilities for the petroleum trade at Budge-Budge. When the Budge-Budge warehouses were originally started, I think in 1888, they were treated in effect as bonded warehouses. Importers were allowed to put their cases of oil into these warehouses, and to keep them there until they wanted them for delivery to purchasers, and the duty was only collected at the time when the goods were taken out for sale. The time during which petroleum was kept in these warehouses was more than what was allowed in the case of ordinary bonded warehouses, where goods cannot be kept for indefinite periods of time; but here there was no limit of time. About this time last year the Collector of Customs discovered that the system of bonding petroleum at Budge-Budge was illegal; that the Budge-Budge warehouses were not a 'bonded warehouse,' and that the procedure then existing was altogether bad in law. The Collector accordingly enforced the law, and the result was that duty had to be paid on all goods brought into these warehouses within four months of their being landed. This caused considerable hardship to the importers of petroleum, because the trade in petroleum having been conducted on the assumption that oil could be bonded for an indefinite period, prices were adjusted to that state of things. Obviously you can sell cheaper if you can spread the interest upon your money over a long period of time. About the same time there was a very remarkable increase in the imports of petroleum; an enormous quantity of oil was brought in, and there was no warehouse accommodation. The Port Commissioners had to direct where the oil should be stored; and, for want of room, large quantities of it were stacked in the open, and I imagine there must have been some considerable damage done. Not very long after that a special Act was passed in this Council to relieve the Port Commissioners from the legal liability which, it was understood, attached to them in respect of the landing and storing of petroleum, and that Act was passed at a single sitting of the Council. The difficulties which had arisen in connection with the petroleum trade were taken up by the Chamber of Commerce, who appointed a Special Committee to consider and report on the question. The report of this Special Committee was adopted by the General Committee of the Chamber, negotiations took place with the Port Commissioners, and an agreement was come to on the subject. It was agreed that in future, instead of importers landing petroleum themselves, the Port Commissioners should land all petroleum. Not only should they land it in the technical sense, which, I understand, is merely receiving it after it is put over the vessel's side, but they should also undertake the process known as 'stevedoring;' that is to say, they should send men into the hold and pass it over the side of the vessel. Importers, it was said, were not always very desirous of landing petroleum quickly, and it was desirable to have the means of putting pressure upon them. It was also settled that the Port Commissioners should not do the work themselves, but should do it by the agency of Contractors, or at any rate that they should have the option of doing so; that bonded warehouses should be provided for the storage of petroleum; that the oil should be stored there as long as the Commissioners thought fit; that the Port Commissioners should give a security bond to the Customs for any duty due on imports of petroleum; that they should issue warrants specifying that so much petroleum had been received, and that such warrants should pass from hand to hand when the goods were transferred; finally—and this is an important condition—it was agreed between the Port Commissioners and the Chamber of Commerce that the Commissioners should be exempted absolutely from liability for damages arising from fire, however caused; while they should be liable for loss arising from deterioration, and so forth, only so far as it could

be shown to arise from the negligence of the Commissioners' servants. The agreement thus arrived at was understood to be satisfactory to both parties. The Port Commissioners were at first under the impression that no legislation would be required, except for the purpose of creating bonded warehouses. They thought all the other measures contemplated could be carried out under the existing law, and they acted on that supposition. Subsequently, however, they found that the landing of petroleum by them and its custody also required amendment of the law.

"It will now be convenient if I take up in order the sections which refer to the petroleum trade, and in the course of my explanation I shall be able to show what the legal questions are which have to be met. The first section which is intended to relieve the petroleum trade is section 5 of the Bill amending section 90 of the Port Act of 1890. This section will in fact enable the Port Commissioners to land all goods through Contractors, and in the special case of petroleum, but not in the case of other goods, it will enable them to do what is known as 'stevedoring'. Next come sections 6 and 7, which amend section 104 of the Act, and they add a fresh section—104A. Under section 104 of the Act, the Port Commissioners have only authority to employ Contractors or other outside agency to land cargo from boats or vessels which are known as inland vessels, and the object of the new section is to extend this power to all vessels, including sea-going vessels. Obviously it is necessary to make this change, as the vessels by which petroleum is imported are all sea-going vessels.

"The next petroleum sections are sections 11 to 14 of the Bill, which amend sections 113 to 116 of the Act; and here come in the legal difficulties to which I have referred. I stated just now that the Port Commissioners were originally under the impression that, as far as the landing and custody of petroleum are concerned, no legislation is required. They thought they would simply have to waive certain privileges conferred upon them by sub-section (2) of section 113, which provides that 'if any owner, without any default on the part of the Commissioners, fail to remove any goods from the premises of the Commissioners within two clear working days from the time of landing, such goods shall remain on the premises at the sole risk and expense of the owner.' It was explained that the legal effect of the section is to relieve the Commissioners of any liability which attaches to them as Warehousemen. They cannot incur liability as Warehousemen for any period exceeding two days. The view taken by the Port Commissioners acting upon legal advice was that this was a privilege attaching to them, and therefore one that they could waive. They said in effect there is no necessity to legislate; we will waive our privilege and take your petroleum. But the view subsequently taken by Counsel was that this is not enough, that it was a privilege conferred upon them by way of trust, and that the Port Commissioners, as representatives of the public, were bound to strip themselves as soon as possible of their liability as Warehousemen, and therefore they could not get out of the position affirmed by the Act. Acting on the assumption that they could take action without legislation, the Port Commissioners have spent Rs. 1,50,000, and they have committed themselves to an expenditure of Rs. 3,00,000 for extension of their warehouses, and since the 15th of January they have been taking in large quantities of petroleum, although, technically speaking, they are not entitled to do so under the law; and it is clear that their position must be legalised as soon as possible.

"The next set of sections begins with section 15, which introduces four new sections, 122A to 122D. These sections provide, first, that, with the consent of the Local Government, the Port Commissioners may, by notification in the *Calcutta Gazette*, declare any warehouse belonging to the Port Commissioners to be a bonded warehouse for the purposes of this Act. I understand that under the Customs Act, when such a notification has been made, all the conditions which arise with regard to bonded warehouses will apply to such warehouse. Section 122B empowers the Commissioners to store goods in such warehouses as long as they think fit, but in the case of petroleum it frees them absolutely from any liability for loss by fire, however arising, or for any deterioration or diminution in quantity by leakage or otherwise, unless caused by negligence of their servants. This was settled by agreement between the Port Commissioners and the representatives of the trade in petroleum. Section 122C authorises the

Port Commissioners to give a bond for payment of the import duty due on goods stored in their bonded warehouses or for the due exportation of such goods, and when such security has been given, no further security shall be required by the Customs. Section 122D enables the Port Commissioners to issue warrants in a form laid down by the Act, which shall be negotiable by endorsement, and shall entitle the persons to whom they may have been endorsed to receive delivery of the goods. These sections contain provisions which I may say are absolutely necessary to carry out the agreement come to between the Chamber of Commerce and the Port Commissioners. The Commissioners, so far as they could undertake to do so, undertook to obtain legal warrant for the construction of bonded warehouses for the convenience of the trade, and the trade, I understand, counted upon this, and they are certainly, as far as I can judge from the course of the negotiations, entirely justified in looking to the Legislature to restore what was the ordinary practice in consequence of which the trade in petroleum grew up; and if there is any delay in passing this Bill through the Council, there will be great disturbance and considerable embarrassment to the trade.

"I might remind the Council that last year they took very speedy action to relieve the Port Commissioners from certain liabilities under which they lay in consequence of the state of the then existing law, and I think they are equally bound on the present occasion to pass any measure which may be necessary, having regard to the agreement which has been come to between the representatives of the petroleum trade and the Port Commissioners. Fortunately there is the less difficulty in passing this Bill, inasmuch as in regard to those portions of the Bill which may possibly be considered contentious, the interested parties are agreed, the best legal opinion has been taken, and the Bill has been actually drafted in accordance with that opinion."

The Hon'ble Mr. SMYTH said:—"I beg to support the motion proposed by the Hon'ble Mr. RISLEY.

"I may mention that in June last year, the Chamber of Commerce appointed a Sub-Committee, representing the various interests connected with the kerosine-oil trade, to enquire into the working of the kerosine-oil depôt at Budge-Budge.

"For some considerable time it was felt by those connected with this trade that the working of the depôt at Budge-Budge was not wholly satisfactory. On several occasions ships and steamers loaded with kerosine-oil had to be delayed outside the limits of the Port, there being no accommodation for them at Budge-Budge. The mercantile community thought that the accommodation should be increased. The Port Commissioners showed that full advantage was not taken of the accommodation already provided. It was then decided by the Chamber of Commerce to appoint the Sub-Committee I have before mentioned. The Sub-Committee reported to the Chamber, who addressed the Port Commissioners on the state of affairs at the Budge-Budge depôt, pointing out that the arrangements for working the discharge, loading and storing of kerosine-oil were extremely unsatisfactory, and that a radical change should be made. And the Chamber pointed out that the only satisfactory solution of the difficulty, as far as they could see, was for the Port Commissioners to become responsible for the loading, unloading and delivery of the oil. In other words, for the whole working of the depôt at Budge-Budge precisely in the same manner as they are responsible for the unloading of goods at the jetties. And they further urged that it was necessary for the requirements of the trade that the Budge-Budge depôt should be constituted a bonded warehouse.

"It is to enable the Port Commissioners to carry out the recommendations of the Chamber of Commerce that this Bill is now introduced into Council. The matter is an urgent one, as large shipments of oil are shortly expected in Calcutta. I would, therefore, cordially support the amendment of Act III of 1890."

The Hon'ble Mr. WOMACK said:—"I also wish briefly to support this motion. Speaking as a member of the Port Commission, I know that the provisions of the Bill before the Council are extremely desirable and extremely

urgently needed. They have been very carefully considered both by a Sub-Committee and by the full body of the Commissioners, and the amendments have been all carefully drawn by the best legal advisers, so I trust that no time will be lost in passing the Bill into law."

The Motion was put and agreed to.

The Hon'ble Mr. RISLEY also applied to the President to suspend the Rules of Business to enable him to introduce the Bill, and to move that it be read in Council.

The Hon'ble THE PRESIDENT having declared the Rules suspended—

The Hon'ble Mr. RISLEY introduced the Bill and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble Mr. RISLEY also moved that the Bill be referred to a Select Committee consisting of the Hon'ble MESSRS. LYALL, WOMACK and SMYTH, the Hon'ble RAI DURGA GATI BANERJEE and the Mover.

The Motion was put and agreed to.

The Council adjourned to Saturday, the 13th instant.

CALCUTTA;

## ESTIMATES OF THE OUTTURN OF RABI FOOD- CROPS AND OF CERTAIN IMPORTANT SPECIAL CROPS IN BENGAL FOR 1894-95.

**THE following is published for general information.**

REVENUE DEPT.,  
The 19th April 1895.

C. E. BUCKLAND,  
Secy. to the Govt. of Bengal.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

*Note on the outturn of Kabi food-grains and of Tobacco, Sugarcane  
Opium, Mulberry and Ganja in Bengal for 1894-95.*

1. *Explanatory*.—The present return of the estimates of outturn of *rabi* food-crops and of certain *important special crops* embraces all the crops shown in the return published last year, and also *boro* or summer rice, which has been added to make the return complete for *rabi* food-crops.

2. *Character of the season.*—The latter part of the last monsoon season was characterised by unusually late and heavy rainfall which lasted till the end of the first week of November, being particularly heavy in Bihar, Chota Nagpur, and North Bengal. The late rainfall interfered with the timely preparation of land, and in many districts prevented the sowing of the whole of the usual *rabi* area. In parts of Eastern Bengal sowing was interfered with by the late continuance of the floods. From the end of the first week of November there was practically no rain until after the middle of January. The prospects of the crops were improved by the rain which fell generally during the third week of January in these Provinces, especially in Bihar, but sparingly in Orissa.

In February the rainfall was below the normal except in the Patna Division; and the Eastern Bengal districts had no rain. The light rain which fell in most districts in the second and third weeks of March improved the prospects of the crops a little.

3. *Area sown with rabi crops.*—The area sown with *rabi* food-grains this year is estimated at 9,206,300 acres against 9,616,600 acres estimated to have been cropped last year. The areas sown this year in Orissa are in excess of those of last year, while in other parts of the Province there appears to have been a falling off in consequence of heavy and late rainfall during the last monsoon.

4. *Outturn of the rabi food-grains.*—Out of the 45 districts from which returns have been received, only five\* districts estimate the outturn of the *rabi* crops at 16 annas, 26 districts, including all the districts of the Patna and Bhagalpur Divisions (which together contain over 60 per cent. of the whole *rabi* producing area of these provinces), report crops varying from 12 to 15 annas, 13 districts from 8 to 11 annas, and one

\* Rangpur, Champaran, Muzaffarpur  
Malda, and Angul and Khondmals.

district, viz., Pabna, returns a 7-anna crop. The mean outturn of the *rabi* crops for these provinces may be estimated between 13 to 14 annas or over three-fourths of an average crop.

In the preliminary report on the wheat crop of this year, published on the 30th January 1895, the character of the crop was estimated at about 15 annas. The present returns show a slight reduction in the previous estimate of outturn.

5. *Special crops*.—The special crops reported on are tobacco, sugarcane, opium, mulberry and *ganja*.

*Tobacco*.—The tobacco crop which is affected by the same climatic conditions as the *rabi* food-grains in general, is estimated in the attached return to yield an outturn of 13 annas.

*Sugarcane*.—This crop was slightly injured by heavy rainfall. It may be expected to yield about a 14-anna crop.

*Opium*.—The excessive rain which fell during October interfered with the timely preparation of land and the sowing operations. The outturn is estimated as above that of last year in Muzaffarpur, Darbhanga, and Monghyr, but as rather less than that of last year in other districts of Bihar.

*Ganja*.—The ganja crop in Rajshahi is estimated to yield an outturn of 16 annas. The good crop is attributed to favourable moisture in the soil.

W. C. MACPHERSON,

*Director of the Dept. of Land Records  
and Agriculture, Bengal.*

CALCUTTA,  
*The 10th April 1895.*

STATEMENT I

Estimate of outturn of Rabi Food-grains of Bengal, 1894-95.

1	2	3	4	5	6	7	8	9	10	11
District	Total area of district in acres	Total area in district under cultivation in acres	Names of rabi crops	Area in acres	Area in acres	Area in acres	Area in acres	Area in acres	Remarks by District Officers	Remarks by the Deputy Commissioner and Agriculture Officer Bengal
Burdwan	1,23,080	1,23,500	Wheat	2,100	1,40	1,400	1,40	1,40	In the Sader subdivision the outturn of rabi crops for this year has not been good owing to scarcity of rain at the time of sowing. The crops in the Sader subdivision will be somewhat less than in the Sader subdivision. In the Sader subdivision the outturn of rabi crops for this year has not been good owing to scarcity of rain at the time of sowing. The crops in the Sader subdivision will be somewhat less than in the Sader subdivision.	The Collector returned the normal area last year's area and this year's area under wheat as 1,31,190 and 6,000 acres respectively. The figures shown in columns 5, 6 and 7 have been taken in preference from the first wheat forecast, 1894-95.
			Barley	9,000	8,00	8,00	8,00	8,00

District.	Total area of district in acres.	Total area in district estimated to be under cultivation in acres.	Names of rabi crops.	Approximate normal area under each specified rabi crop in acres.	Approximate area last year under each specified rabi crop in acres.	Estimated area this year under each specified rabi crop in acres.	Taking 16 annas to represent the average outturn, how many annas represented outturn last year?	Taking 16 annas to represent the average outturn, how many annas will represent this year's outturn?	Remarks by the District Officer.	Remarks by the Department of Land Records and Agriculture, Bengal.
Bankura	1,577,442	642,820	Wheat	6,500	4,900	5,000	Auras 12	Auras 14	There was a little increase in the outturn of the rabi crops owing to a favourable state of the weather. Last year 'rabi millets' were included with 'other pulses.' They have been shown separately in this statement.	
			Barley	4,000	2,000	2,900	15	14		
			Boro or summer rice	1,100	900	1,000	12	12		
			Rabi millets	2,900	2,100	2,100	15	14		
			Gram	10,000	6,000	7,700	14	13		
			Other rabi pulses	6,000	11,000	11,500	15	13		
			Total	27,800	27,800	31,800	14	13		
Midnapore	3,332,809	2,111,500	Wheat	700	700	700	14	15	In the Sadar subdivision owing to seasonable rain, the outturn will be better than last year's, and is expected to approach the average. In the Chital subdivision the outturn will be less this year owing to excessive rainfall during the sowing time. In the Contai subdivision there is decrease in area and outturn, due to abnormal rainfall. In the Tanak subdivision there is a short outturn, due to deficiency of rainfall.	
			Barley	200	200	200	13	14		
			Boro or summer rice	5,400	4,500	4,500	12	12		
			Rabi millets	300	100	100	12	11		
			Gram	1,500	1,100	1,300	13	13		
			Other rabi pulses	17,800	16,800	17,400	14	14		
			Total	186,500	170,800	174,200	12	14		

Locality	1,085,069	702,399	Wheat	...	...	100	100	100	100	6	16	The outturn is more satisfactory than in the previous year, owing to timely rain.
Hooghly	1,085,069	702,399	Wheat	...	...	100	100	100	100	6	16	The outturn is more satisfactory than in the previous year, owing to timely rain.
			Barley	...	...	100	100	100	100	12	15	
			Boro or summer rice	...	...	100	100	100	100	12	15	
			Gram	...	...	100	100	100	100	3	12	
			Other rabi pulses	...	...	100	100	100	100	10	15	
24 Parganas	1,671,638	1,223,600	Total	...	...	95,000	64,100	70,400	104	104	15	The normal acreage shown under head 'gram,' and increase in the area sown with 'other rabi pulses' in the present return differ from those shown in the return for the preceding year, owing to the excessive rainfall towards the close of July and in the beginning of October and in November last, there was a good deal of water in the fields up to a late period. Hence the entire normal area under the head 'other rabi pulses' could not be cultivated. The outturn is more favourable this year than that of the last year owing to seasonable rainfall.
			Wheat	...	...	30	300	300	300	12	16	
			Barley	...	...	100	100	100	100	15	15	
			Boro or summer rice	...	...	100	100	100	100	15	15

under these crops. The low lands with abundance of water were well suited for ber-dhan, and the railways of the Naur and the Nagaland districts look to these crops in preference to others. This also accounts for the decrease in time as a matter of other crops, the yield of wheat was so satisfactory, they are now up to the present year. The areas under ber-dhan refer to Naur and Nagaland districts only.

The decrease in return is due to the better outturn of wheat is due to seasonable rainfall, and the decreased outturn of barley to early rains.

The want of a timely rainfall affected the outturn of wheat and gram; the excessive rainfall late in October damaged the prospects of other rabi pulses.

Pabna	1,170,980	524,560	Wheat Barley Boro or summer rice Rabi millets Gram Other rabi pulses	25,000 10,100 7,200 26,100 50,000 133,900	23,000 17,000 7,500 27,500 50,000 125,200	25,000 17,000 7,500 22,800 50,000 125,300	8 8 8 9 8 18	16 6 7 7 8 24	There has not been any rainfall since sowing. If it rains even now, the outturn may be a little better than what is shown here. The Subdivisional Officer of Sirajganj reports that the late season and lack of rain have spoilt the prospects of barley. Boro dhan is chiefly sown on char land where it is a mere chance if the crop will come to anything at all; land sown in rabi millets is ploughed up in March if the sowings have not come up well, rabi pulses are commonly sown without any cultivation on the chance of rabi. All these crops are thus entirely dependent on the winter rain which has failed this year. The gram crop is bearing very few pods, but the Subdivisional Officer has no other explanation to offer, though it is not so dependent on the rain.	
			Total	215,500	213,800	23,300	71	7		
Dacca	1,740,680	997,700	Barley Boro or summer rice Rabi millets Gram Other rabi pulses	8,200 10,000 400 1,400 11,500	8,200 9,400 400 1,000 11,500	9,200 9,900 400 1,000 117,700		9	The decrease in the area sown with "other rabi pulses" is due to the flood water not having subsided till the end of November. The outturn is below the average owing to want of rain since sowing.	
			Total	136,500	131,000	133,000	9	9

Owing to excessive rainfall about the time of ploughing, full normal area could not be sown. The rain only ran made the rain crops behind time and the return is expected to be below the normal.

In the Siler sub-division wheat to be sown, the return has been expected to be above the normal. The low level of the river has not allowed the rain crops to be sown in time. In the River sub-division, owing to the low level of the river, the rain crops have not been sown in time. In the River sub-division, owing to the low level of the river, the rain crops have not been sown in time.

Owing to the delay in the cessation of the rains and the position of sowing time, less and was sown than normal and last year.

The decrease in the area sown is due to the excessive moisture at the time of sowing, but the weather, which continued favourable, has much benefited the cereals and pulses and the crops are average this year.

Good rainfall has benefited the rabi crops all around. Every acre in the Sagar and Braka subdivisions will be a 16-anna one. In Sagar the floods did not subside till late, and the cotton will be about 14 annas. In Madhupura the cotton will vary from 14 to 1-anna.

The decrease in the area sown is due to the delay of timely rain. The return of rabi food-grains depends on rainfall, and if there be a good shower of rain during this month, a 16-anna out-turn is expected.

STATEMENT II.  
Estimate of Outturn of Important Special Crops of Bengal, 1894-95.

1	2	3	4	5	6	7	8	9	10	11
District.	Total area of district in acres.	Total area in district estimated to be under cultivation in acres.	Names of special crops.	Approximate normal area under each special crop in acres.	Approximate area last year under each special crop in acres.	Estimated area this year under each special crop in acres.	Taking 10 annas to represent the average outturn, how many annas represented out-turn last year?	Taking 10 annas to represent the average outturn, how many annas will represent this year's outturn?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
Burdwan	1,729,150	1,285,500	Tobacco { Sugarcane Mulberry	900 21,500 6,000	900 21,500 6,000	900 21,500 6,000	Annas. 13 94 12	Annas. 114 11 11	In the Sadar subdivision the outturn of the crops has not been good this year owing to scarcity of rain at the time of sowing. In the Kaina subdivision the outturn will be the same as that of the last year, as there was heavy rainfall in October and November. In the Katwa subdivision ploughing and sowing were late owing to heavy rains. In the Kankaraj subdivision the outturn was bad owing to excessive rainfall after sowing.	
Birbhum	1,124,023	900,000	Sugarcane { Mulberry	8,000 2,000	8,000 2,000	8,000 2,000	8 12	12 12	There was want of rain at the time of sugar cane planting, and consequently some injury was done to it. Heavy rain in August and want of rain at the time of maturity have affected the growth of sugarcane. Mulberry is harvested several times a year. This year, owing to heavy rain, the <i>Sorata</i> and <i>Asota</i> birds were not so bad. <i>Chitra</i> band may be a little better.	
Bankura	1,077,440	642,560	Tobacco { Sugarcane Mulberry	4,000 20,000 200	4,000 20,000 200	1,800 15,000 200	12 8 12	134 12 14	The cultivation of sugarcane this year has increased a little owing to the favourable state of	

Midnapore ...	8,292,540	2,111,500 { Tobacco ... Sugar cane ... Mulberry ...	5,100 17,700 21,000	4,500 17,500 20,400	50 17,500 19,700	10 11 12	104 114 12	the weather. This has also increased the cultivation of all the other crops and improved their outturn.  In the Ghatal subdivision the outturn is likely to be far below the average owing to excessive rain during the ploughing and sowing time. In the Jamik subdivision the outturn is short owing to deficiency of rainfall. In the Contai subdivision mulberry cultivation is gradually disappearing.
	1,056,080	702,900 { Tobacco ... Sugar cane ... Mulberry ...	1,400 13,700 900	1,450 13,200 900	1,500 13,400 900	11 12 12	15 15 15	
	1,611,025	1,223,800 { Tobacco ... Sugar cane ... Mulberry ...	3,850 14,500	600 2,100	3,000 14,300	16 14	14 16	
Nadia ...	1,758,100	1,303,500 { Tobacco ... Sugar cane ...	103,000 15,400	78,400 14,700	73,500 13,200	19 19	10 11	The normal averages shown under heads "Tobacco" and "Sugar cane" in the present return differ from those shown in the return for the preceding year. This is partly due to the revision of the normal area and partly to the fact that in some of the subdivisions tobacco and sugarcane have been grown this year for the first time. The outturn is better this year than at of last year, owing to excessive rainfall at the time of ploughing and sowing.  Heavy rainfall in the cultivating and sowing seasons much affected the crops; hence the decrease in the areas sown. The outturn is low owing to the same reason.
	1,372,100	983,500 { Tobacco ... Sugar cane ... Mulberry ...	900 17,800 62,500	900 17,100 62,900	900 17,100 62,900	10 19 14	10 13 14	
	1,572,000	1,116,800 { Tobacco ... Sugar cane ...	27,900 21,000	25,900 16,800	19,600 15,400	13 12	12 13	
Jessore ...								There was excessive rainfall at the sowing season.

District.	Total area of district in acres.	Total area in district cultivated in acres.	Names of special crops.	Approximate normal area under special crop in acres.	Approximate area last year under special crop in acres.	Estimated area of this year under special crop in acres.	Taking 16 annas to represent the average outturn, how many annas represented out-turn last year?	Taking 16 annas to represent the average outturn, how many annas will represent this year's outturn?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
Tippera ..	1,584,240	1,167,900	Tobacco Sugarcane ..	67,700 36,400	9,000 13,800	9,900 14,900	Annas, 12 14	Annas, 12 13	The decrease in area under tobacco is due to want of rain in the Sagar subdivision. There is much doubt as to the correctness of the figures in column 5, and the area under tobacco seems to be overstated as compared with that under sugarcane.	
Noakhali ..	1,050,240	819,500	Sugarcane ..	17,900	17,900	17,900	9	9	Owing to the want of rainfall since January 1903, the outturn is expected to be much below the average.	
Chittagong...	1,594,541	506,000	Tobacco Sugarcane ..	11,300 5,900	11,300 5,900	11,300 5,900	9 10	9 8	The decrease in the outturn is due to excessive rainfall in the month of July 1904, which prevented the crop from being properly matured.	
Patna ..	1,330,560	993,500	Opium (poppy) Tobacco Sugarcane ..	11,500 3,600 15,300	11,000 3,000 15,100	11,500 400 15,200	13½ 13½ 13½	12½ 12½ 12½		
Gaya ..	8,015,680	2,207,500	Opium (poppy) Sugarcane ..	53,000 23,000	53,000 29,000	53,000 27,600	15 15	13½ 15	The outturn is estimated to be below normal owing to excessive rainfall at the ploughing and the sowing time. The outturn of sugarcane is same as that of last year.	

Shalabad ..	2,800,000	1,712,500	Opium (poppy)	42,700	22,500	20,400	84	13	<p>In the Arrah subdivision, owing to excessive rain, the outturn has not reached the average. The low lands retained moisture till the sowing time had expired. In the Buxar subdivision there has been some increase in the area, as the rate at which the opium is purchased has been increased by Government. In the Bihar subdivisions on the crop was not sown in the moist time on account of excessive rain. In the Saran subdivisions on the crop has suffered to a certain extent on account of excessive rainfall.</p>
				3,600	3,000	1,700	11	1 1/2	
				46,800	29,900	20,400	84	6 1/2	
Saran ..	1,678,055	1,382,500	Opium (poppy)	42,800	43,700	42,100	16	15	<p>Some low lands were not sown owing to excessive rain, and by the late cessation of rain, and in some the poppy did not come up well. The outturn of sugarcane is low owing to late cessation of rain.</p>
				1,700	1,700	1,700	16	16	
				51,200	52,300	52,200	16	14	
Champaran	2,359,840	1,492,000	Opium (poppy)	60,000	60,000	60,000	17	16	<p>Owing to the excessive moisture in the fields, the sowings were much behind time. The reduced outturn is due to the excess of moisture at the ploughing and sowing time.</p>
				20,000	20,000	20,000	15	12	
Muzaffarpur	1,921,920	1,445,000	Opium (poppy)	20,000	20,000	20,000	14	16	<p>Though the sowing operation was much retarded owing to continued and heavy rain, the subsequent weather has been very favourable, and the outturn is better than last year's, though less than normal in the case of tobacco.</p>
				31,000	31,000	31,000	12	13	
				24,000	24,000	24,000	14	16

*The 22nd April 1895.*—The following is published for general information.

C. E. BUCKLAND.

*Secretary to the Govt. of Bengal.*

No. 7T.R., dated Darjeeling, the 22nd April 1895.

From—C. E. BUCKLAND, Esq., Secretary to the Govt. of Bengal, Revenue Dept.,  
To—The Hon'ble BABU SURENDRANATH BANERJEE, Member of the Bengal  
Legislative Council.

It will be within your recollection that in the course of a speech at the meeting of the Bengal Legislative Council on the 13th April, you referred to a report which had reached you to the effect that much extravagance had been shown in carrying on the survey-settlement of the estates of His Highness the Maharaja of Hill Tippera in the Tippera district, and as an instance of such extravagance you had been told that permanent survey marks had been bought for 9 rupees when they might have been obtained for 9 annas each.

Since the meeting of the Council, the Lieutenant-Governor has caused enquiries to be made on this subject, and he has been referred to paragraph 247 of the report of the Director of Bengal Surveys for the year ending 30th September 1893, of which a copy is enclosed for your information.

It will be seen from this paragraph that for the Northern portion of the estate 8,500 stone prisms were obtained at an average cost of Re. 1-1-4 each including carriage, and for the Central and Southern Divisions of the estates 16,000 pottery cylinders were obtained at an average cost of Re. 0-5-2 each. The Director made efforts, but in vain, to procure stones for this purpose from the adjoining hills; but the cost incurred is not, in the Lieutenant-Governor's opinion, open to the charge of extravagance.

2. This letter will be published in the *Calcutta Gazette* for general information.

247. In the Northern Division roughly dressed prism-shaped stone pillars were embedded at all the trijunctions and side stations, the dimensions of the pillars being 3' x 9" x 9" x 9" for trijunctions,

Permanent marks.

and 2' x 5" x 5" x 5" for the other stations. Nine hundred and sixty-nine large and 2,531 small stone pillars were procured in August 1892, through the Collector, from the Bengal Stone Company. Of these 745 large and 2,154 small pillars have been embedded in the manner stated above; and the remainder, which are in excess of the number required, have been stored at the villages of Kasba and Nyanpur under the charge of the village chaukidars. The cost of these stone pillars including boat-hire, &c., is Rs. 3,794.

For the Central and Southern Divisions, 2,000 large and 14,000 smaller glazed pottery cylinders were procured from the Raniganj Pottery Works for marking the theodolite stations. The large cylinders, the dimensions of which are 3 feet in length and 8" diameter, were used for marking the triple junctions; the smaller cylinders were used for marking the other stations, the dimensions being 2 feet in length and 2" diameter. Every station was thus permanently marked. The total number of cylinders used

Permanent marks.

is 11,211 large 1,164 large and 3,625 small cylinders, which are in excess of the required number have been stored at Comilla. The cost of these cylinders inclusive of railway freight, boat-hire, &c., is Rs. 5,192.

## WEATHER AND CROP REPORT.

*For the week ending the 22nd April, 1895.*

**Burdwan.**—Rainfall at Burdwan '90. Weather somewhat stormy. Lands are being prepared for autumn rice. Price of common rice varies from 11 to 20 seers per rupee in the district.

**Midnapore.**—Rainfall '83. Weather cloudy with occasional showers. Indigo and *boro* (spring rice) are doing well except in Tamluk, where more rain is required. Common rice sells from 16 to 22 seers per rupee. Fodder and water sufficient.

**24-Parganas.**—Rainfall '67. Weather seasonable. No crops on the ground except *boro* paddy in parts of thana Bankipur, the harvesting of which has just commenced. Ploughing is going on for early crops. Condition of cattle good. Fodder and water sufficient. Rice sells at—

				Srs.	
Sadar	...	...	...	11 to 13	} per rupee.
Barasat	...	...	...	16	
Basirhat	...	...	...	20	
Diamond Harbour	...	...	...	15	

**Murshidabad.**—Rainfall '52. Weather seasonable: occasionally cloudy. Harvesting of *rabi* finished. Cultivation of jute has commenced. Indigo, mulberry and *boro* paddy doing well. Fodder sufficient. Price of common rice 17 seers per rupee.

**Khulna.**—Rainfall at Satkhira 2·70; in other sub-divisions nil. Weather hot. Cultivation of land for *aus* (early rice) is going on. Common rice sells from 18 to 22 seers a rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall '3. More rain wanted. Cultivation of *bhadoi* rice and jute going on. Common rice selling from 16 to 17 seers a rupee. Cases of death among cattle from small-pox reported in the head-quarters of Dinajpur and in its vicinity. No complaint for fodder and drinking water.

**Rangpur.**—Rainfall '24. General rainfall has much benefited the crops. Prospects are now good.

**Pabna.**—Rainfall 1·13. Weather hot and cloudy. Rain has done much good to standing crops and helped sowing of paddy and jute. More rain wanted. Common rice selling at 17 seers per rupee. Fodder and water-supply sufficient.

**Dacca.**—Rainfall '04. Days hot, nights cool. Prospects of crops good. Sowing of jute and rice continues. Common rice selling at 18 seers per rupee. No cattle-disease. Fodder available.

**Chittagong.**—Rainfall nil. Weather sultry. Grass withered in places for want of rain. Prices steady. Cattle-disease dying out. Water-supply sufficient.

**Patna.**—Rainfall '56. Threshing of *rabi* crops and weighment of opium going on. *Mung* crop doing well. Common rice selling at 18 or 18½ seers per rupee.

**Gaya.**—Threshing of *rabi* crops and weighment of opium continue. Prices about normal. Fodder and water sufficient.

**Champaran.**—Rainfall at Motihari '06. Common rice selling at 16 seers a rupee. Fodder and water for cattle sufficient.

**Darbhanga.**—East wind prevailing. Early rice and *mung* sowings nearly over. Rain much wanted. Common rice selling at 17 seers per rupee. Fodder and water for cattle sufficient.

**Bhagalpur.**—Weather heavy and normal. Standing crops are doing well. Water and fodder sufficient.

**Purnea.**—Rainfall '07. Continuous east winds. Rain badly wanted for all crops. Price of common rice varies from 16 to 24 seers per rupee in the district. Supply of fodder and water sufficient.

**Cuttack.**—Rainfall 1·53. Weather seasonable. *Dabua* (spring rice) harvest continues. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 26 seers 4 obitaks per rupee.

**Hazaribagh.**—Rainfall at Sadar 1·78. Heavy rain on Friday (19th) and slighter showers on other days of the week. Weather cool. Ploughing in progress. *Mahua* harvest nearly finished; outturn fair.

**General Summary.**—There was rain in Orissa and Chota Nagpur and over the greater part of Bengal Proper. In Bihar and in Eastern Bengal little or no rain was reported during the week. The lands are being ploughed and the sowing of the *bhadoi* rice and jute is going on. More rain is required in parts of Northern and Eastern Bengal and in Darbhanga and Purnea. Spring rice and indigo are doing well. In some districts the harvesting of the spring rice has begun. The *rabi* harvest is over, and the mean outturn for the province is estimated between 13 and 14 annas. Cattle-disease in Chittagong is said to be dying out, but it has broken out in an epidemic form in the Nilphamari subdivision of Rangpur, and some cases are also reported from the head-quarters of Dinajpur and its neighbourhood. The price of common rice is steady.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,  
The 23rd April, 1895.

C. E. BUCKLAND,  
Secretary to the Govt. of Bengal.

# SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF MARCH 1895.

The chief features of note in the weather of the past month have been—

1. A general deficiency in pressure, the difference from the normal varying from a few thousandths of an inch in the south-west of Bengal to .03 inch in the east of Assam.

2. Almost normal temperature. There was a small defect in the mean daily temperature, except in Bihar and North and East Bengal, where there was a slight excess. Day temperatures were generally in excess in Orissa and parts of South-West and East Bengal, while the nights were comparatively cool, except in the northern districts.

3. Owing to the relatively lower pressure in the eastern districts the westerly wind current has been well sustained, except towards the end of the month, when a low pressure area in the north-west of India caused a reversal, and easterly winds became more general.

The wind system both as to direction and force has been very similar to that of last year, when the rainfall for the month of March was much below the usual amount.

4. The rainfall has been very scanty in all districts, even in East Bengal, which last year received very heavy falls, more especially in the hill districts.

5. Though thunderstorms have been of frequent occurrence, especially towards the end of the month, the rainfall attending them has been very light and frequently absent altogether. The cause of this is probably to be found in the relative strength of the sea winds, which have been more intermittent this year than usual, and the easterly winds from Assam which appear to have been weakened by the low pressure which obtained in the eastern districts during the month.

At the beginning of the month weather was generally of the kind experienced at the end of the north-east monsoon period. This was largely due to relatively high pressure in Bengal and low pressure in Burmah. A fall of pressure set in on the 3rd over Bengal and continued steadily for several days, bringing about a reversal of the conditions on the previous days. The northerly winds became south-westerly and temperature increased till there was a large excess in all districts. The area of relatively high temperature at first included only the northern districts, but it gradually extended southwards over the whole province, and high temperatures were reported from Orissa, Chota Nagpur, and South-West Bengal by the end of the first week. From being 5° below the normal readings had increased to as much, and in places to 7°, above the normal. These changes were due to a slight disturbance which crossed the province from the west.

A second disturbance followed in a few days, but its influence was felt more in the northern districts, where light rain fell, and the temperature was largely reduced. One of the most marked features of the weather during these days, that is in the second week, was the low pressure which continued for some time, but became most marked between the 14th and 16th. The greatest defect was in the northern districts, and the arrangement caused the steady south-westerly or westerly air movement in all districts except at some of the extreme northern stations, where wind directions were at times north-easterly. While these south-westerly winds prevailed, temperature rose daily in the western districts and excess in places was as much as 9°.

Large changes soon followed in consequence of the approach of two depressions from the west—the first about the 17th and 18th and the second after two or three days. The latter crossed the north of the Bay and gave rise to a low pressure area in Burmah and northerly winds in these parts for some days. On the 17th and 18th numerous thunderstorms occurred in Lower Bengal, and caused a large reduction of temperature, but very little rain. At some places light showers fell, but in many others over which the storms passed there was no rainfall. After the passage of the depression there was a large rise of pressure in Chota Nagpur, and the rise continued moderately for some days, resulting in high pressure in Bengal, as compared with the south of the Bay, and a northerly or north-westerly wind circulation in the north-west angle of the Bay. The shallow low pressure in the north of the Bay and in Burmah continued till the 22nd, and from the 20th till the 22nd thunderstorms again occurred in all districts, but chiefly in the west on the 20th, and in the central and eastern districts on the 21st. As in the previous case these thunderstorms were attended by very light rainfall, but the fall of temperature was very large. The defect in mean temperature in Chota Nagpur on the 20th was 8°; on the 21st it was 10° over the greater part of the south of the province, while in North Bengal it was 11°.

Still another shallow depression affected the weather in Bengal about the 26th and 27th passing across the central districts and Assam. Temperature and humidity increased, and the sky was overcast at many stations, while light rainfall was fairly general. The extreme northern stations in East and North Bengal and the Assam stations continued to be affected by the depression on the 27th, and Gnatong reported a heavy snow-storm. Over the remainder of the province, however, fine settled weather had commenced accompanied by a large decrease of humidity and comparatively low temperature. Till the end of the month fine settled weather prevailed.

*Pressure.*—At the beginning of the month pressure was above the normal, but after the first day or two a fall commenced which, continuing for some time, resulted in a rather large defect. This defect prevailed during the greater part of the first-half of the month, after which readings were above the normal by moderate amounts till the end of the third week. Towards the end of the month the distribution was nearly normal and changes

generally small. The means for the month are slightly above the normal in the south of Chota Nagpur, but in all other districts there is defect, varying from  $\cdot 004^{\circ}$  in the west of Bihar and South-West Bengal to  $\cdot 03^{\circ}$  at Sibsagar.

**Temperature.**—In the early part of March temperature was above the normal over a great part of the province. There were considerable irregularities, however, not only in the various districts, but also in the night readings as compared with the day. Thus the mean maximum temperature for the first week was above the normal in all districts, but the mean minimum was in excess only in the northern districts, the nights being comparatively cool in the south of the province. In the second week there were similar peculiarities. The local disturbances which were fairly numerous during the latter half of the month caused large changes of temperature, especially on the 20th and 21st. During the third week the total range in Bihar was  $51^{\circ}$ , and in South-West Bengal it was  $47\cdot 6^{\circ}$ . Towards the end of the month changes were smaller, but the average temperature remained generally below the normal. The means for the month are above the normal in North Bengal, East Bengal and Bihar, and below in the other districts.

The following table shows the variation of temperature from the normal, week by week, for the month at nine typical stations in different districts of the province:—

STATIONS.	WEEK ENDING 2ND MARCH 1895.			WEEK ENDING 9TH MARCH 1895.			WEEK ENDING 16TH MARCH 1895.			WEEK ENDING 23RD MARCH 1895.			WEEK ENDING 30TH MARCH 1895.

**Rainfall.**—During the first part of the month very little rain fell. The thunderstorms which occurred during the latter half caused local falls generally of very small amount. Though these falls were of not unfrequent occurrence, the total is much below the average for the month in all districts. The fall in East Bengal is 1.1 inches, as compared with 2.86 inches. In North Bengal and Chota Nagpur it is  $\cdot 6$  inch, and in the other districts less than half an inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for month of March 1895:—

METEOROLOGICAL DIVISIONS.				TEMPERATURE.					RAINFALL.								
				Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month of low or low normal mean of month.	Of month.			Rainy days.			Since 16th October 1894.

\* Mean of 6 days.

*Explanation.—Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the The humidity of the atmosphere is expressed in percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean at the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question ratios in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 20th of April 1895.

# SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 20TH OF APRIL 1895.

THE weather conditions during the week under review have been unusual both because of the large differences from the normal noticeable in pressure, temperature, &c., and also because of the steadiness with which these abnormal features have prevailed from day to day throughout the week. In the first place the pressure distribution has been unusually uniform, and it is, no doubt, because of this arrangement that the other elements have been so largely affected. The easterly winds, which have been very general, were due to the high pressure in the north-eastern districts, and the numberless thunderstorms which have occurred from time to time throughout the week, but chiefly in the southern half of the province, must have been a more indirect result of the same cause. Though the rainfall has been, as is usual in such cases, very irregular, and frequently not heavy, the temperature has been exceptionally low in all districts, except at times in the extreme north and east of the province.

The changes of pressure have been of very little importance, as they have led to only slight modification of the abnormal distribution. A brisk rise on the 14th, the first day of the week, added considerably to the large excess, which prevailed at the end of the previous week, and the difference from the normal varied from a tenth of an inch in Chota Nagpur to nearly a quarter of an inch in North Bengal. Isobars lay almost north and south, and a strong easterly current prevailed except in Orissa, Chota Nagpur and part of South-West Bengal, where winds were south-west. It was probably due to the interference of these wind systems that thunderstorms caused general rainfall in South-West Bengal, Chota Nagpur and Orissa on these days. In Bihar and East Bengal rainfall was almost entirely absent till towards the end of the week. On the 15th pressure increased slowly in Bihar, Chota Nagpur and Orissa, and generally fell slightly over the rest of the province and the Bay. The easterly winds continued and extended further west, so that the westerly winds were reported from the extreme western stations only. Defect in temperature varied from 2° in the north to 10° at Chabassa. A brisk to moderate fall of pressure followed on the 16th, but as it was general over the whole area, the distribution remained unaltered, as well as the wind circulation and temperature. Similar small and irregular changes occurred on the 17th. On the 18th, however, a moderate fall of pressure in East and Central Bengal, and a moderate rise in the west of the province, gave very uniform readings over the province and the Bay. The wind circulation, though feeble, was westerly over the southern half of Bengal and local storms were less frequent, while temperature rose, but not so much as to remove the large defect in Chota Nagpur and South-West Bengal. The rise of pressure in Bengal on the 19th, as compared with that over the Bay, gave higher readings at the northern stations, and a north-easterly wind circulation prevailed. Rainfall was more general in the northern districts and temperature again fell, defect varying from 2° in the east to nearly 9° in Chota Nagpur. Similar conditions prevailed on Saturday the 20th, except that the rainfall was more general in the south-western districts.

Pressure has been liable to unimportant oscillations, and the large excess which prevailed at the beginning of the week continued throughout. The means for the week are therefore unusually high, and excess varies from .1 inch in Chota Nagpur to .2 inch in the north of the province.

Temperature has been very low over the whole province throughout the week, but especially in the south-western districts. The mean defect in Chota Nagpur is 6°·9, in South-West Bengal 5°·8, and in Orissa 5°·5. In North Bengal and Bihar it is over 4° and in East Bengal 2°·1.

The actual temperatures registered during the week and their variations from the normal temperature for the season are seen in the table below, where the average maximum, minimum and mean temperatures for the week at some typical stations in different districts of the province are compared with the normal values for the same period. It will be seen that though night temperatures are below the normal at all these stations except Purnea, the difference in the day readings has been much greater, especially at Bardwan and Patna.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending Saturday, the 20th of April 1895.

	Normal mean maximum temperature for the week ending 21st April.	Actual mean maximum temperature for the week ending 20th April 1895.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 20th April.	Actual mean minimum temperature for the week ending 20th April 1895.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 21st April.	Actual mean daily temperature for the week ending 20th April 1895.	Variation of actual mean from the normal.

**Rainfall.**—Local showers have been frequent in all districts except East Bengal and part of Bihar. These showers have, as is usual in the case of thundershowers, been very irregular in amount, but the average falls for the various districts are all above the normal except that for East Bengal, where only a third of the usual amount fell. Orissa received 1·75 inches, Chota Nagpur 1·32 inches, South-West and North Bengal nearly ·8 inch, Bihar ·41 inch, and East Bengal ·32 inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 20th of April 1895 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.		Since 1st of month.		Since 1st April 1895.

				3.69

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newmann's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications to August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; t, thunder; <, lightning; p, passing temporary showers; &, dew; ⊕, solar corona; lr, lightning reflection.

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.) the 27th of April 1895	760		

*Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 and 1892.*

The Council met at the Council Chamber on Saturday, the 13th April, 1895.

### Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Governor of Bengal, *presiding*.

The HON'BLE SIR GRIFFITH EVANS, K.C.I.E., *Offg. Advocate-General*.

The HON'BLE SIR JOHN LAMBERT, K.C.I.E.

The HON'BLE D. R. LYALL, C.S.I.

The HON'BLE J. A. BOURDILLON.

The HON'BLE C. E. BUCKLAND.

The HON'BLE T. D. BEIGHTON.

The HON'BLE H. H. RISLEY, C.I.E.

The HON'BLE R. C. DUTT, C.I.E.

The HON'BLE RAI DURGA GATI BANERJEA BAHADUR, C.I.E.

The HON'BLE SURENDRANATH BANERJEE.

The HON'BLE L. GHOSE.

The HON'BLE MAHARAJA SIR LUCHMESSUR SINGH BAHADUR, K.C.I.E., of DARBHANGA.

The HON'BLE MAULVI SERAJUL ISLAM KHAN BAHADUR.

The HON'BLE J. G. WOMACK.

The HON'BLE MAULVI MUHAMMAD YUSUF KHAN BAHADUR.

The HON'BLE C. E. SMYTH.

## NEW MEMBER.

The Hon'ble SIR GRIFFITH EVANS took his seat in Council.

## PROMOTION OF JOINT-MAGISTRATES TO DISTRICT JUDGESHIPS.

The Hon'ble MAULVI SERAJUL ISLAM KHAN BAHADUR asked :—

Whether it is a fact that, under the existing system, Joint-Magistrates of a few years' standing and with no experience of civil work, are promoted to the office of District Judges, and have to hear appeals against the decisions of Subordinate Judges of long standing and varied experience? Whether the working of the system is found satisfactory?

The Hon'ble MR. RISLEY, in the absence of the Hon'ble MR. COTTON, replied :—

“All the permanent Judges in Bengal are senior officers and vary in standing from fifteen to thirty-four years' service. But it is occasionally found necessary to appoint junior officers to officiate as District Judges during the absence of the permanent incumbent on leave or deputation, and acting Judgeships for temporary periods are therefore held in some cases by officers of only eight or nine years' service who have not yet made their choice between the Judicial and Executive branches. The Lieutenant-Governor is always careful to select officers as senior as possible to act as Judges, and proposals which have been made to strengthen the hands of Government in this direction, by postponing the date at which the selection of the Judicial or Executive line is made, are now under consideration.”

## THE LAND RECORDS MAINTENANCE BILL.

The Hon'ble MR. BUCKLAND moved that the Report of the Select Committee on the Bill to provide for the maintenance of the Records of Rights in Bengal and for the recovery of the cost of Cadastral Surveys and Settlements be taken into consideration in order to the settlement of the clauses of the Bill. He said :—

“I intimated at the last meeting of the Council that I would reserve the observations which I had to make till the present occasion, so that hon'ble members might have time to read the Report of the Select Committee and make themselves better acquainted with the provisions of the Bill. It therefore now devolves upon me to explain briefly what is stated in the Committee's report. But before doing so, I wish to offer some remarks on the speech of the Hon'ble THE MAHARAJA OF DARBHANGA at the meeting of the Council, which was held on the 9th of March last, and which was published for the first time in the *Calcutta Gazette* of the 10th instant. When his remarks were made in Council on the 9th of March, I replied at the time that I was not able to hear all that the hon'ble member said, and that I would reserve to a future occasion such answers as I might have to give to what was then said. The objections which were taken by the hon'ble member to the Bill, have, as he will find, been met in several very important particulars. The Hon'ble THE MAHARAJA complained that there were two omissions in the early portion of the Bill to which he felt he should call attention. The first of these omissions was that there was no provision for the procedure to be followed by the Registrar of Mutations. I can say now that we have provided amply sufficient procedure for the Registrar of Mutations to follow. We have in doing so adopted mainly the provisions of the Indian Registration Act III of 1877. The next omission to which the Hon'ble THE MAHARAJA drew attention was the omission of any provision for abolishing patwaris as they now exist under Regulation XII of 1817. That was no doubt a very fair criticism for the Hon'ble THE MAHARAJA to offer on the Bill. At that moment our tongues were tied and we could say nothing upon this point, but since then, as is known to the Council, there have been published in the *Calcutta Gazette* of the 27th March last, some forty pages of printed

correspondence between this Government and the Government of India with regard to the repeal of Regulation XII of 1817, which is the law relating to patwaris. Any one who has read the papers which are contained in that correspondence will see at a glance that any hopes held out by the Lieutenant-Governor to the landed interests in Bihar that the patwaris would be abolished have, so far as this Government is concerned, been amply redeemed by the efforts we have made to get this Regulation repealed. The patwari has been there described in various terms. He has been termed a pestilent fellow, a political pawn, and a potential nucleus of a village community. His merits and his shortcomings have been set out and regarded from every point of view. He has perhaps not been aware of all that was being written about him. If he had been, he would, I think, have been astonished to find that he had become a person of so much importance. It would not be becoming on my part on this occasion to offer one word of comment on this correspondence. A decision has been arrived at by the Government of India on a full consideration of all that has been said for or against the patwari, and I take it that it is becoming to this Government, as it is their duty, to bow loyally to that decision. But this is a sufficient explanation, I venture to think, of the omission to which the Hon'ble THE MAHARAJA drew attention in his speech on the 9th March. The hon'ble member also on that occasion suggested that the Rules made under the Act, before being put into force, should be published in the *Calcutta Gazette* for a period of at least three months. We have endeavoured to meet his wishes by providing in the present revised Bill that the Rules published under the Act should, in accordance with section 190 of the Bengal Tenancy Act, be published for one month before they are confirmed. The hon'ble member also drew our attention to section 16 of the original Bill in which we provided for a penalty on persons who fail to do their duty by giving notice of transfers or successions, and said that he thought that liability to such penalty should be safeguarded by some such words as voluntarily or negligently. It will be found that the words 'voluntarily or negligently' have been introduced into section 24 of the Bill as now revised. The Hon'ble THE MAHARAJA also drew attention to section 21 of the original Bill, an important section, which provided for payment of the cess by tenureholders and raiyats and for its recovery through zamindars. The objections taken by my hon'ble friend were primarily that it was a distinct violation of the conditions of the Permanent Settlement. I venture to think that that is an objection which has long since been disposed of, but we have more than met the hon'ble member's wishes by striking out all reference to a cess from the Bill. As I said in Council on a previous occasion, there is a bill to be paid, and all that has to be done is to settle the simplest way of paying it. There is no occasion now to call it a cess, because we have, in deference to the wishes of the proprietary interest in the land which my hon'ble friend so ably represents, struck out all the provisions of the original Bill for collecting the charges through the zamindars. These are the main criticisms which the Hon'ble THE MAHARAJA levelled at the Bill at the meeting of Council to which I have referred, and I think I may claim that steps have been taken to meet his wishes to a great extent.

"With these preliminary remarks I will now turn to the Report of the Select Committee. We purposely drafted the Report fully and amply, and I think we have dealt with nearly every section of any importance; it will not therefore be necessary for me to take up the time of the Council by going through all the sections of the Bill. The main changes which have been made in the Bill, if I may so say, consist in making certain omissions. We have, for instance, omitted sections 4 and 5 of the original Bill, which provided additional facilities for the operation of the Land Registration Act. The idea of Government was, as advantage was not taken of the benefits of the Land Registration Act as generally and completely as might have been, to afford facilities for the better carrying out of that Act by the multiplication of small registration offices; but it has been on the whole thought better to drop those provisions, and the result therefore is that this Bill now assumes the form of providing for the maintenance of the record of tenant rights and not of proprietary rights also.

"We have also omitted section 8 of the original Bill which provided for proprietors of land being called upon to state whether they omitted or refused

to admit transfers which it was proposed to register. That section has been omitted in deference to the views of landlords whose interests my hon'ble friend the MAHARAJA of DARBHANGA represents,

"We have also struck out section 9 of the original Bill, which provided for the presumptive force to be given to mutations in rent suits. It has been thought better to leave the courts to decide what force entries in these registers should have. It would of course be very difficult to say beforehand what force they should have. That they will have some force in evidence is certain, having regard to section 35 of the Evidence Act, as they will be entries in a public register and therefore they will be relevant facts.

"We have also struck out the old section 13. I said so much on the last occasion on this point that I need only mention that that was the section which provided that the Civil Courts should forward to the Sub-Registrars memoranda of decisions arrived at by the courts affecting rights in land.

"These are the chief changes which we have effected by way of omissions.

"We have also introduced some changes of importance in the Bill which I will briefly recapitulate. From paragraph 7 of the Report of the Select Committee it will be seen that we have provided that notices of transfers may be received after the expiry of four months. Notice would not be absolutely shut out by that period. The proposal now is that, if a notice of transfer is not given within four months, then a somewhat higher fee must be paid, and the person giving the notice will be liable to a penalty; but here again we propose that he shall be saved from being penalised if he comes forward and gives notice of the transfer at any time before proceedings are instituted against him. We have also provided that a notice given by any one person releases all other persons from giving notice of the same transfer or succession, and that registration under the Indian Registration Act of an instrument transferring a tenant right releases all persons from giving to the Registrar of Mutations separate notice of the same transfer. I think that this will be appreciated as a very reasonable concession to the public convenience.

"We have also in section 15 of the Bill now before us provided, as far as one can provide, for continuity in the registration of mutations. The marginal note to this section is:—'Procedure when transferor's name not in record of rights.' The idea is that we should do our best, by notice in the village and by beat of drum, to get hold of the alleged transferor, and if nobody comes forward to deny that the alleged transferor or deceased person through whom succession is claimed was at the time of the alleged transfer in possession, then the name of the alleged transferor will be inserted in the register of mutations. By this means we hope, as far as possible, to maintain continuity of registration. It will be a very difficult thing to do, and possibly there may be blanks in the register, but we have endeavoured to do all we can in the matter.

"We have also dealt in section 23 of the present Bill with what have been called the automatic sanctions of the measure. In dealing with these sanctions we have endeavoured to make it as easy for both parties as we can, and by an amendment, of which notice has not been given, we propose to make the penalty less severe to persons failing to do their duty under the section; or rather we propose to give more opportunities for getting off the penalty. We have provided that a person who would otherwise lie under a disability is to be freed from the disability if he can show that he has given the notice. We do not now make it necessary for a party to prove that the transfer has actually been registered; we exculpate him if he has given notice and done all that was in his power to do. We have also at the end of section 23 provided that the court in which any suit is filed shall give the defendant sufficient time to enable him to give such notice. In fact, as the section now stands, and as I propose to further amend it, sufficient opportunities will be provided for any person who is at all anxious to do his duty under the Act to escape without being penalised. But we maintain, and we must maintain, that there must be some pressure on the parties to do what is required, and as much concession is being made as is compatible with the maintenance of some pressure on landlords and tenants respectively to do their duty under the Act.

"I do not propose to detain the Council by running over the sections which now form Part II of the Bill relating to the procedure which has been adopted, as will be seen from the marginal references given in the Bill,

from the Indian Registration Act. I will therefore pass on to Part III, the Part which provides for the recovery of the expenses of survey and of the preparation of a record of rights. As I said just now, all reference to a cess has been removed, and this Part of the Bill really assumes now the form of an amplification of section 114 of the Bengal Tenancy Act. We do not propose to strike out that section or to repeal it. What is proposed is that we should take power to adopt an alternative procedure—a procedure not alternative in its main principles, but alternative so far in that it supplies details which have been found in the actual experience of the working of the section to be wanting. For instance, in section 28 we propose to take power to recover not only from proprietors, landlords and tenants the cost of survey and settlement, but also from rent-free owners and occupiers. It is obvious that they will also derive benefit from survey and settlement proceedings, and it is but fair that they should pay their quota of the expense.

“In section 29 also we have provided for a small point in which some difficulty has been experienced. It has sometimes been held that when a local area, say a district, has been notified for survey and settlement proceedings, the recovery of the charges of such proceedings can only be effected over the same area as was originally notified. We propose therefore to take power to recover the charges of survey and settlement over any part of that notified area in which the survey-settlement proceedings have arrived at a stage to admit of recovery being made. The intention is, of course, that such recovery shall not be made over a very small area such as a field or two, but over some large areas, such as a thana or sub-division, as may be found most convenient.

“The last section to which I shall have to allude now is section 32, in which we propose to take power to recover from the successors in interest of those who were living at the time the survey-settlement proceedings were being carried out. The question has been raised whether, if the persons who were alive at the time when the proceedings were being carried out are not alive or are not forthcoming when the charges for the survey-settlement proceedings have to be paid, their successors in interest should be liable for those charges. We propose now to provide that they should be, so that persons having interests in the land should know that if the charges for survey-settlement proceedings have not been paid by their predecessors, they will have to pay them.

“There is hardly any other change of importance to which I need allude, except perhaps the appellate provisions in section 34. We have provided for an appeal from every order of a Registrar of Mutations affecting any entry in the Register of Mutations, within one month from the date thereof, to the Collector of the district, and that the latter's decision on such appeal shall be final. We have thought over this provision very carefully in Select Committee, and we considered that, having regard to the smallness for the most part of the operations with which this Act will deal, it will be quite sufficient to provide for one appeal to the Collector of the district. I presume that it would always be open to any person aggrieved by such decision on appeal to seek relief in the civil court. It is not necessary for us to say so.

“I do not propose to detain the Council any longer, but before sitting down I should like to thank my hon'ble colleagues in the Select Committee for all the trouble they took and the great assistance they afforded in arriving at the conclusions embodied in the revised Bill. The Committee sat nine times, and I think I may say that every word, every syllable, and every letter in the Bill was carefully considered.

“With these remarks I beg to move the Motion that stands in my name.”

The Hon'ble THE MAHARAJA OF DARHANGA said:—“I take this opportunity to thank the Government and the members of the Select Committee for the very conciliatory way in which they have treated the suggestions made by the various Associations representing the landholders of Bengal. There is, however, one question of principle which I think has as yet been overlooked—but which I mentioned in my speech on a former occasion. Not only the land, lords, but many of the representative associations of the raiyats as well, including the Indian Association, have submitted that cadastral surveys ought to be undertaken only in special cases of agrarian disputes, or in those cases where the zamindars or the raiyats specially ask for it. I do not wish to question

in any way the right of the Government to have a Cadastral Survey even in those cases in which the raiyats or zamindars do not need it for their own purposes, but in all those cases I have always maintained that the expense of making the survey ought to be borne entirely by the Government as was done in the Benares Division. When it comes to the question of the bill being paid, it is only just and equitable that the classes of persons, who have to pay that bill, should first be asked as to their willingness to pay the bill. No doubt the Government was actuated by the best of motives in ordering the Cadastral Survey of Bihar, but it is a question of difference of opinion, and in a matter of this sort I think the persons most interested, that is to say, the raiyats and zamindars, ought to be in a position to know their own interests far better than the Government. Although it may be that there are in many cases some benefits to be derived from a Cadastral Survey, it may be found that the price to be paid for those benefits is much larger than what the parties interested care to pay, and in such cases I think it is extremely unjust to make those parties liable for the payment of the bill of costs. I would therefore have liked to see some provision inserted in the Bill to the effect that where the majority of the raiyats of a village object to the survey, where they think that the expense and vexation that a survey is likely to entail far outweigh the benefits they are likely to obtain; in such cases I think that certainly the raiyats should be exempted from the payment of the expense. The non introduction of any provision of this sort seems to me the best proof of the fact that there are many cases in which the raiyats themselves might object to a survey.

"These are the only remarks I wish to make on the speech which has just been delivered by my hon'ble friend, the mover of the Bill. All the other points contained in my former speech have been met by the alterations which have been made in the Bill by the Select Committee, but the portion of the speech which refers to this point has not been touched. I therefore take this opportunity to enter my most strong protest against this policy of meddlesome Philanthropy which no doubt has been actuated by good motives, but which in many cases, instead of doing any good to the raiyats might do them much harm. I am not speaking here as the representatives of the landlords, but I speak after having consulted such men as the Hon'ble BABU SURENDRANATH BANERJEE and others, who are supposed to be representatives of the raiyats."

The Motion was put and agreed to.

The Hon'ble MR. BUCKLAND also moved that the clauses of the Bill be considered in the form recommended by the Select Committee.

The Motion was put and agreed to.

The Hon'ble MAHARAJA SIR LUCHMESSUR SINGH BAHADUR OF DALBIHANGA moved that, after section 1, the following section be inserted:—

"On the commencement of this Act in any district or part of a district so much of Regulation XII of 1817 as has not been repealed shall be repealed in such district or part of a district."

He said:—"My object in moving this amendment is that after the Cadastral Survey of a district or part of a district has been completed, the work of the patwari practically ceases as far as his submission to Government of any statistical papers are concerned, because, with such an elaborate system of registration of the record of rights, I think all the papers the Government are likely to need will be forthcoming from the office of the Rural Registrars. Over and above this, when the Cadastral Survey of Bihar was first undertaken, a very important section of the community which was represented by the Bihar Planters' Association agreed to the Cadastral Survey on the distinct understanding that the patwari was to be abolished and that they would get certain facilities for the recovery of rents. Although we are very thankful to the Bengal Government for having done their very best to have the patwari abolished, still I humbly submit that unless the patwari is abolished, there will be a sort of feeling among certain classes of the community—it might be an ill-founded feeling—that the Government had broken its promise. I am

not one of those who would for a moment believe that, but still I think that the feeling is likely to be created. I think therefore that the best thing that can be done under the circumstance is, if possible, to abolish the patwari altogether. Then as regards the information that zamindars are often called upon to furnish to the Government in the shape of Road Cess Returns, we find very often that we have to work through these patwaris, and we have no other alternative but to make these patwaris do our work; and very often these patwaris for their own purposes; and knowing very well that zamindars have no power either to dismiss or to punish them in any way, purposely delay in submitting these road cess returns, and in such cases it is not the patwari who is punished but the zamindar who is fined for the delay; whereas really the delay is not caused by the zamindar but by the patwari. However, if the Government still thinks that the zamindar should be made liable for the submission of Road Cess Returns, it is only fair that they should give him the power to dismiss the patwari through whom he has to work, or to punish him for his contumacy."

The Hon'ble THE PRESIDENT said:—"I am obliged to announce to the Council that I cannot allow this amendment to be put. The Council is bound by the Rules which are laid down by the Government of India with regard to the scope or limitation of any Bill which is brought before it or is discussed in it. A clause to abolish this Patwari Regulation was embodied in the Draft Bill which was sent up by the Government of Bengal to the Government of India, but it was struck out by the orders of His Excellency the Viceroy and Governor General of India in Council. It is impossible therefore for the Government to re-introduce a section which has been struck out by the Government of India, and what the Government cannot do a private Member of this Council cannot do. Recognising the great authority of the Hon'ble THE MAHARAJA OF DARBHANGA, both on account of his personal character and the interests which he represents, I thought it right not to interfere until he had finished his speech, but I am obliged to say that I cannot permit any further discussion of the question, and I cannot allow the amendment to be put.

"The same remarks apply to the amendment No. 19 in the List of Business which stands in the name of the Hon'ble Mr. Ghose with the object of providing a summary procedure for the recovery of arrears of rent. It is well known to Hon'ble members and to the Council how entirely I sympathize with the proposal that he has made. But it would be an alteration in the substantive provisions of the Bill which we have received the sanction of the Government of India to introduce, and it is beyond the power of this Government to introduce a substantive change of this kind while the Bill is under discussion. I shall solicit the assistance of my hon'ble friend in preparing a draft of future legislation to carry out the object which both he and I have in view, but I am obliged to say that I cannot allow these amendments to be put to the Council on the present occasion."

The Hon'ble Mr. Ghose moved that section 5 of the Bill be omitted. He said:—

"I do not think it is either necessary or desirable for the purposes of this Bill to retain section 5. It has been pointed out by every public body which has been consulted in reference to this Bill, including the British Indian Association, the Property Defence Association, and last, but not least, the Chamber of Commerce, that under the Road Cess Act landlords are required to furnish periodical returns showing the names of holders of estates and tenures, and also of raiyats and giving various other particulars. It is difficult to see what useful object is to be obtained by insisting upon the submission of certain additional returns under this Bill. I am bound to say that the other day, when I had the advantage of a conversation on this subject with the learned Officiating Advocate-General, he was good enough to point out that there is one particular item of information which was not contained in the returns under the Road Cess Act, and that is the number and description of the particular plots and fields which may be in the possession of various tenants. I submit that even if this additional information is obtained, in my humble opinion it will be of very little use to the Government, and I say,

with reference to the observations of the hon'ble member in charge of the Bill with regard to the presumption of relevancy, that in most parts of Bengal transfers of tenant rights *inter vivos* have no legal validity whatever without the assent of the landlord; and therefore when you have this additional information you will find that, except in the very few cases in which the landlord has acknowledged the transfer for a consideration, and may have made the necessary mutation of names in his own books, his returns will not show these transfers at all. In the majority of cases the names of the old tenants will continue to be retained in spite of any transfer which may have taken place; therefore you will have these zamindari returns mostly in conflict with the official register of mutations, and it is difficult to see how such returns will be of any use. But in spite of this, if the Government still think this information will be of any use, I submit that the better course will be, instead of insisting upon two sets of returns under two different enactments, to facilitate matters the additional information required may be included within the returns furnished under the Road Cess Act, and for that purpose the form given in the first schedule of that Act may be amended. By adopting this course landlords will be saved a great deal of trouble and worry and expense, and instead of their submitting two different sets of returns, one return will suffice. With that view and to spare all unnecessary hardship, I move that section 5 of the Bill be omitted."

The Hon'ble Mr. BUCKLAND said:—"The Government are not prepared to accept the hon'ble member's amendment. The point of the hon'ble member's remarks, if I rightly apprehend them, is that all that is necessary will be supplied by an amendment of the Road Cess Act. I do not know whether the hon'ble member is aware that under the Road Cess Act Returns are not made annually, as we may desire to have them made under the Maintenance of Records Bill. Ordinarily, valuations and re-valuations of districts do not take place until after periods of five years, and it may be longer, and it is considered much better that this Act should be self-contained rather than that another Act should be amended so as to work into the purposes of this Act. There is nothing at all novel in the principle of this section. Ever since the passing of the Patwari Regulations of 1817, it has been within the power of the Government to get very similar information from zamindars. A provision very much to the same effect as section 5 of this Bill found a place in the draft Bill appended to Sir ANTHONY MACDONNELL's Minute of the 25th of September 1893, and a provision similar to this was recommended by the Calcutta Conference of experts in settlement matters, which assembled in the cold weather of 1893-94. I may also point out, as perhaps the Council are not aware of the fact, that in other Provinces power has been taken by the Government to procure similar information from the owners and occupiers of lands. I hold in my hand a selection from the Revenue Laws of the North-Western Provinces, the Central Provinces, Oudh and the Punjab; and I find that by section 9 of Act XIII of 1882, the North-Western Provinces and Oudh Kanungos and Patwaris Act, provision has been made for such information to be furnished by the owners and occupiers of land. I will read an extract of this section to the Council:—

'For the purpose of preparing the registers or accounts prescribed by the said Oudh Land Revenue Act, 1876, or by any rule made thereunder, every owner or occupier of land in any Patwari's Circle, and the agent of every such owner or occupier, shall furnish to the patwari of such circle, the kanungo or such person as the Deputy Commissioner may appoint in this behalf, such information, at such times, as the Chief Commissioner may from time to time by rule prescribe.'

"Again, similar provision is to be found in section 128 of the Central Provinces Land Revenue Act XIII of 1881, and also in section 40 of the Punjab Land Revenue Act XVII of 1887. What we want to obtain (and I think it will be very beneficial to landlords to have on record their view of the state of affairs in their estates as it appears in their own papers), is to have mutations of the record of rights, as they are known to and acknowledged by proprietors, brought into comparison with the transfers brought to our notice by tenants. I know it has been said, and it was said in Select Committee, that it will be impossible for the statements furnished by proprietors to afford any check on the lists of transfers of which notice has been given by tenants. It may be so or

it may not be so; but we think we should get from both sides all the transfers that are effected and acknowledged: and that is the ideal at which the Bill aims. At any rate it is out of the question to amend the Road Cess Act for this purpose and to postpone the filing of these statements for five years or more when we shall want them to be furnished annually. It is therefore my duty to oppose this amendment."

The Hon'ble MAULVI MUHAMMAD YUSUF, KHAN BAHADUR, said:—"In the observations which have been made by the hon'ble mover of the amendment in support of this amendment, I agree to a very considerable extent. The Council will remember that the question raised by this amendment is one of the questions which were largely discussed at the time when the Bill was referred to the Select Committee. On that occasion I ventured to make a full statement of my objections to this section, or rather to the corresponding section in the original. I still entertain the opinion that the section under discussion is out of place in a Bill, the ostensible object of which is to maintain the record prepared under the operation of Chapter X of the Bengal Tenancy Act. That record deals with the details and particulars relating to the tenant's rights. This section is therefore foreign to the principal subject of the Bill. But quite apart from that view, the section is open to objections of a more serious nature. This section is calculated to force the hand of the zamindar in a most unsatisfactory manner. There is some little difficulty in ascertaining the precise law relating to the transfer of a right of occupancy, but I think I stand upon safe ground when I say that, unless there is a custom to the contrary, the transfer of a right of occupancy by the tenant is not valid unless such transfer is effected with the consent of the landlord. Now, if a landlord has to make a return, and you ask him to state who are the present tenants, and whether occupancy rights have been transferred or not, what is the landlord to say? Is he to state in his return, for instance, with reference to a particular tenure which has changed hands, that the old tenant is still his tenant, or is he to state the name of the transferee, or is he to state nothing and keep quiet under that head. If he is to state the name of the old tenant, he makes a false return; if he notices the fact of transfer and states the name of the transferee, then he will be looked upon as having consented to the transfer; if he is to notice the transfer with a note of his objection to the transfer, he will still be held to have treated the transferee as at least in present possession under the transfer, and he will prejudice himself in regard to his rights in various ways; if he says nothing under that head in his return, he will not have complied with the requisition. This objection is sufficiently serious to render it inexpedient that a section like the present should be introduced in a Bill which does not profess to deal directly with the relative rights of the landlord and tenant, but which deals with the register as framed under section 114 of the Bengal Tenancy Act. Of course this objection will not arise if you ask the zamindar to make a return relating to tenant's right in accordance with his own register; but that is probably not what is intended by the Government.

"Again, it is quite clear that other existing enactments contain sufficient provision to enable the Government to obtain every information from the zamindar, and under the machinery of those enactments all necessary information is available, and no possible good is likely to result in multiplying modes of getting information.

"But there is still another objection of a still more serious character. There will be enormous practical difficulty in carrying out this section. The section provides that the zamindar is bound to make a return on the issue of a notification in the *Calcutta Gazette*. The issue of a notification in the *Calcutta Gazette* constitutes all the notice he has of the intentions of the Government that he is called upon to make a return; and if he omits to make a return, certain penal consequences arise. Now, I ask, how many of the ordinary landlords in the mufassal subscribe to or read the *Calcutta Gazette*: their number is exceedingly small, and the large majority of them are even unaware of the existence of the *Calcutta Gazette*. The notice therefore is wholly insufficient. In other existing enactments in the matter of returns, greater facilities are afforded to the zamindars for informing themselves in regard to the intentions of the Government. In the Road Cess Act, section 14, a proclamation is contemplated,

and when a revaluation takes place, the matter is not left to the mere issue of a notification in the *Calcutta Gazette*, but the information is brought nearer home to the zamindars by the issue of a proclamation which is the next best mode of conveying information, the best mode being a special notice issued to every individual zamindar. I submit that this section should be omitted altogether from this Bill, or if it is retained, then some better mode of giving notice should be prescribed, or at all events the question of notice should be considered in connection with the provision relating to a penalty for omission to make a return. I may state that I had an amendment upon this section and also several other sections of this Bill, but I am precluded from bringing forward my amendments in consequence of some little delay in giving notice of those amendments."

The Hon'ble MR. BRIGHTON said:—"With regard to the present amendment and the numerous others which will be placed before us, I desire to remind hon'ble members of this Council of the valuable remarks which fell from the PRESIDENT on the last occasion on which His Honour presided, with regard to the mode in which the Council should deal with the labours of Select Committees, the measure of confidence which the Council should extend to the results of their deliberations, and the reliance that should be placed in the conscientious and painstaking efforts that have brought about these results.

"Perhaps, as a member of the Select Committee, I ought to have left it to some other member of Council to make these observations, but I have no wish to eulogise the outcome of our labours beyond repeating what has fallen from the hon'ble member in charge of the Bill that there is no portion of the Bill which has not received most anxious attention, and no suggestion in the voluminous papers referred to us which has not received full consideration. I desire therefore to associate myself with the remarks made by your Honour on the occasion to which I referred, and further to emphasize very strongly that there could be no Bill to which they are more strictly applicable than the present one. There is no great question of principle involved in this Bill. We have merely endeavoured by a series of details closely interwoven with each other to provide a system which will work automatically for securing a record of transfers of tenant right. The Bill is like a complicated piece of machinery of which the working is stopped if a single pivot be moved. If we deprive ourselves of the additional means of testing the accuracy of the tenants' notices of transfer which is provided by the statements to be submitted by landlords under section 5, we seriously jeopardise the success of the measure. It is essential that we should obtain data from both sources of information. Criticisms have been made by both the hon'ble members who have spoken as to the effect of those statements in embarrassing landlords who wish to protect themselves against the creation of unauthorized rights of occupancy by their tenants. I wish to state most emphatically that the rights of landlords will not in the least degree be affected either by section 5 or any other section of the Bill. Section 5 in no way requires landlords to include in their statements anything except a 'change' in their tenants' rights, and if they do not recognise the validity of a transfer they need not report it. At the same time, if I heard correctly what was said by the hon'ble mover of the amendment, he appears to think that no transfers are valid anywhere unless made with the consent of the landlord. This is hardly correct; for in some parts of the country transfers are valid as being authorised by the custom of that portion of the Province of which the district of Rangpur is an example. The landlord has, however, as I said above, every right to resist encroachments of this kind, and the Bill leaves his rights unimpaired.

"With regard to the mode of publication otherwise than in the Gazette, a suggestion which fell from the Hon'ble MAULVI MUHAMMAD YUSUF, I must confess that, speaking for myself, I regret that the proposal did not reach us sooner, but upon the whole I think we ought to retain section 5 as it stands in the Bill."

The Hon'ble SIR GRIFFITH EVANS said:—"I have one or two observations to offer on the question now under consideration. I do not take the same view

of it which the Hon'ble MAULVI MUHAMMAD YUSUF has done. I put it to the Council that it will really be to the benefit of the landlord that this reference should be made to him. The return he makes will be a public record, and will be considered to be a statement made under compulsion of law, and will be admissible as evidence of relevant facts. It may be that there will be a large number of transfers of occupancy rights recorded, although the zamindar may truthfully say that no changes have taken place in his tenants' rights, because in parts of the country where transfers are not possible without the assent of the zamindar, he would have a right to say that no changes have taken place in his raiyats' rights, notwithstanding that there may have been all sorts of invalid documents made. Therefore, the result would be, as far as the landlord is concerned, that there may be from time to time a large number of transfers registered, which are invalid as not being allowed by custom. Transfers without the consent of the landlord are invalid unless validated by the custom of the place; therefore, in such cases there would, under this section, be the protest of the landlord as evidenced by such transfers not being entered in the statements filed by him under this section. We know that as a rule landlords consent to transfers being made where the transferees are proper persons, and if they are willing to take upon themselves the payment of all arrears due by the transferor, and the landlord does not as a rule take any fee except a sort of registration fee. Wherever this state of things prevail, that is to say, wherever a right of occupancy is not transferable without the consent of the landlord, there the landlord has every right to see that transfers are only made to really *bonâ fide* raiyats. If I were a landlord myself I should take all the care I could to see that a *mahajan* did not come in, and I should, in any case, take care that a tenant who is likely to harass me in many ways should not come in. Moreover, it is very desirable for the Government to know what is the real position and how the Act works, but if transfers are registered by only one of the interested parties, there will be nothing to contradict the register of mutations. The provisions of section 5 of the Bill will enable the landlord to contradict every one of these attempted transfers which he is unwilling to recognise: he need not take any notice, but in effect he will simply say—I do not acknowledge these transfers. Therefore, to my way of thinking, the furnishing of these statements by landlords will be better for the interests of the landlords, and it will undoubtedly better enable the Government to see how the Act works."

The Hon'ble MAULVI SERAJUL ISLAM, KHAN BAHADUR, said:—"I have one observation to make. I think the apprehensions entertained by the learned mover of the amendment may be removed if he will only refer to the provisions of sections 8 and 9 of the original Bill. Section 9 of that Bill provided for service of notice of transfer on the landlord, and section 8 required that the Sub-Registrar should notify to the landlord the fact of such transfer having been recorded, and it was further provided that the entry should be presumed to have been correctly made until the contrary is proved. This matter was well considered in Select Committee, and, after much deliberation and consideration, those two sections were omitted, the result being that there was now no longer any provision for notice being served on the zamindar, and no entry in the register of mutations would be evidence against the zamindar that such transfer had been made; and in place of sections 8 and 9, section 5 has been introduced, which is merely an enabling section to help the Government in checking entries in the registers, but it would not be binding upon the zamindar to acknowledge any transfer. Therefore the apprehensions which are entertained by the hon'ble member are misplaced and have no foundation."

The Hon'ble MR. GHOSE in reply said:—"I only desire to correct a misapprehension into which the Hon'ble THE LEGAL REMEMBRANCER fell as regards my observation as to the invalidity of transfers of tenants' rights. There are of course parts of Bengal in which by custom such transfers are made. Having made that correction and having regard to the opinions which have been expressed by several hon'ble members, I would ask the permission of the President to withdraw this amendment."

The Motion was, by leave, withdrawn.

The Hon'ble MAHARAJA SIR LUCHMESSUR SINGH BAHADUR OF DARBHANGA, by leave of the Council, with drew the motion of which he had given notice that section 5 of the Bill be omitted.

The Hon'ble Mr. GHOSE moved that in line 4 of section 6, after the words "on any part thereof" the words "bearing a separate number in the records of rights" be inserted. He said—

"This is a small matter, but nevertheless it is a matter of some importance. This Bill is intended more or less for the benefit of raiyats, but I venture to think that if you insist on every fractional transfer which may take place being registered, you will, instead of benefiting the class you want to benefit, throw a burden upon the people which they are ill capable of bearing. It is quite right and proper that where a raiyat holds two or three plots of land bearing different numbers in the record of rights, if he parts with plot 1 or with plot 2 or with plot 3, it is quite right and proper that he should give notice of such transfer, and that the change should be noted in the Register of Mutations. But I can well conceive a case of a poor tenant parting with one bigha or with half a bigha of land out of a particular parcel, and it will be hard if in cases of such small fractional transfers he is obliged to go through all these formalities. Besides, what would be the result? I do not know if, when another tenant comes into a portion of a plot, his name is to find a place in the register or how it is to work. This is the commencement of a new reform connected with land registration, and I think we ought to be satisfied with having entire plots registered. That, I think, is as far as it is desirable to go."

The Hon'ble MR. BUCKLAND said :—"The result of this amendment, if it is accepted by the Council, will be that it will be necessary to give notice only of transfers of land which bear separate numbers in the Record of Rights. I think that perhaps the hon'ble member does not quite know what a survey number is. I am not sure that anything which fell from him would lead me to suppose that he is aware of the technical definition of a survey number. I ought therefore to enlighten the Council as to what is the meaning of this term. It corresponds with a field number and is thus defined in page 7 of the Director of Bengal Survey's Report for 1893-94:—

'A field or survey number is an area of which the ownership is separate and the occupant is separate. Each parcel of land lying in one spot, in the occupation of one person or of several persons holding jointly, so held under one title, provided it is all of one soil and is all rented at a uniform rate, shall have a separate number.'

"I may also inform the hon'ble member that, by the adoption of this definition, in practical working, fresh survey numbers are given to every small parcel of land which corresponds to the definition of a holding. I will not go through all the instructions upon the point, but I will refer to the survey handbook by Colonel Barron, which I hold in my hand, containing instructions for cadastral survey parties. One of the Rules provides that the several portions of one enclosure should be mapped and numbered separately, when there has been a legal partition and the partition papers show the location and direction of the shares: this is also required when a portion of an enclosure is held by a sub-tenant: also, when a garden is held rent-free by a tenant: also, when part of a field is fallow or grass, and part is cultivated: also, when on the side of a field, there is a piece of waste sufficiently large to be shown separately from it. I need not state them all; there are ten illustration cases given in which separate survey numbers are now attached to parcels of land which may be very small. As I mentioned at the meeting of the Council on the 9th March last, there are on an average  $2\frac{1}{2}$  of these plots, that is, separate survey numbers to an acre of land, which is equivalent to an average of 1,936 square yards for each survey number, or about 45 yards each way. It is very easy for the Council to imagine what very small plots of land are, under the existing rules and instructions of the Survey Department, treated as separate survey numbers; and it is therefore not very much to ask that whenever any raiyat thinks it necessary to sub-divide his, possibly very small, plot of land, the sub-division should be placed on record. These transactions will be of as much concern to these raiyats as very much larger plots of lands to other persons. The object

of the Bill is not only to keep a record of large transfers, but to have also a record of all these smaller transfers which are of as much importance to the raiyats as larger transfers are to the zamindars. I therefore think it right to oppose this motion on behalf of the Government. I will also ask the Council to look at the question in another way. An average plot of land may be 50 yards by 40 yards, but there are also some very large plots of acres and acres in extent: is it to be held that, when one of these technically so-called survey numbers or plots is of large size, sub-divisions of it ought to be registered, but that in the case of the splitting up of small plots no record of the fractional transfers is necessary? Where is the line to be drawn? What we want is that all these transfers should be registered, and not only transfers of whole survey numbers. I must therefore oppose the amendment."

The Hon'ble MAULVI MUHAMMAD YUSUF, KHAN BAHADUR, said:—"I do not know what good this amendment will be productive of to the raiyats. If it is expedient to provide for the registration of transfers in connection with entire plots of land which bear entire survey numbers, surely reasons do also exist for the registration of portions of such plots."

The Hon'ble MR. BEIGHTON said:—"I have only one word to say supplementary to the remarks which fell from the hon'ble member in charge of the Bill. Section 7, clause (d), provides that 'the notice shall contain such further particulars as the Local Government may from time to time prescribe.' It will be quite possible for the Local Government to prescribe for the notice giving such a description as will secure the identification of particular portions of a plot which have been transferred. For instance, when a portion of a particular survey number has been transferred, 'such further particulars' may include the area of the portion of the plot so transferred, and also the situation of the portion transferred with reference to the points of the compass. So I think the confusion which the hon'ble member anticipates is not likely to arise." Moreover, unless the register of transfers is to include portions of plots, it will not be exhaustive, and the record of rights will be imperfect and therefore valueless."

The Hon'ble MAULVI SERAJUL ISLAM, KHAN BAHADUR, said:—"Although I was a member of the Select Committee I am inclined to support this amendment, and I do so on this ground. I do not think it will be convenient or expedient to register these petty transfers of portions of a plot of land. The holding of a raiyat may consist of several survey numbers, and if he transfers a portion of any lands which are included in any one of these survey numbers, it will be very inconvenient and very difficult not only to register the transfer, but at the same time it will be hard on the raiyat to go to the expense of registering it. It was said by the Hon'ble the Legal Remembrancer that under section 7 (d) a specification of the interest transferred must be given. By the term 'nature of the interest' in clause (b) I understand is meant whether it is a right of occupancy or a tenancy with occupancy rights at a fixed rent, but it does not mean the boundaries of the portion of the holding which has been sold. Therefore I submit that having regard to the great inconvenience and expense to which this provision would put the poor raiyats, the Government ought not to insist upon so much detail. It is, of course, very desirable to have the record complete and perfect, but it is not possible to make everything perfect. I think it will serve the purposes of the Government and of the public if only transfers of entire holdings be entered in the register, and I submit it will not be convenient to go beyond that."

The Hon'ble MR. R. C. DUTT said:—"As a member of the Select Committee to which the Bill was referred, I desire to say a very few words to explain the reasons which influenced me in keeping the section as it stands. The question which has been raised now was raised in Select Committee, and was very thoroughly discussed, and we came to the conclusion that it would be impossible to keep the record of rights complete unless we provided that transfers not only of tenures and holdings, but also of parts thereof, should be duly recorded. The object is to keep the Record of Rights complete and correct up to date,

but if we accept this amendment, I do not see how that object can be attained. The hon'ble member in charge of the Bill has said that what is one plot now may, after transfer of a portion of it, become two plots, and therefore, unless we provide for the registration of such transfer, the record will not be correct up to date, and the object we have in view will be lost."

The Hon'ble Mr. LYALL said:—"I had not intended to speak upon this amendment, but there is one point that I think it necessary to bring to the notice of the Council. I have very serious doubts whether the amendment, as it is worded, will carry out the intention of the hon'ble mover. If the hon'ble members will look back to section 2, they will see that by the term 'Record of Rights' shall be understood the Settlement Record of Tenant-rights, called the *khatian*, or such new edition of such record as may be prepared under Rules made under this Act. It is clear that the Hon'ble Mover does not mean a separate Record of Rights (*khatian*), but that he means a separate survey number. [The Hon'ble Mr. GHOSE said:—"I meant 'survey number.'"] On the point at issue I am at one with the hon'ble members who expressed the views of the Select Committee."

The Motion was, by leave, withdrawn.

\* The Hon'ble BABU SURENDRANATH BANERJEE moved that in line 8 of section 6 the words "or of intestate or testamentary succession" be omitted. He said:—

"In moving this amendment, and having regard to some observations which fell from the Hon'ble the Legal Remembrancer, I wish to say that I do not in the remotest degree wish to imply any reflection upon the labours of the Select Committee. I am grateful to the Select Committee for the way in which they have dealt with this Bill, and I am also grateful to the Government not indeed for having introduced the Bill, but for its conciliatory attitude in regard to this matter which made it possible for the Select Committee to revise the Bill in the way which they had done. But there are some matters of detail in which the Bill is susceptible of improvement. Under section 6 the transferor or the transferee is bound to give notice of the fact of the transfer to the Registrar of Mutations within four months of the date of such transfer. As far as the transferee by succession is concerned under section 15 of the Bengal Tenancy Act, he is required, in the case of a mukarrari tenure, to give notice of the transfer to the Collector. Thus a double duty is imposed upon him by this Bill. *First*, he has to give notice to the Collector, and *secondly*, he has to give notice to the Registrar of Mutations. It is a very serious matter to ask a raiyat to give up his work to dance attendance in our courts of law and to come in contact with all their demoralizing influences. Section 15 of the Bengal Tenancy Act provides that when a succession to a permanent tenure takes place, the person succeeding should give notice of such succession to the Collector. The section says:—

'When a succession to a permanent tenure takes place, the person succeeding shall give notice of the succession to the Collector in the prescribed form and shall pay to the Collector the prescribed fee for the service of the notice on the landlord, and the landlord's fee prescribed by section 12, and the Collector shall cause the landlord's fee to be paid to, and the notice to be served on, the landlord in the prescribed manner.'

"Therefore, so far as permanent tenures are concerned, provision is made for notice of transfer, and the object of my amendment is to obviate the necessity of giving a second notice in respect of the same transaction. Nothing could be easier than for the Collector to send a copy of the notice to the Registrar of Mutations."

The Hon'ble Mr. BUCKLAND said:—"The hon'ble member has referred the Council to section 15 of the Tenancy Act, and has stated that that section provides for notice being given to the Collector of successions to Permanent Tenures. I have always understood the meaning of that section and its object to be to ensure, not only that notice should be given to the Collector, but that a fee should be paid to the landlord. That, I believe, was the main object of that

particular section. It is not so necessary that the Collector should know about the succession. The object was that the fee should be taken and paid over to the landlord. But this does not touch the point at which we aim by section 6 of the Bill, which requires that notice of transfer of all tenures (not only Permanent Tenures) should be given. Therefore I do not see that any case has been made out for the amendment. The hon'ble member wants us not to do what is proposed, on the ground that it is provided for in section 15 of the Tenancy Act; but we say that that section has a very different object, and does not cover the whole field which we are trying to cover by our section. I shall therefore oppose this amendment and any amendment which aims at limiting the number of transfers we can possibly get into our net."

The Hon'ble Mr. R. C. DUTT said:—"I have one word to say on this point. I desire to oppose this amendment for the same reason which I mentioned just now. The hon'ble member in charge of the Bill has pointed out that the section of the Tenancy Act which the hon'ble mover of the amendment quoted, does not cover the whole field intended to be covered by section 6 of this Bill. The object of the Bill is to have a complete record of transfers of all holdings. The section quoted relates to the transfer of Permanent Tenures only. I believe that, as a fact, there are 50 or 100 transfers of ordinary holdings to one transfer of a Permanent Tenure; therefore section 15 of the Tenancy Act does not cover the object we have in view. We have therefore provided for the registration of all successions; otherwise the record would not be complete and correct up to date."

The Hon'ble Mr. BEIGHTON said:—"I am bound to say that both the hon'ble member in charge of the Bill and I feel that there is some force in what has been urged by the hon'ble mover of the amendment, and, with the permission of His Honour THE PRESIDENT, I will move an amendment which, as far as sections 12 and 15 of the Tenancy Act are concerned, will meet the object of his amendment. In section 20 of this Bill we have provided that the fees payable to the Collector under sections 15 and 18 of the Bengal Tenancy Act may be paid to the Registrar of Mutations when notice is given under section 6, and such payment shall be held to be payment to the Collector. I must confess that we omitted to notice that although we are legislating in a way that will prevent the payment of double fees, the wording of the section still leaves it obligatory on the tenant to give notice to two separate officials, and I think therefore we ought to add to section 20 the words 'and such notice to the Sub-Registrar shall be held to be a notice to the Collector under sections 15 and 18 of the Bengal Tenancy Act.' If the Hon'ble mover of the amendment will accept my proposal and withdraw his amendment, I will undertake, with the permission of His Honour, to move to add these words at the end of section 20, which will, I think, meet the hon'ble members' views."

The Hon'ble BABU SURENDRANATH BANERJEE having accepted this suggestion and withdrawn his amendment—

The Hon'ble Mr. GHOSE moved that in line 9 of section 6 the word "six" be substituted for the word "four" between the word "within" and the word "months." He said:—

"The idea is this, that as regards the mutation of names in proprietary rights, the time allowed is six months, and as regards this new measure calling upon the raiyats to register transfers of their rights, I think the same term ought to be given to them as is now allowed to landlords under the Act of 1876. Although this is not a matter of any great importance, it is a matter which has been noticed by every one of the Associations. The Bengal Chamber of Commerce say:—

'The Committee do not understand why in section 4 (which is now section 6) the reference is to section 23 of the Registration Act limiting the time for report to Sub-Registrars of the acquisition of proprietary right to four months, when such a report is equivalent to an application for mutation of names under section 42 of Act VII of 1876. They would represent that the time should not be reduced to four months, but that the precedent of the Act of 1876 is the more correct and more just to follow.'

"I submit that though transfers of proprietary rights are removed from this Bill, still it holds good as to tenant rights. Raiyats are engaged in the cultivation of their fields, and it must be sometimes hard upon them to do a thing which is altogether novel to them, and it will take them sometime before they get accustomed to it. I therefore think it will be more reasonable to allow the same period, namely six months, as is allowed to landlords for similar registration on their part."

The Hon'ble MR. BUCKLAND said:—"This amendment aims at making this section conform to the period of time prescribed in the Land Registration Act, whereas we have in drafting the section deliberately followed the procedure of the Indian Registration Act of 1887, which has been followed almost entirely throughout this Bill, whereas it has little or nothing to do with the Land Registration Act in the matter of procedure. Therefore, in the matter of giving notices of transfers we have been guided by the time allowed by the Indian Registration Act for the presentation of documents for registration. In Part IV of that Act, sections 23 and 25, the period allowed for the presentation of documents is four months from the date of the execution of the document or of its arrival in India, and if that period is thought sufficient for the large number of documents registered every year under that Act, it is surely enough for tenants to give notice at very short distances of transfers effected by them. We have thought this over very carefully, and have come to the conclusion that there is no reason for altering the term. I must therefore oppose the amendment."

The Hon'ble MAULVI MUHAMMAD YUSUF, KHAN BAHADUR, said:—"I submit that the analogy from the Registration Act does not hold good. The Registration Act aims at one thing, this Bill aims at another. Under the Registration Act four months run from the time of the execution of an instrument, whereas in this Bill time is to run from the date of possession; and under the last proviso of this section, if an instrument has been registered, there need be no notice given at all by the tenant, because that proviso releases parties from the obligation to give notice if an instrument has been registered. No notice is necessary under section 6 of this Bill if the instrument is registered: that section will only come into operation if an instrument has not been presented for registration. The question being thus set free from any analogy to the Registration Act, the analogy of the Land Registration Act should govern, and six months should be allowed from the date of possession for giving notice to the Registrar of Mutations."

The Hon'ble THE PRESIDENT said:—"I wish to point to a mistake in the remarks which have been made in introducing this amendment. The Bengal Chamber of Commerce were quoted as objecting to the old section 4 of the Bill, but that section has gone out altogether and was not identical, as the hon'ble member thought, with new section 6. It was the section in which we proposed to deal with the transfer of proprietary rights. We do not propose to alter the law with regard to such transfers; we propose to make a new law with regard to transfers by tenants, and we give them four months to give notice of such transfers, and the reason for doing so is that four months is the time under the Indian Registration Act. All transfers under sections 15 and 18 must be carried out by deed, and must be presented for registration, and the raiyats know perfectly well that four months is the time for such registration. Surely it will be inconvenient if in a certain class of transfers the deeds have to be presented for registration within four months, and in another class of transfers of a very similar character notice can be given within the extended time of six months. It will be much more convenient if they have one period of four months for both classes of transfers."

The Hon'ble MR. GHOSE said:—"After the explanation which has been given by the Hon'ble THE PRESIDENT, I beg leave to withdraw the amendment."

The Motion was accordingly withdrawn.

The Hon'ble MR. BUCKLAND said:—"I ask permission to move two verbal amendments, the necessity for which has been brought to my notice by the Hon'ble the Advocate-General and the Hon'ble MAULVI MUHAMMAD YUSUF. They relate to certain matters of drafting which the legal members of the Council think necessary. In the revised Bill, in line 10 of sub-section (1) of section 8, after the word 'transfer,' where it first occurs in that line, I beg to move that the words 'or in the case of the death of both parties if their respective representatives admit the transfer' be inserted. The case of the death of either party is provided for in this section; the words I propose to insert will provide for the case of the death of both the parties. Then, again, after the word 'both' in the same line, I have to move that the words 'transferor or transferee or their respective representatives' be inserted. These are merely verbal amendments to carry out what has always been the intention of the section. Similarly, in line 3 of sub-section (2) of the same section, I move that the words 'or their respective representatives' be inserted after the word 'transferee.' These three little amendments stand on the same footing, and are considered desirable to complete the sense and intention of the section."

The Hon'ble MAULVI MUHAMMAD YUSUF, KHAN BAHADUR, said:—"I am extremely thankful to the Government and to the hon'ble member in charge of the Bill for having accepted the suggestion I have made. I was late in giving notice of my amendments, and I therefore placed the list of my amendments by way of suggestions before the hon'ble member, and I am gratified to find that a large number of my suggestions has met with the approval of the Government."

The Motions were severally put and agreed to.

The Hon'ble MR. BUCKLAND said:—"I have another motion of a similar character to make. I move that in line 13 of section 9, after the words 'one month' the words 'from the date of the last-mentioned notice' be inserted. It is desirable to add these words to show from what date the period of one month should run. And in line 13 of section 15, I move to insert the same words 'from the date of the last-mentioned notice' after the words 'one month.'"

The Hon'ble THE PRESIDENT said:—"I will only add that we are indebted for these amendments to the careful examination of the Bill made by the Hon'ble MAULVI MUHAMMAD YUSUF, whose suggestions have been approved by our Legal Advisers."

The Motions were severally put and agreed to.

The Hon'ble BABU SURENDRANATH BANERJEE moved that in the proviso to section 11 for the words "exempt by law" the words "exempt by notification issued by the Government and persons exempt by the custom of the country" be substituted. He said:—

"This is a very small amendment. It is in the nature of a verbal amendment, and does not involve any question of principle. Persons are exempted from attendance at Courts either by a notification specially issued by the Government on that behalf, or according to the custom of the country. Rajas and Maharajas and the like are exempted by notification issued by Government; zannana ladies are exempt by the custom of the country. The amendment seeks to state in clear and distinct terms the grounds of exemption."

The Hon'ble MR. BUCKLAND said:—"If the hon'ble member will look at the margin of section 11, he will find there a reference to section 33 of the Indian Registration Act, and if he will compare section 11 of our Bill with that section, he will find that we have adopted the exact wording of the Registration Act. We have adopted to a very considerable extent the procedure of the Registration Act, and we saw no reason to depart from it in this particular. I am not aware of any objection being taken to the working of that particular section of the Registration Act, and I see no reason to alter the wording. I must therefore oppose the amendment."

The Hon'ble SIR GRIFFITH EVANS said:—"The wording of this section as it has been adopted from the Indian Registration Act, is absolutely correct. The exemption from attendance at Courts is given not by the custom of the country, but by the Civil Procedure Code, sections 640 and 641. So the exemption is given by law. And in the case of individuals it is the same; special exemptions are made by Local Governments under sanction of the law. There is therefore no necessity for this amendment."

The Motion was, by leave, withdrawn.

The Hon'ble MR. BUCKLAND said:—"I have another amendment to propose of exactly the same nature as those which have already been made. I move that in line 4 of section 14, after the word 'transferee' the words 'or in the case of the death of either if his representative' be inserted."

The Motion was put and agreed to.

The Hon'ble MR. BUCKLAND said:—"I will now ask the Council to add a few words in section 15, which my hon'ble friend the Advocate-General has brought to my notice as being desirable. I move that in line 19 of section 15, after the words 'Registrar of Mutations shall' the words 'if the other provisions of the Act are complied with' be inserted. The object of this amendment is to make it clear that section 15 is not meant to override in any way the rest of the Act. It had escaped my notice that these words were necessary, but on the advice of the learned Advocate-General the Government is quite prepared to accept the amendment, and I trust it will also meet with the approval of the Council."

The Motion was put and agreed to.

The Hon'ble MR. BEIGHTON said:—"I have already explained to the Council the reasons for which I wish to move an addition to section 20 of the Bill in lieu of the amendment proposed by the Hon'ble BABU SURENDRANATH BANERJEE in section 6, and which he withdrew on my suggesting the amendment which I now move. It was a matter which escaped the notice of the Select Committee, but the omission was discovered almost simultaneously by the Hon'ble THE PRE-IDENT and myself. I therefore now formally move that at the end of section 20 the following words be added:—

'and such notice to the Registrar of Mutations shall be held to be a notice to the Collector under sections 15 and 18 of the Bengal Tenancy Act.'

"I must ask the Council to notice that these sections deal only with permanent tenures and to tenures held at fixed rates, and do not cover the whole ground of section 6 of the Bill."

The Motion was put and agreed to.

The Hon'ble MR. BUCKLAND said:—"I will now ask the Council to look carefully to the proviso to section 24 of the Bill, which runs thus:—

'Provided that no person shall be fined under this section who at any time prior to the institution of proceedings thereunder has given notice under section 6.'

"I alluded to this proviso this morning as being intended to give a tenant who had omitted to give notice a means of escaping the penalty; he can come forward before the institution of proceedings and confess that he has not given notice. It has been brought to our notice that a proviso to a similar effect should be added to section 25, which is the section that penalises a landlord who, under section 5, is required to file a statement and does not do so. It has been brought to our notice that we ought to allow a landlord the same right of coming forward at any time before proceedings have been instituted against him, and by filing the statement escape the penalty. The Government are quite prepared to go to that length and to give landlords the same privilege of escaping penalty as is afforded in the proviso to section 24 to tenants. But, even more than that. We are quite prepared, in dealing with the proviso in section 24, to insert words which would give a tenant a further

opportunity than is given in that proviso for escaping the penalty to which he is liable. We propose to introduce the words 'or in the discretion of the Collector at any time after such institution.' The proviso in section 24 gives tenants the opportunity of escaping a penalty by coming forward before the institution of proceedings. We propose to extend that power of escaping the penalty by inserting a few words which will at the discretion of the Collector allow a tenant to escape a penalty even after the institution of proceedings, and we are willing, in extending the proviso to that extent, to make it applicable to both sections. It seems to me that when we do that we make the pressure on the tenant, and in certain cases on the landlord, as light as it can be made compatible with the application of some pressure. I do not see how we can go further without whittling away the whole of the pressure, except such as is of an automatic character. Therefore I move that the proviso to section 24 be struck out, and that at the end of section 25 the following proviso be inserted:—

'Provided that no person shall be fined under this or the last preceding section who at any time prior to the institution of proceedings thereunder, or in the discretion of the Collector at any time after such institution of such proceedings, has filed the statement required by section 5 or given the notice required by section 6.'

"I am not prepared to relax the pressure upon the landlord or upon the tenant any more than this."

The Hon'ble SIR GRIFFITH EVANS said:—"The object of this amendment is shortly this: There are several amendments connected with these sections on the agenda, but I only refer to them for the purpose of explanation. One of those amendments relating to section 24, which relates to tenants, has for its object that no fine should be inflicted until notice to comply with the provisions of section 6 has been served upon the raiyats. But it should be remembered that it will be impossible to know whether the raiyat has complied with the provisions of that section or not, because in 99 cases out of 100 nobody knows except himself and his transferee whether he has made a transfer of his tenancy or not, until in the course of some proceedings connected with the tenancy it transpires that that has been done. Moreover, it will be exceedingly difficult in practice to serve landlords with these notices, and the same remark which applies with regard to landlords applies to small tenure-holders. It has been thought that we might also give a discretion to the Collector, when he institutes a prosecution, to dispense with the imposition of a fine when the statement has been filed or the notice given. Considering that the object of the fine is to put pressure upon the landlord or tenant, as the case may be, that what is wanted is in the case of the landlord to get the return, and in the case of the tenant what is wanted is for him to give the notice, there is no intention to inflict a fine when the object of the law has been complied with. It is necessary to put some pressure on raiyats beyond the automatic pressure. As has been pointed out, the disabilities under the automatic sections will be two-fold. First, we say to the landlord-raiyat, you shall not be allowed to sue for rent until you have given notice, so that the landlord-raiyat will not be able to recover or get a decree against his under-tenants. Next, we say to the ordinary occupancy raiyat you shall not give evidence of your right of occupancy until you have given notice; but there are many cases in which tenants would not be much affected by this pressure, because, after the *khatian* and record of rights, there will not be much room for doubt. No doubt in the case of occupancy raiyats, who are at variance with the landlord, and those who have under-tenants, the automatic pressure would apply to a certain extent, but in all other cases, which will probably be the majority, the pressure would not be felt. There was therefore no other pressure except the power of fining. But I am exceedingly anxious that we should not harass the raiyats, because our attempts to benefit them have not always succeeded. In this case we desire that it should be understood, and appear on the face of the law, that the intention is to provide a means of threatened pressure, and that it is not desirable that punishment should be enforced except where it is absolutely necessary, and to show those concerned that there is a means of enforcing compliance with the law, if they will not otherwise comply with it. We do not want to enforce the penalty, but we want to have the power to tell them—you must do this or you will be fined. And that is what

His Honour THE PRESIDENT meant when he said that the amendment proposed by the hon'ble member in charge of the Bill should be first considered, so that hon'ble members, who have given notice of other amendments, might consider whether they would not be satisfied with what is proposed to be done and withdraw their amendments. That was a matter which would come on afterwards. The motion now was the acceptance of the Hon'ble MR. BUCKLAND's amendment."

The Hon'ble MAULVI MUHAMMAD YUSUF, KHAN BAHADUR, said:—"In this instance also I am thankful to the Government for having accepted my suggestion, the reasons for which have been so fully stated by the hon'ble mover of the amendment. But there is one reason which also weighed with me, namely, that the object is to secure registration and not to secure a conviction for non-compliance with the provisions of the law. When the alternatives are registration or prosecution with certainty of conviction, tenants will no doubt accept registration, and thus this amendment will promote the object which this Bill has in view, viz., the registration of tenures."

The Hon'ble MR. GHOSE said:—"It seems to me that the amendment proposed by the hon'ble member in charge of the Bill is probably sufficient to meet the views of those hon'ble members who think the Bill is defective in this respect as far as section 24 is concerned. There may be some difficulty in knowing what transactions have taken place between raiyats, and as the learned Advocate-General observed they may only transpire in the course of some other proceedings long afterwards. But I venture to think that section 25 stands on a different footing. The only notice the landlord is supposed to receive is by a notification in the Calcutta Gazette which is referred to in section 5 of the Bill, and, as pointed out by the Hon'ble the Advocate-General, there are many landlords of various degrees, including small tenure-holders and others, who do not read the Calcutta Gazette very assiduously; therefore I think that in the case of zamindars who are required to submit returns of changes in their estates, some notice should be given to them personally, rather than that the law should provide that a notification in the Calcutta Gazette is sufficient for the purpose of imposing a penalty. In connection with this amendment I would ask the Government to consider whether, in the case of landlords, a mere notification in the Calcutta Gazette ought to be held to be sufficient for the purpose of imposing a penalty for non-compliance with an order of which the landlords would be wholly ignorant."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"I am very grateful to the hon'ble member for introducing this amendment. It takes the matter a stage further; but I am not prepared to abandon the amendment of which I have given notice. I would appeal to him to look at the matter from the point of view I desire him to look at it. The Hon'ble the Advocate-General has asked how are we to know whether a tenant has made a transfer or not. I am not prepared to accept that argument, because, preparatory to the institution of proceedings, the Collector must know that notice has not been given. If the Collector institutes proceedings against the tenant, it must be on the basis of his knowledge that notice has not been given by the tenant. If he knows that the tenant has not given notice, would it not be the simplest thing for the Collector to serve notice on him to comply with the provisions of section 6, and then, if the tenant omitted to comply with the requisition, there would be time enough to prosecute him. With reference to landlords, so far as the provisions of the Local Self-Government Act are concerned, I understand that notice is given by beat of drum in the locality, but a similar concession is not shown to the landlord under the provisions of this Bill. This is a new measure, and it ought to be worked in such a manner as not to operate with severity on raiyats and landlords. I would therefore ask the hon'ble member to reconsider the matter from the point of view to which I have referred."

The Hon'ble MR. BEIGHTON said:—"The arguments of the Hon'ble MR. GHOSE and of the Hon'ble BABU SURENDRANATH BANERJEE would, it appear to me, if accepted by the Council, be absolutely destructive of

the Bill. The whole principle of the Bill is that the initiative should be taken by the raiyat and not by the Collector. But the hon'ble members want that the only real penalty imposed by the Bill should not be put into force until notice to the raiyat has emanated from the Collector. In that case no raiyat will ever come forward to give notice of any mutation until he is aware that he is about to be fined for not doing so. Such a provision will, I think, absolutely stultify the whole object of the Bill, for it is only in an infinitesimal number of cases that the Collector can possibly become aware of the transfer of any holding or part of a holding. With regard to the observations which fell from the Hon'ble Mr. GHOSE as to the ignorance of zamindars as to notifications which appear in the Calcutta Gazette, I must remind the hon'ble member that ignorance of the law is never held to be an excuse for non-compliance with its provisions, and it would be altogether subversive of any system of law if it were so held. But the hon'ble member knows as well as I do that in practice no injustice is really perpetrated. He must be familiar, for instance, with the vast number of penalties for technical breaches of the law which have been imposed by recent legislation in England under the Corrupt Practices Act for the election of members of Parliament and members of Municipal Corporations. It is impossible for any human being to be cognizant of all the complex details which modern ingenuity has devised in order to protect the purity of Local administration, and these are constantly being violated by candidates who have not the least idea they are doing anything wrong. But what is the result? The hon'ble member must have seen reports in English newspapers which show how leniently such cases are dealt with in the Courts. In such cases of innocent transgression, either the offender is exempted from any penalty or a merely nominal fine is imposed. Similarly, if any case of hardship should arise under this section, I have no doubt that the Magistrate would take into consideration the fact that it was virtually impossible that a petty landlord could have heard of the notification in the Calcutta Gazette, and would impose a nominal fine. I trust the hon'ble member will see that the motion which the hon'ble member in charge of the Bill now proposes is really quite sufficient to meet all that can be expected from the Government."

The Hon'ble THE PRESIDENT said:—"I am sorry to perceive that the speech of the Hon'ble the Advocate-General has not had the effect which I expected it would, but perhaps the additional weight of the remarks which fell from the Hon'ble the Legal Remembrancer may have carried conviction. I was surprised to find on the agenda the amendment No. 8, to the effect that 'no person should be fined under section 24 except after notice served upon him to comply with the provisions of section 16,' because it is to my mind absolutely destructive of one of the important principles of the Bill. It will be perfectly fatal to the scheme if, in addition to the small automatic pressure provided by the preceding clause, no penalty is to accrue until the Collector has sent a notice warning the raiyat that he has failed to give notice of mutation. And with regard to zamindars, I would remind hon'ble members how numerous they are and how difficult it would be to issue notice to all of them. Time after time the Legislature has attempted to find means to reach them, but we know that the efforts of the Legislature have generally been a failure, and we should not succeed in having notice served upon everybody. I ask hon'ble members to accept this view and to trust to the discretion we place in the Collector. We are drawing special attention to the fact that defaulters are not expected to be fined in every case. I think, looking at it as reasonable men, we ought to be satisfied that the provision is one which in all probability will meet the case as far as any legislative procedure can meet the case of future events which never actually accord with our anticipations."

°.

The Motions were put and agreed to.

The Hon'ble BABU SURENDRANATH BANERJEE said:—"After what has fallen from Your Honour, it would have been a matter of very great gratification to me if I found it consistent with my duty to withdraw both the amendments of which

I have given notice, but I feel it incumbent on me to move first that the following further proviso be added to section 24:—

‘Provided, further, that no person shall be fined under this section except after he has been served with a notice to comply with the provisions of section 6.’

“It has been observed by the Hon’ble THE LEGAL REMEMBRANCER that ignorance of law is no excuse, but in applying this principle to this country, you must take into consideration the condition of the people, and especially the position of the agricultural population. They live in little hamlets of their own—in a little world of their own—and in utter ignorance of what is taking place in the world outside and in this Council. They do not know what their legal obligations are, and it would be cruel to punish them for an offence which is the creation of law. What I contend for is that they should be allowed the opportunity of complying with the law before they are prosecuted, or, in other words, a notice should be served upon them, before they are prosecuted. I have heard it stated that we ought to put some sort of pressure upon them. I think this notice will serve as a sort of pressure, and in the course of time they will become aware of their duty under the law.”

The Hon’ble Mr. BUCKLAND said:—“After the lengthened argument which has taken place upon the motion which I put before the Council, there is really not much to say. I entirely object to the principle which this amendment tries to incorporate into the Bill, namely, that when a man has neglected his duty and has rendered himself liable to punishment, he has to be given notice before he can be punished. If that principle is to be adopted, we shall never get any notices of mutations except after the service of such notice. An attempt to introduce such a principle was made the other day in connection with another measure, and it was successfully resisted. I therefore hope we shall not accept this amendment, but retain what I consider ample provision for allowing innocent people to escape the penalty.”

The Hon’ble SIR GRIFFITH EVANS said:—“I have one word more to say in connection with this matter. These raiyats, as we know, will not do anything new unless there is pressure. It is a matter of history what occurred when an attempt was made to enforce an exchange of *pottahs* and *kabuliyats*. The Regulation stood for fifty years uncomplished and was then repealed. We know perfectly well and we sympathise with the strong feeling they have against any innovation. It is inconvenient for a raiyat to leave his work; it is inconvenient for him to go near any of these offices at all, and that for various reasons: he will not do it without real pressure being put upon him. It is clear that we are not able to serve separate notices upon millions of raiyats, and yet the proposal is made to tell the raiyats that if they are not affected by the automatic pressure provided in the Bill, there will be no pressure put upon them, and there is no reason for them to give notice of mutations; it will be time enough, they will be told, for you to go when you receive an order from the Collector announcing to you that a prosecution is about to be instituted against you. To accept this amendment will be as much as to say that this attempt to enforce registration of mutations is to be abandoned.”

The Hon’ble MAULVI MUHAMMAD YUSUF, KHAN BAHADUR, said:—“After all that has been said and done in connection with this subject in Council to-day, I submit that this amendment ought to be rejected. What is reasonable and proper in connection with this amendment has already been provided in the amendment to section 24. The gist of the present amendment is that there should be notice before conviction; but that is already provided for in a much better form in the amendment which has been adopted in connection with section 24; so that the Collector is authorised, even after the institution of proceedings, to refrain from imposing a fine: the summons gives the tenant notice of his default: he can cure the default by complying with the law even after receiving the summons; if he does not care to cure his default, he must be fined. What further notice should be given to him before the imposition of a fine I fail to comprehend: in the summons with which he has been served, he has already got a notice that he has been in default. After having received the

summons, knowing that he has to receive no further notice, the defaulter will not assume a defiant attitude, but on the other hand he will be repentant, and he will rather hasten to comply with the law than run the risk of a conviction in the prosecution. But if he knows that a further notice would be necessary before a fine is imposed in accordance with the amendment under consideration, then he may simply sit quiet and do nothing to cure his default. Without this amendment, he will try his best not to remain any longer in default: with the amendment he will persist in his default. Only two alternatives should be before the tenant, viz., action on his part to cure his default or conviction; this amendment unwisely gives him a third alternative."

The Hon'ble MR. LYALL said:—"I venture to think that the appeal *ad misericordiam* has no real weight. All who know the mufassal well, as several hon'ble members present can claim to do, know how much the common people talk about *Mokudummas*, Courts, Thanas, Munsifis and the like. Your Honour has received repeated petitions upon any attempt to close a Munsifi or a Thana, and when a new registration office is opened, all the country round about know why it is opened; it will be talked about in the village, and will be a matter of common rumour. Therefore there can be no fear that the raiyats will not know why the new sub-registration offices are established and for what purpose they have to go to them."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"Having seen that the sense of the meeting is against the amendment, I beg leave to withdraw it."

The Motion was, by leave, withdrawn.

The Hon'ble BABU SURENDRANATH BANERJEE moved that the following proviso be added to section 25:—

'Provided that no person shall be fined under this section except after he has been served with a notice to comply with the provisions of section five; the provisions of the Civil Procedure Code in respect of the service of notice shall apply to the service of notice in such a case.'

He said:—"Section 25 provides that a notification is to be issued in the *Calcutta Gazette*, and on the issue of such a notification zamindars have to give notice of every change of tenancy which occur in their estates, and if they fail they are to be prosecuted and punished. I think this is a hard measure to mete out to the zamindars. I should like to know how many zamindars read the *Gazette*. I should like to know how many who are not zamindars wade through the pages of the *Gazette*. An absentee landlord may be ignorant of a general notification issued in the columns of the *Calcutta Gazette*. He may thus be punished through no fault of his. If a personal notice were issued upon him, he would have no excuse. I have referred to the Local Self-Government Act under which zamindars have to submit certain returns, and in respect of those returns notice is given. At any rate some provision of the same kind ought, I submit, to be made in this Bill."

The Hon'ble MR. BUCKLAND said:—"The hon'ble member is very sanguine if he thinks that a mere notice to the zamindar will have the effect of making the Act more acceptable to him. Most likely the notice will be treated in the way that other notices are treated. I believe the arguments for and against this motion have been practically exhausted. I shall therefore only repeat that the Government is distinctly opposed to this notice being required."

The Hon'ble MR. GHOSE said:—"I desire to support this amendment. I have tried to make my position clear. I tried to make myself understood that while I thought the amendment of the hon'ble member for the Corporation in regard to section 24 is not really necessary, and while I was not prepared to go as far as he proposed with regard to notice being served upon a raiyat calling upon him to give notice of a transfer effected by him, I tried to distinguish between the two cases—the case of the raiyat who makes the transfer, and the case of the zamindar who is not a party to

the transaction, but who nevertheless may be required by a notification in the Calcutta Gazette to make a return, and especially in the case of those zamindars who do not know English or whose amlah do not know English. The Hon'ble the Legal Remembrancer charged me with endeavouring to mislead the Council by pleading ignorance on the part of zamindars, and he reminded me that ignorance of the law is no excuse. I beg to assure him that nothing was further from my intention than to plead ignorance of the law on behalf of any one. But here we are not sitting in judgment over any zamindar; we are legislating; we are providing the machinery for the working of this Act; and as legislators we ought to take care that adequate provision is made for the purpose of bringing these new obligations to the knowledge of the zamindars before they are dealt with as offenders under this law; and I threw it out as a suggestion that a notification in the Calcutta Gazette is not sufficient in my judgment, and I think that some proceeding might be taken with little or no trouble to the Government, but with great advantage to those who will be liable to punishment for non-compliance with a requisition of which they had never heard. And, following the analogy of the Road Cess Act, I think nothing would be easier than by beat of drum to make a proclamation, so that the fact may be made known; and if, after being made acquainted with his new obligations under the law, a zamindar still persists in disregarding the obligation, I can see no objection to his being punished. But I thought then, and I think so still, that some more effectual notice than a mere notification in the Gazette might be given with great advantage. I challenge the legal advisers of the Government to point to a single instance in previous legislation on a similar subject requiring returns from zamindars, where a notification in the Calcutta Gazette has been deemed sufficient, and I shall be very much surprised if they are able to find any instance where it is not provided that new obligations of this character imposed upon zamindars should be brought to their knowledge by service of notice or by proclamation."

The Hon'ble SIR GRIFFITH EVANS said:—"There is a proviso to section 14 of the Road Cess Act which provides for the making of a proclamation which I think will cost the Government very little trouble, and which I think will meet the views of those who claim hardship to the zamindar getting no information except through the Calcutta Gazette. I propose to insert similar words as sub-section (2) of section 5."

The Motion was, by leave, withdrawn.

The Hon'ble SIR GRIFFITH EVANS then moved by leave of the Council to insert the following as sub-section (2) to section 5:—

'(2) The Collector of the district shall cause such notification to be published by affixing a copy thereof in some conspicuous place in the office of such Collector, in every Civil Court, in every police-station, and in the office of every Sub-divisional Officer within the district, and in any other manner which the Local Government may from time to time direct.'

The Motion was put and agreed to.

The Hon'ble MR. BUCKLAND said:—"I beg leave to move a verbal amendment in sections 24 and 25. In those sections, and in the proviso which was added to section 25 on my motion, the word 'Collector' is used, but in other parts of the Bill the expression 'Collector of the District' is used. My motion therefore is, that in sections 24 and 25 and in the proviso to section 25 the words 'Collector of the District' be substituted for the word 'Collector' wherever it occurs."

The Motion was put and agreed to.

The Hon'ble MR. GHOSE by leave of the Council withdrew the Motion, of which he had given notice, that section 25 of the Bill be omitted.

The Hon'ble BARU SURENDRANATH BANERJEE moved that in line 6 of section 29, the words beginning with "and the amounts" to the end of the section be omitted, and that the following be substituted in their place:—

‘and allot the cost of such survey in the following proportions:—

‘One-fourth to be borne by the Government, five-sixteenths by the raiyats, including tenants, rent-free owners and occupiers, and seven-sixteenths by the zamindars; and the Local Government may specify the date from which the expenses aforesaid shall be recovered, and also the rate per acre based upon the aforesaid proportions to be paid by the said proprietors, landlords, tenants and rent-free owners and occupiers.’

The Hon'ble MR. LYALL rose to order. He said:—“I beg to ask the Hon'ble the President whether, under the provisions of section 19 of the Indian Councils Act, this Motion can be made ‘without the previous sanction of the Governor-General in Council?’”

The Hon'ble THE PRESIDENT said:—“I think that the provision to which the Hon'ble MR. LYALL has referred does not apply to the Motion before the Council, and that the amendment is one which it is in the power of the hon'ble member to propose.”

The Hon'ble BABU SURENDRANATH BANERJEE continued:—“It was made a matter of complaint when the Bill was referred to the Select Committee that an allotment of the costs was not specifically made. The Secretary of State has ordered that  $\frac{1}{4}$ th of the cost of the Bihar survey should be borne by the Government,  $\frac{5}{16}$ ths by the raiyats and  $\frac{7}{16}$ ths by the zamindars. The object of this amendment is to state specifically the proportion of the cost which each party should bear, and in proposing this amendment I have followed the recommendations of the Secretary of State. It is a matter of the greatest importance that the question of the proportions in which the cost of the survey and settlement should be paid should not be left undefined. These are my reasons for bringing forward this amendment.”

The Hon'ble MR. BUCKLAND said:—“The argument of the hon'ble member would have some validity if this were an Act applicable to the Bihar Survey and Settlement only and not to any other survey and settlement. The Secretary of State's Despatch, in which he laid down the proportions to be borne by the several parties concerned, is perfectly well known, but that Despatch relates only to the case of the Bihar Survey, and it is not likely that the injunctions contained in that Despatch will be disobeyed; therefore, in so far as this amendment refers to the Bihar Survey, we can give the hon'ble member an assurance that the apportionment laid down in the Secretary of State's Despatch will be observed. But it is quite impossible to say now that that proportion will be maintained in the case of every other survey, and it is unreasonable to make such a request. The effect of adopting this amendment would be that in every survey and settlement which may be hereafter made, the Government should undertake to pay a quarter of the bill. That would be quite unprecedented, and therefore the motion as it stands must, I think, be decisively opposed; as far as the Bihar Survey is concerned, it is not likely that the Secretary of State's orders will be overlooked.”

The Hon'ble MR. GHOSE said:—“I think it will save time if I were to support my hon'ble friend's amendment. I think it only right that the proportions to be borne by the three parties should be embodied in the law, and that it should not be left entirely vague and indeterminate as to what proportion should be borne by the State, or whether any proportion should be borne by the Government, and what proportion should be borne by the raiyats and by the zamindars respectively. There is absolute unanimity of opinion on this subject in the reports received from all the public bodies who have been consulted on the subject of this Bill. I will read to the Council a short extract from the letter of the Bengal Chamber of Commerce on this point. They say:—

‘The proportion in which survey expenditure incurred in any district is to be divided between the State, landlords and tenants is spoken of, but is not made clear. It is only provided that the distribution of the cost shall be made under certain rules to be framed, as the Committee would recommend, by the Local Government, but the proportion is not stated. The Committee comment upon this omission. The proportion has been fixed in Bihar and

has received the sanction of the Secretary of State, and they can perceive no objection to its being repeated in this section.

"That is exactly what my friend's amendment proposes to do, instead of leaving it to Your Honour's successor on the recommendation of the Collector of the district, who may recommend that the whole be thrown on the zamindar, or if he is a *pro* zamindar, he may recommend that the whole expense be borne by the raiyat; or he may recommend that no portion of the expense should be borne by the Government. I submit that the recommendation of so high an authority as the Bengal Chamber of Commerce ought to be adopted."

The Hon'ble Mr. BEIGHTON said:—"The hon'ble member has failed to notice that in the interests both of the raiyats and the zamindars it is better that the proportions in which the expense should be borne should not be stereotyped in the Bill. It often happens that a survey is necessary on behalf of one of the parties only. A survey, for instance, may be ordered by the Collector in a case where there is a combination among tenants not to pay rent. Is it fair in such a case that the landlord should be saddled with even one-fourth of the cost? Or take a case where a landlord has applied for a survey because the accounts of his property are in a state of confusion. Is it fair that in such cases as these one party or the other should pay the precise proportion of cost which has been decided in the case of the Bihar Survey? I think it would not be at all to the interest of either raiyats or zamindars that the proportions of cost to be borne by them respectively should be irrevocably fixed, whatever may be the circumstances of each case. Then again let me draw the attention of the Council to the case provided for in section 101 (1) (b) of the Bengal Tenancy Act where the Local Government may order a survey in order to avert a serious dispute between the tenants and their landlords. Does the hon'ble member seriously contend that in such a case as this, without any reference to the merits of the case or the party at default, the zamindar is to pay 7 annas, the tenant 5 and the Government 4 annas? One would imagine there was some particular virtue in the combination 7, 5 and 4 which the hon'ble member wishes to perpetuate. I cannot but hope that the Council will see that it is essential to leave it to the Government to decide under the circumstances of each particular case how in fairness to all parties the expense ought to be borne."

The Hon'ble SIR GRIFFITH EVANS said:—"Leave, I take it, has been obtained from the Government of India to bring in this Bill, because it affects to a certain extent the Bengal Tenancy Act, which was passed by the Governor General in Council. Section 114 of that Act provides that expenses incurred in carrying out the provisions of this Chapter in any local area, or such part of those expenses as the Local Government may direct, shall be defrayed by the landlords and tenants of land in that local area in such proportions as the Local Government, having regard to all the circumstances of each case, may determine.

"That is the rule laid down by the Bengal Tenancy Act, and it is matter for consideration whether, the Government of India not having given leave for a new departure of the kind here proposed, which would practically operate as a repeal of section 114 of the Bengal Tenancy Act, the result would not be to jeopardise the whole Bill altogether. I cannot say that the passing of this amendment is not within the competency of the Council, but I think it is hardly open to us at this stage, after it was submitted to the Government of India in a particular form, to make a new departure in the way now proposed."

The Hon'ble BABU SURENDRANATH BANERJEE in reply said:—"It would savour almost of impertinence if I were to argue a point of law with the learned Advocate-General and the learned Legal Remembrancer, but I beg leave respectfully to submit that we cannot enact any law calculated to supersede the provisions of the Bengal Tenancy Act. We have not the competency, even though we had the inclination, to do so. All that I contend for is that all cadastral surveys must be governed by the provisions of this Act; therefore the remarks of the learned Advocate-General, so far as I can see, are irrelevant to the issue before us. I say this with great deference, but I am bound to put this view before the Council."

The Hon'ble SIR GRIFFITH EVANS explained :—"The expenses which will be incurred under this Act are expenses for maintaining Records of Rights made by virtue of the Bengal Tenancy Act. We are dealing with the expenses of a Survey and Settlement of Rights which is to be done not under the authority of this Act, but under the authority of the Bengal Tenancy Act."

The Hon'ble THE PRESIDENT said :—"I think the fact which has been mentioned by the Hon'ble MR. GHOSE, namely, the great unanimity evinced by the public bodies who have commented upon this provision of the Bill, only shows how their thoughts have been concentrated on the one leading case of North Bihar, while there are many other classes of cases which have to be borne in mind by those who have to work the Bill. The Hon'ble the Legal Remembrancer has pointed out one such class of cases to which the amendments both of the Hon'ble BABU SURENDRANATH BANERJEE and of the Hon'ble MR. GHOSE would not apply, viz., where the proprietor applies for a cadastral survey on account of the lawlessness and contumacy of the raiyats, or on account of the confusion into which a particular estate may have fallen. There is another class in which the Magistrate applies for a settlement-survey as the only means of settling long-pending and aggravated quarrels between proprietors and tenants. In such a case it would be quite unreasonable to apply the particular ratios applied by the Secretary of State in the case of the Bihar Survey. That case being the leading case has caught the public eye, and especially the eye of the Bengal Chamber of Commerce, which naturally has no experience of the many different kinds of surveys under the Tenancy Act. Where a settlement-survey is applied for on account of disputes between landlords and tenants, it would not be reasonable that the Government should pay any portion of the cost. A great amount of survey work is done under the Tenancy Act in Government estates and in Wards' estates; and the advantage derived from such surveys is so great that generally the whole of the cost is laid upon the estate, and nothing at all falls upon the raiyats. But if the raiyats are found to be extremely unreasonable; if they prolong the work and increase the expenditure by their recalcitrancy, the Government may well say to them, 'you must bear a portion of the cost.' These facts show the importance of adhering to the principle which the Hon'ble the Advocate-General has supported, that it is absolutely necessary to have a free hand in each particular case. The case of the North Bihar Survey would by no means serve as a precedent in any other classes of cases. I am hopeful that after hearing this explanation the hon'ble members will be content to withdraw their amendments, because it will be seen that they are quite impracticable, and would produce results which are not anticipated by themselves."

The Motion was put and negatived.

The Hon'ble MR. GHOSE, by leave of the Council, withdrew the Motion of which he had given notice, that in section 29, the words within brackets from "in such proportion" to "determine" be omitted, and that the following words be substituted:—

'In the proportion of 7 annas by the proprietors and landlords, and 5 annas by the tenants.'

The Hon'ble BABU SURENDRANATH BANERJEE moved that the following proviso be added to section 29 :—

'Provided that pending the final determination of the total expenses which have been incurred in making a survey, the accounts shall be published in the local gazette, and the parties liable to contribute towards the expenses shall be allowed the opportunity of submitting their representations in connection therewith.'

He said :—"This amendment is somewhat loosely worded, but if the principle is accepted, I should be happy to re-draft it with the assistance of the Council. I maintain that those who contribute towards the cost of the survey have a right to know how their money is spent; and, moreover, I submit that the publication of the accounts will go far to ensure economy. The right

which my amendment seeks to confer upon those who contribute towards the cost of the survey will go still further to promote the same result. I am informed that, in connection with the cadastral survey carried on in the estates of the Maharaja of Tippera, there was a good deal of extravagance. I have heard it stated that boundary stones to demarcate the villages which could be had in the bazar for nine annas a piece were charged for at the rate of nine rupees a piece. I have heard that from a distinguished pleader from Tippera; but, however that may be, I submit that the accounts should be published in order that those who contribute towards the cost of the survey may have an opportunity of submitting any representations they think fit in connection with the matter."

The Hon'ble Mr. BUCKLAND said:—"I regret that I must disappoint the hon'ble member again. It is really impossible to grasp what this demand really amounts to. It is very difficult to carry out these operations, and to bring them to a conclusion. The hon'ble member may rest assured that all that is necessary is done to ensure economy, but it will be a tremendous addition to our labours if it is necessary to publish the bill of charges, and to allow every raiyat to come forward and submit his representations in a formal manner. If we allowed anything of this sort to be done, it would perhaps double and treble the amount of work necessary to carry out these very large survey and settlement operations. I can see no harm—in fact we do it now—in publishing in the *Calcutta Gazette* the Government Resolution regarding the survey which will sufficiently inform the public, and which makes known generally what have been the total charges incurred, and what is the rate of cost per acre; and the expense devolving upon any raiyat can be calculated therefrom. Nothing of real importance is held back, and it is pretty well known beforehand that the expense ought not to amount to more than an average of 8 annas per acre divided among all the parties. We do all we can to keep down the expense, and no good would be gained by allowing the raiyats to contest every small point. Nothing will involve more trouble on all parties concerned than to have every small item of expense disputed, and to have elaborate arguments and discussions. I regard this proposal as altogether unnecessary, and I think my hon'ble friend may trust us to keep down charges as low as possible. I must therefore oppose the amendment."

The Hon'ble MAULVI MUHAMMAD YUSUF, KHAN BAHADUR, said:—"I consider this amendment to be a very reasonable one. It deals with two questions—*first*, the publication of the accounts in the *Calcutta Gazette*, and *secondly*, the opportunity to submit representations. The two points stand on different bases. As regards the first point, I do not see any objection to the amendment. As regards the second point, there might be some objections to allow thousands of persons, whether zamindars or raiyats, to make representations; but when we are going to tax their pockets, then the objection to give them an opportunity to submit their representations does not seem to be very formidable."

The Hon'ble THE PRESIDENT said:—"I think this is an amendment which should not be passed by the Council. It proposes to put the Government in a position which they ought not to be asked to occupy. It will create a new procedure contrary to what exists in similar cases. For instance we carry on embankment work under the Embankment Act, and in many cases we charge proprietors of estates protected by such embankments with the exact cost spent for their maintenance from year to year. Nobody has ever asked that the accounts should be furnished in detail, nor have I ever heard any suggestion that the expenses have been overcharged, or that the charges have been unduly distributed. Moreover, the amendment as it has been drafted will not meet the hon'ble member's wishes, unless the accounts are published in great detail. We do publish the accounts in some detail, and in the next *Calcutta Gazette* the hon'ble member will see the accounts of the survey and settlement work carried on last year show with considerable fullness, and under different heads. That will give as much information as the statistician requires to understand the nature

and cost of the work, and to form a judgment whether the operations have been carried out with an eye to economy or with extravagance. With regard to the instance of excessive charge, which the hon'ble member has given, I am sure that he has stated it as he has heard it from the Pleader of Tippera to whom he referred; but no information has reached me on the subject; and while it is easy to make such assertions, it is impossible to refute them at a moment's notice and without further enquiry. But all that I have heard justifies me in saying that it is presumable that no such extravagance has taken place. It is true that the cost of the survey in Tippera has been more expensive than the average, but there are local causes, such as complicated tenures and conflicting interests, which have made that inevitable. I think the Council will be justified in trusting the Government to take care that economy is observed in carrying out surveys and settlements. We have published our estimate, which is that we desire to work at the average cost of 8 annas per acre. To a certain extent my personal credit is pledged to carry that estimate out, and every nerve of the Government is strained to arrive at that result, and every possible endeavour will be made to make the work of the department economical. I therefore am obliged to say on the part of the Government that I cannot advise the Council to accept this amendment."

The Motion was put and negatived.

The Hon'ble MR. BUCKLAND moved that in section 30 the words "and landlords" be omitted. He said:—

"This is a verbal amendment, the words 'and landlords' having crept in by mistake. We only want to provide that proprietors of estates should pay their share of the expense at the same time as they pay their revenue. The term 'landlords' covers many other persons besides proprietors, and includes raiyats. I therefore propose to strike out the words 'and landlords.'

The Motion was put and agreed to.

The Hon'ble BABU SURENDRANATH BANERJEE moved that in section 30 for the words "together with such instalment of land revenue as the Local Government may direct" the words "to the Collector or such other officer as the Local Government may direct" be substituted. He said:—

"Here the cost of the survey is treated as part and parcel of the land revenue. If a Collector is inclined not to accept the land revenue unless the cost of the survey has been paid, the estate may be sold up. This seems unnecessary, having regard to the fact that arrears of payment under this Act can be recovered as a public demand. My amendment seeks to rectify this defect."

The Hon'ble MR. BUCKLAND said:—"I think the hon'ble member has gone quite out of his way to pick a hole in this section. He is afraid that an amount due from a proprietor under this Act will be regarded as part and parcel of the land revenue, but the very words which have been used show that it is distinct from land revenue. The section says that the amount shall be paid *together with* such instalment of land revenue, so that it is stated as distinctly as possible that it is another thing from an instalment of land revenue. The object of the section is that, whereas proprietors have to pay their land revenue, it should be open to the Government to say that at such *kist* day as the Government may think fit the amount of the survey settlement charges due from the proprietors shall be paid at the same time as an instalment of land revenue, and I think there is no hardship in that. It is a very ordinary sort of provision to make: and we particularly go on in the same section to say that arrears of the survey settlement charges shall be recoverable under the certificate procedure, so that there will be no question of selling up an estate for default in payment of these charges. I think the distinction is as clear as possible, and that the amendment is unnecessary."

The Hon'ble MR. GHOSE said:—"I am not quite convinced that the danger which is apprehended by the hon'ble mover of the amendment is

so entirely without foundation as the hon'ble member in charge of the Bill seems to think. No doubt it is expressly laid down in section 30 that arrears of payment under this section shall be recovered under the certificate procedure, but for my part I fail to see the necessity of coupling the payment of this debt with the payment of any particular *kist* of land revenue. The association of a particular *kist* of land revenue with any other debt may imply that the non-payment of the one will involve the non-receipt of the other, and I should not be surprised if the Collector were to put that interpretation upon it, and then by the operation of the Sunset Law the result apprehended by my hon'ble friend will take place. For my part I have not yet been able to understand, nor has the hon'ble member in charge of the Bill attempted to tell us, what necessity there is for associating the payment of arrears recoverable under the certificate procedure with the payment of land revenue. Why should not the arrears be recoverable, like any other public demand, wholly apart from a *kist* of land revenue? Therefore, there may be the danger of the Collector under this section declining to receive a *kist* of land revenue unless at the same time the arrears due under this Act are paid."

The Hon'ble MR. BUCKLAND said:—"With Your Honour's permission I would explain that the simple object is to provide that the amounts due under this Act shall be paid *at the same time* as the land revenue. It would be for the convenience of all parties that, when the land revenue is being paid in, the proprietors should at the same time pay in these amounts."

The Hon'ble MR. LYALL said:—"I desire to add one word as to the reason why I agreed to this section. Without it there is nothing in this Bill or in the Tenancy Act that makes the payment by a proprietor due. Without fixing some date on which the payment is due, it cannot be recoverable as a public demand. All that I hold to be intended by this section is to fix the date when the payment becomes due; and it was considered that it would be convenient to the proprietor to pay it at the same time as an instalment of revenue. No Collector can refuse to receive land revenue, provided it is paid before sunset of the last day of payment. He cannot refuse to receive it from anybody, whether connected with the estate or otherwise; nor can he refuse any payment, however small in amount, provided it is offered before the latest time of payment. Therefore, the fear which has been expressed by the hon'ble mover of the amendment that the Collector might refuse payment is not a well-grounded one."

The Hon'ble BABU SURENDRANATH BANERJEE said:—"After the discussion which has taken place as to the purport of the section, I beg leave to withdraw my amendment."

The Hon'ble THE PRESIDENT said—"I think the hon'ble member is wise in wishing to withdraw this amendment, because, if there was any danger of misconstruction of the meaning and intention of the section, this discussion will clear it away. Putting it briefly, the real object is to prevent the zamindar from being called upon to pay his share of the cost, except at a time when he has to pay an instalment of land revenue. It is entirely for the convenience of the landlords that the section has been framed."

The Motion was, 'by leave' withdrawn.

The Hon'ble MR. BUCKLAND moved that in section 31 the word "tender" be substituted for the word "receipt." He said—

"This is a mere verbal amendment. The section provides that the amount due from a tenant, &c., shall be paid by him on 'receipt' of the extract from the Record of Rights. Suppose that he will not receive the extract. We propose that he shall be liable to pay the amount due from him, when the extract from the *khatian* is 'tendered' to him. You may take an extract to the raiyat, but you cannot make him receive it; therefore I propose to substitute the word 'tender' for the word 'receipt.'"

The Motion was put and agreed to.

The Hon'ble BABU SURENDRANATH BANERJEE moved that in line 4 of section 34 the words "two months" be substituted for "one month."

The Hon'ble MR. BUCKLAND said:—"The section of the Registration Act upon which this section of the Bill is based is section 72. I do not know whether the hon'ble member has referred to that section, but there he will find that an appeal made from a Sub-Registrar's decision to the Registrar to whom he is subordinate, must be made within thirty days from the date of the order of the subordinate officer, and we have followed that principle. If thirty days have been found sufficient in the Registration Act of 1877, we anticipate that it will be found quite sufficient under this Bill, and I see no reason for extending the time. In a matter of this sort, the best thing is to adopt the precedent of the existing law, of which we are following the procedure as far as we can."

The Motion was put and negatived.

The Hon'ble MR. BUCKLAND said:—"With Your Honour's permission I will ask the Council to accept an amendment of which I have not been able to give notice. I am indebted to my friend the hon'ble member, the Collector of Calcutta, for a suggestion which may be of very considerable importance in the working of the Bill. It is a little section which is taken from section 87 of the Land Registration Act. It will empower the Collector, in cases where he is overwhelmed with appeals under this Act, to appoint an officer who will exercise what is called special appellate powers. Particularly at first there may be a large number of petty appeals, and it may be very undesirable that the time of hard-worked Collectors should be taken up with such cases. He may have an experienced Joint-Magistrate or Deputy Magistrate who could dispose of such appeals under general instructions from the Collector. For these reasons, I move that the following section be inserted after section 34:—

'The Local Government may from time to time vest any offi or other than the Collector of the district with special appellate powers under this Act; and every Officer so vested shall be competent to hear and decide any appeal which the Collector of the district is competent to hear and decide under this Act.'

The Motion was put and agreed to.

The Hon'ble BABU SURENDRANATH BANERJEE moved that in clause (2) of section 35, "section 190" be substituted for "section 192."

The Motion was put and agreed to.

The Hon'ble MR. BUCKLAND moved that the Bill, as settled in Council, be now passed. He said—

"I do not propose to detain the Council at any length. I think we may consider ourselves fortunate that we have got through this debate in four hours. I hope that the Bill will now receive the sanction of the Government of India, and that the Act will be launched under Your Honour's auspices, assume shape and be brought into working order. It is impossible to predict with any certainty what will be the result of the working of this Act, but what we claim to have done is that we have made this effort to redeem the pledge given by the Government that an Act will be passed for the maintenance of a Record of Rights; and we have proceeded on the lines which Your Honour intimated in a general way, so long ago as June 1892, should be followed, namely, that the measure should take the shape of an amplification of Registration Offices. It now remains for the people to co-operate with us, and to come forward and register their transfers, and to accumulate for themselves a body of evidence of their transfers and successions that shall stand them in good stead in the day of litigation. We hope that this measure, which will be ancillary of course to the more important measure of the Tenancy Act, and particularly Chapter X of that Act, will conduce to the peace and order of any district or part of a district to which it is applied, and that it will enhance the value of landed property and conduce to the peace and prosperity of the peasantry of

Bihar and other parts of the country to which it may be applied. I have again to thank my hon'ble colleagues in the Select Committee; I have also to thank the several Public Associations which have sent us valuable reports upon the subject of this Bill, and I have to thank the Council as a whole for the patient hearing which they have accorded me."

The Hon'ble MAULVI MOHAMMAD YUSUF, KHAN BAHADUR, said:—"I will not, at this late hour, detain the Council with any lengthy observations regarding the merits of the Bill as it now stands. I may, however, be allowed to say in connection with the Bill that the attitude of the President towards the non-official members of the Council has been happily one of encouragement and conciliation; and perfect freedom of thought and full liberty of speech have always been conceded to us, although some portions of the debate were well calculated to put patience and temper to severe test. For this we are sincerely thankful to the Government. All questions that have come up for debate and decision have been decided after due deliberation and full and free discussion on their own merits, according to the true convictions and opinions of the members, and the Government has never had recourse to official majority in connection with any question relating to the Bill. This is highly encouraging, and leaves nothing to be desired. Although I would have been glad if many more of the suggestions and amendments which we proposed had been accepted and carried out, still I cannot shut my eyes to the fact that Government has conceded a great deal, and has never refused to adopt such of our suggestions as were deemed by it reasonable and fit to be accepted. The Bill has been conceived and prepared with the honest belief that it would promote the good of the people. Altogether the Bill as it now stands assumes a shape so that it is least open to adverse and hostile criticism: the most objectionable parts have been purged away, and it is impossible to expect that it should assume a more satisfactory appearance. Under these circumstances, I vote that the Bill should be passed into law."

#### THE CALCUTTA PORT ACT, 1890, AMENDMENT BILL.

The Hon'ble MR. RISLEY presented the Report of the Select Committee on the Bill to further amend the Calcutta Port Act, 1890.

The Hon'ble MR. RISLEY also applied to the President to suspend the Rules of Business.

The Hon'ble THE PRESIDENT having declared the Rules suspended—

The Hon'ble MR. RISLEY moved that the Report of the Select Committee be taken into consideration in order to the settlement of the clauses of the Bill. He said:—

"In dealing with this Bill I am fortunate in having very little to say. The only section in which any substantial alteration has been made by the Select Committee is section 15, which, as it originally stood, empowered the Port Commissioners to declare any of their warehouses to be bonded warehouses. It was suggested in Select Committee that, as the Sea Customs Act of 1878 already conferred the power of converting private licensed warehouses into bonded warehouses, the amendment proposed by the Bill, as it was introduced, would have the effect of creating what may be described as a double procedure for doing practically the same thing, and for that reason it was considered better to proceed upon existing lines for converting the warehouses of the Port Commissioners into bonded warehouses within the meaning of the Sea Customs Act, instead of proceeding by independent legislation to empower the Port Commissioners to do what is required. Having regard to the important interests at stake and the somewhat intricate legal questions involved, the Port Commissioners felt that this was a point which required to be determined with the greatest care, and accordingly, with the concurrence of the Select Committee, the sections as redrafted by them were referred to the Hon'ble the Advocate-General, and a slight modification was introduced by him. The form the

sections now take is that of empowering warehouses belonging to the Port Commissioners to be licensed under section 16 of the Sea Customs Act; they would then become bonded warehouses, the provisions of that Act would apply to them, and the chief Customs authority would have full executive powers in the matter. When the question was referred to the Hon'ble the Advocate-General, he held that in order to do that it would be necessary to declare all the warehouses of the Port Commissioners to be private warehouses within the meaning of the Sea Customs Act, and capable of being licensed as bonded warehouses. He also advised that, as the Bill in the form in which it was amended would have the effect, I can hardly say of altering, but at any rate of touching, the Sea Customs Act, it would be necessary to obtain the previous sanction of the Governor-General in Council; this has, therefore, been done, and the necessary sanction has been received. This is really the only substantial alteration which has been made by the Select Committee, the other alterations being merely formal and subsidiary to this one. I have omitted to explain that the section dealing with warrants has been modified to some extent. As it at first stood it was necessary, as we were dealing with an independent enactment, to state the section to which warrants should conform, and to give a statutory form of warrant; but now, having brought all these arrangements within the purview of the Sea Customs Act, we say:—'The warrants delivered under section 96 of the Sea Customs Act shall in the case of the said warehouses be signed by the Commissioners or some person duly authorized by them.'

The Motion was put and agreed to.

The Hon'ble Mr. RISLEY also moved that the clauses of the Bill be considered in the form recommended by the Select Committee.

The Motion was put and agreed to.

The Hon'ble BABU SURENDRANATH BANERJEE moved that in section 4, subsection (2), the words "passengers or" be omitted. He said:—

"Before making any remarks upon this section, I wish it to be understood that I have no desire to stand in the way of the passing of this Bill, which I understand has been introduced at the instance of the Mercantile Community which is so worthily represented in this Council by my hon'ble friend to my left (the Hon'ble Mr. Smyth). I think it is no part of the duty of a Port Trust to make arrangements for the conveyance of passengers. They deal with goods which arrive at, and are exported from, this Port. But apart from this question of principle, I have to observe that if the Bill is to be passed in the form and shape in which it has been laid before us, it will seriously interfere with the operations of the Calcutta Tramways Company, and will entail heavy loss to the Corporation of Calcutta. The Council will remember that last year the Corporation entered into a contract with the Tramways Company which was legalised by this Council. Under the terms of that contract the Company pay a mileage rate to the extent of several thousands of rupees per annum to the Corporation, and they further keep in order the portions of the roads over which the tramway lines are laid. If this section is passed into law, and if the Port Commissioners take advantage of this provision and run tramcars for passengers from Chitpore to Kidderpore, the Tramways Company will have to cease running their cars along that part of their line, which will not only mean loss to the Corporation, but serious inconvenience to the public.

"In this connection may I be permitted to inquire of the hon'ble member in charge of the Bill as to what has become of the little project of law proposed by the Calcutta Corporation to enable them to recover rates upon huts situated on lands belonging to the Port Commissioners? I am told that the Corporation lose about Rs. 20,000 a year for want of such a necessary provision in the law. It is a very urgent matter, and I appeal to the hon'ble member to expedite the settlement of the question, which the longer it is delayed the heavier is the loss which the Corporation of Calcutta have to sustain."

The Hon'ble Mr. RISLEY said:—"I think it will be convenient if I deal first with the matter which the hon'ble member has mentioned last, namely, the question of the assessment of buildings within the Port Commissioners' lands for the purposes of the Calcutta Corporation. I understand that there is a special arrangement for assessing the property of the Port Commissioners by a percentage on the money which was spent on the property, but that does not provide for the assessment in the ordinary way of buildings belonging to persons other than the Port Commissioners, but which stand on their property. There is no question whatever as to the justice of the claim which the Corporation has put forward. It has been submitted to this Government and considered, and a proposal to deal with it by an amendment of the Calcutta Port Act has been submitted to the Government of India. But I must explain that the proposal to deal with the Calcutta Port Act in the way in which it is dealt with in the Bill before the Council dates some time back. The question to which my hon'ble friend refers came in subsequently, and the original proposal having already been reported to the Secretary of State, it was held that a further report would be necessary in order to the introduction of the proposed amendment. In other words, it will not be open to us, under the rules relating to the previous sanction of the Government of India, to bring that question into the Bill now before the Council. It has been reported in the regular course of business, and I believe there is very little question as to the necessary sanction being received, and as soon as sanction is received, the matter will be dealt with in the ordinary way.

"As regards the motion to omit the words 'passengers or' in sub-section (2) of section 4 of the Bill, which amends section 35, sub-section (2), of the Port Act, I must express my extreme regret in adding one more to the series of instances in which the hon'ble member's proposals have been declined during to-day's debate. I see no way of getting over the matter, except that of leaving the thing as it stands; there does not appear to be any means of compromise in the matter. At the same time I think the apprehension which the hon'ble member has expressed, that the Port Commissioners' line will compete with the existing Chitpur Tramway line, in which the Municipal Commissioners are interested, is altogether groundless. What the Mercantile Community wish the Port Commissioners to do—though the Port Commissioners are not specially anxious to do it—is that they should carry passengers merely between the jetties and the docks. Obviously when a merchant's clerk or other employé has to go to the docks to look after consignments of merchandise, it is extremely inconvenient that he should not be able to make use of the Port Commissioners' tramway for the purpose, but I apprehend there is no question whatever of the Port Commissioners carrying general passengers and taking customers away from the Calcutta tramway. In the first place, the provision in the Bill which will authorise the carrying of passengers will not be made use of on the whole of the line connecting Chitpur and Khidderpore, but only on the portion between the jetties and the docks. The Port Commissioners' so-called tramway, which is really a railway, used hitherto solely for carrying goods, runs inside the Port Commissioners' premises, and would, I imagine, offer no attractions to the ordinary passenger. There will, I understand, be no published time-table and no regular passenger trains. The passengers carried will consist of the special class of clerks, sarsars, stevedores, ships' coolies, and others having business at the docks, and I do not think that such small traffic can possibly interfere with the interests of the Calcutta Tramways Company. I may further state that if the Municipal Commissioners will be satisfied with an executive pledge to the effect that the permission to carry passengers will not be used so as to draw business away from the Calcutta Tramway, the Port Commissioners are willing to give such a pledge. Hereafter, when further occasion arises for revising the Port Act in connection with the question of assessment, which has been mentioned, the status of the Port Commissioners' railway will doubtless come under discussion, and full expression will be given to the views of all the parties concerned—the Mercantile Community, the Municipal Commissioners, and the Port Commissioners."

The Hon'ble Mr. GHOSE said:—"I beg to congratulate the hon'ble member on the very satisfactory statement which he has made, and I think my

hon'ble friend the mover of the amendment must be perfectly satisfied with that statement, namely, that steps have been already taken in order to give effect to the proper and just claims of the Corporation, which my hon'ble friend represents here, regarding the assessment of certain property within the Port Commissioners' premises. With regard to the other matter which forms the subject of his amendment regarding the carrying of passengers by the Port Commissioners, it seems to me that after the explanation which has been given, that they will have no fixed time table, and will carry only certain clerks and sarcars and other people connected with the merchandise of the town; that they will have in fact no regular passenger service, I think my hon'ble friend should also be satisfied, and should withdraw his amendment.

"Before resuming my seat I desire to take this opportunity, as this will probably be the last occasion on which I shall have the honour of addressing the Council, of expressing my sense of grateful appreciation of the patient and indulgent hearing which has always been accorded to me, and the kindness and courtesy which I have invariably experienced at the hands of every hon'ble member of the Council. And I trust Sir, that although we have frequently found ourselves in opposition to the views of the majority of hon'ble members, we have never lost sight of the spirit of compromise which ought to animate our debates, and that we have never been wanting in due and proper respect for the opinions of those from whom we have for the time being been compelled to dissent."

The Hon'ble BABU SURENDRANATH BANERJEE in reply said:—"After the explanation which has been given by the hon'ble member in charge of the Bill, and the assurance given by him that it is not in contemplation to use the Port Commissioners' Railway for the purposes of passenger traffic, but only for the convenience of those who are connected with the mercantile business of this Port, I beg leave to withdraw my amendment."

The Motion was, by leave, withdrawn.

The Hon'ble MR. RISLEY moved that the Bill, as settled in Council, be passed.

The Motion was put and agreed to.

#### THE BENGAL SANITARY DRAINAGE BILL.

The Hon'ble MR. LYALL moved that the Bill to facilitate the construction of drainage works for improving the sanitary condition of local areas be referred back to the Select Committee. He said:—

"At this late stage I do not propose to trouble the Council with more than a very few words. The Council will remember that at the end of February last the Select Committee who sat on this Bill presented a Report, and that in the last paragraph of their Report they recommended that the Bill as amended by them should be republished. In accordance with that recommendation the Bill has been republished; and in doing so the Government issued a Circular to all local authorities drawing their attention to the provisions of the amended Bill, and calling for an expression of their opinion. In accordance with that Circular a great number of replies have been received, some of which are very much to the point, and criticise the Bill on points which I think require more consideration than can be given at a sitting of the full Council. There are two points in particular on which new light has been thrown. Those are first, the question of dealing with projects falling partly within the limits of one or more municipality. The other point is the manner in which the cost of the work carried out under the Act should be realised. These two points in themselves are sufficiently important to justify my placing on the agenda the motion standing in my name."

The Motion was put and agreed to.

The Hon'ble MR. LYALL also moved that the Hon'ble MR. RISLEY be appointed to the Select Committee in the place of the Hon'ble MR. COLLIER.

The Motion was put and agreed to.

### ADJOURNMENT OF THE COUNCIL.

The HON'BLE THE PRESIDENT said:—"This brings us to the end of the Cold-weather Session of 1894-95, and when we meet in July and August next, the first business of the Council will be to receive from the Select Committee the Report on the Drainage Bill; and I trust that after such amendments as may seem necessary to be made, the Bill will be passed into law. There is a possibility of there being another Bill laid before the Council, namely, a Bill to amend the Partition Law, which has been in preparation for some time and has been sent to the Government of India, and if it be received back in time, it may perhaps be passed in the Summer Session, otherwise it will have to be delayed. I do not think there is any other legal work of importance with which I shall have to trouble the Council.

"I cannot close this Session without saying one word, with reference to what fell from the Hon'ble MR. GHOSE, to express how heartily I appreciate the spirit in which he and his *confrères* have joined our meetings, and how cordially I agree with what he has said, that the spirit of compromise and the endeavour to assist the Government by careful, honest and zealous consideration of the measures laid before them, has been the leading note of the members of this Council. I am quite satisfied in my own mind that the extension of the Council has materially added to its strength, to its popularity, and to its power of doing good for the country. Of the hon'ble members present there are, I think, three whose term of office will come to an end before we meet next time, and who may be re-elected or who may not. If they are re-elected, we shall welcome them back; if not, we hope we shall find in their successors colleagues who are as generous and as zealous as they have been."

The Council adjourned *sine die*.

CALCUTTA, }  
The 30th April 1895. }

H. L. BELL,  
Offg. Assistant Secy. to the Govt. of Bengal,  
Legislative Department.

## WEATHER AND CROP REPORT.

*For the week ending the 29th April, 1895.*

**Burdwan.**—Rainfall at Burdwan 42. Weather hot. Transplantation of sugarcane nearly finished. Cultivation of lands for *aus* rice going on. Price of common rice varies from 10 to 21 seers a rupee in the district.

**Midnapore.**—Rainfall 131. Weather hot and windy. Sugarcane and indigo are promising. *Boro* and tobacco are doing badly in the Sadar subdivision. Fodder and water sufficient. Rice sells from 16 to 22 seers per rupee.

**24-Parganas.**—Rainfall 39. Weather seasonable. No crops on the ground except *boro* paddy in parts of thana Bankipur, the harvesting of which has commenced. Ploughing continues for early crops. Condition of cattle good. Fodder and water sufficient. Rice sells at—

	Srs.	
Sadar	11 to 13	} per rupee.
Barasat	16	
Basirhat	20	
Diamond Harbour	15	

**Murshidabad.**—Rainfall 20. Weather hot; occasionally cloudy. Sowing of *bhadoi* and cultivation of jute continue. The late rain has done good to standing crops. Indigo and mulberry seem promising. Fodder sufficient. Cattle-disease in thana Suti. Price of common rice 17 seers per rupee.

**Khulna.**—Rainfall at Khulna 195, Bagirhat 88, Satkhira 150. A hailstorm on the 28th. Weather hot. Cultivation of land for *aus* continues. The rain has done much good for the preparation of lands. Common rice sells from 18 to 22 seers per rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall 261. Weather cloudy. *Bhadoi* and jute cultivation going on. Small-pox prevalent among cattle in the town and suburb. No complaint for fodder nor for drinking water. Rice sells from 16 to 17 seers a rupee.

**Rangpur.**—Rainfall 114. Weather cloudy and windy. Sowing of jute approaching completion. Prospects of crops good.

**Pabna.**—Rainfall 24. Weather hot and cloudy. More rain wanted for the standing crops. Sowing of paddy continues. Common rice selling from 15 to 17 seers a rupee. Fodder and water-supply sufficient.

**Dacca.**—Rainfall nil. Weather hot. Prospects of crops fair. Sowing of jute and rice continues. Common rice 18 seers per rupee. No cattle-disease. Fodder available.

**Chittagong.**—Rainfall 291. Weather cooler. State of crops fair. Prices steady. No cattle-disease.

**Patna.**—Threshing of *rabi* still going on. Some damage done to millet and mango crops by storm on 19th accompanied at Bihar by hailstones. Common rice selling at 18 or 18½ seers per rupee.

**Gaya.**—Rainfall at Sadar 14. Sugarcane and mango crops doing well. Prices of rice are—

	Srs.	
Sadar	16½	} per rupee
Nowada	17	
Jahanabad	17½	
Aurangabad	18½	

These are about normal. Fodder and water sufficient.

**Champaran.**—Rainfall at Motihari 92. Common rice selling at 16 seers a rupee. Fodder and water for cattle sufficient.

**Darbhanga.**—Rainfall 29. East wind prevailing. More rain wanted for early rice and *mung*. Fields are being prepared for *bhadoi* cultivation. Prices stationary. Fodder for cattle sufficient.

**Bhagalpur.**—Report not received.

**Purnea.**—Rainfall 69. More rain wanted. Sowing of paddy still going on. Price of common rice 17 to 24 seers per rupee. No cattle disease. Fodder and water sufficient.

**Cuttack.**—Rainfall .23. Weather hot. Harvest of *dahua* rice nearly over. Ploughing for winter rice going on. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 26 seers 4 chitaks per rupee.

**Hazaribagh.**—*Mahua* harvest over; good outturn. Rain (at Sadar 1.01, Giridi .59) has increased supply of fodder. Weather hotter. Strong east winds. Average price of rice 16 seers per rupee.

**General Summary.**—There was rain in all the reporting districts except Dacca, accompanied by hail in parts of Khulna and Patna. It has done much good to the standing crops, and has facilitated ploughing and early sowings. More rain is required in some few districts. Indigo and young sugarcane are doing well. The harvesting of spring rice in Orissa is nearly over. The *mahua* harvest in Chota Nagpur has yielded a good outturn. The mango crop in Bihar is reported good, but in Patna it has been somewhat damaged by rain and hail. Cattle-disease is prevalent in the town and suburb of Dinajpur. The fodder-supply in Hazaribagh has improved by the late rain. The price of common rice continues generally stationary.

By order of the Lieutenant-Governor of Bengal,  
REVENUE DEPARTMENT,  
*The 30th April, 1895.*

C. F. BUCKLAND,  
*Secretary to the Govt. of Bengal.*

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

l., lightning reflection; K, thunderstorm;

p, passing temporary showers; t, thunder, d; drizzling rain.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

# SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 27TH OF APRIL 1895.

DURING the previous week the pressure distribution was very uniform owing to the unusually high readings in Bengal and the north of the Bay. Calm weather was therefore general, and the local thunderstorms, which were of daily occurrence, kept the air cool over the whole province except at times in East and North Bengal.

The changes which have been going on steadily during the week under review have produced a complete reversal of these conditions. Pressure has been falling almost daily; but though the changes have not been large at any of the Bengal stations except in East Bengal, over the Bay a depression developed, and moving towards the north-east caused important changes in the parts directly affected as well as over the rest of Bengal. The low temperatures, which have been prevalent for some time, have continued during the greater part of the week, but especially in the south-western districts, viz., South-West Bengal, Chota Nagpur, and Orissa.

While pressure remained high in Bengal and the north of the Bay, slow downward changes led to the formation of a shallow low-pressure area in the south or south-west of the Bay. As the depression was at first very shallow and diffused, there was little likelihood of its giving rise to disturbed weather. But on Monday, the 22nd, wind velocity increased in the south of Ceylon, and heavy rain was reported from Galle. The squally weather, which was then probably prevalent over the extreme south of the Bay, extended northwards, and on the 23rd was beginning to be felt in Burmah. The sea became rough at Diamond Island and on the Orissa coast, while a regular cyclonic circulation of winds prevailed over the Bay, being shown by the indraught across the coast at nearly all stations. On Thursday, the 25th, the disturbance was more concentrated, and had evidently begun to move in a north-easterly direction. There was a brisk fall of pressure in Bengal and over the north of the Bay, and heavy rain had begun at Diamond Island. During the following day the movement of the depression was very rapid, and the centre crossed the coast not far from Akyab, where a gale blew for several hours on the night of the 25th. The fall of pressure was very rapid near the centre, and was shown by the changes both at Akyab and Chittagong. The fall at Chittagong on the 26th was a quarter of an inch, at Narayanganj 1.83 inch, and though the fall at Akyab was a fifth of an inch, the rapid rise which follows the passing of the storm centre had been felt there for some hours.

Squally weather extended over the north of the Bay and Lower Bengal, but owing to the easterly motion of the disturbance, these squalls were of very short duration. The rain squalls were felt while the winds were easterly, and the north-westerly dry winds which soon followed gave fine weather over the north-west of the Bay and the greater part of Bengal, even while the storm was raging in the north-east angle of the Bay. The disturbance broke up very quickly after the centre crossed the coast, and numerous thunderstorms occurred in the eastern districts, attended by heavy rain. The pressure distribution which remained after the depression disappeared was the reverse of what obtained in the early part of the week. While there was a rapid rise in East Bengal, there was a brisk fall in the western districts, and the gradient became very steep towards a shallow depression over the south of Bihar and the adjacent part of Chota Nagpur. Defect then varied from 1.2 inch in the south-east to 1.8 inch at Patna. The rainfall continued in the extreme east of the province, but in other parts the distribution of pressure caused a strong inrush of westerly winds attended by a rapid increase of temperature. In Chota Nagpur these winds were dry, but in South-West Bengal the winds being from the Bay, the air became more moist.

**Pressure.**—As stated above, a reversal of the pressure arrangement has been in progress during the week. As readings were high at the beginning and low towards the end, the means differ very little from the normal. They are slightly in excess except in East Bengal, where the depression caused a small defect.

**Temperature.**—Has remained very low in Orissa, Chota Nagpur, and South-West Bengal, and relatively low in the other districts except East Bengal, where there is a mean excess of nearly 1°. The defect for Chota Nagpur is 7.8°, South-West Bengal 4.4°, Orissa 4.2°, Bihar 2.7°, and North Bengal 1.4°.

The average temperatures registered during the week at nine typical stations and their variations from the normal are shown in the following table:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending Saturday, the 27th of April 1895.

	Normal mean maximum temperature for the week ending 27th April.	Actual mean maximum temperature for the week ending 27th April 1895.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 27th April.	Actual mean minimum temperature for the week ending 27th April 1895.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 27th April.	Actual mean daily temperature for the week ending 27th April 1895.	Variation of actual mean from the normal.
Cuttack	102.6	97.3	-5.3	75.9	76.3	+0.4	93.8	86.8	-7.0
Calcutta	94.7	92.1	-2.6	76.1	74.0	-2.1	85.6	83.1	-2.5
Chittagong	88.6	91.7	+3.1	73.5	74.5	+1.0	81.2	83.1	+1.9

Darjeeling	60.9	59.7	-1.2	48.1	48.0	-0.1	64.5	64.2	-0.3

**Rainfall.**—Thunderstorms were fairly numerous during the week, especially in the early part. The heaviest showers occurred in Chota Nagpur and North Bengal, the former of which received much more than is usual at this season of the year. In the latter the fall was in excess of the normal by about a quarter of an inch. In Bihar rather more than the normal amount fell. Of the other three districts, East Bengal alone was to any great extent below the average. The fall there was '60 inch as compared with the normal fall of 1'45 inches :—

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 27th of April 1895 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.

## NOMINATION OF REPRESENTATIVES TO SEATS IN THE COUNCIL OF THE LIEUTENANT-GOVERNOR FOR MAKING LAWS AND REGULATIONS ON THE RECOMMENDATION OF PUBLIC BODIES AND ASSOCIATIONS.

RESOLUTION—No. 29J.—D.

JUDICIAL.

*Dated Darjeeling, the 6th May 1895.*

UNDER Rule II of the Regulations which have been framed by the Governor-General in Council with the sanction of the Secretary of State under section 1 (4) of the Indian Councils Act, 1892, for Bengal, it has been laid down that the nomination to seven seats in the Council of the Lieutenant-Governor for making Laws and Regulations shall be made by the Lieutenant-Governor on the recommendation of the following bodies and associations respectively, viz.—

- A.—The Corporation of Calcutta;
- B.—Such Municipal Corporations, or group or groups of Municipal Corporations other than the Corporation of Calcutta, as the Lieutenant-Governor may from time to time prescribe by notification in the *Calcutta Gazette*;
- C.—Such District Boards, or group or groups of District Boards, as the Lieutenant-Governor may from time to time prescribe as aforesaid;
- D.—Such Association or Associations of merchants, manufacturers or tradesmen as the Lieutenant-Governor may from time to time prescribe as aforesaid;
- E.—The Senate of the University of Calcutta:

Provided that the bodies described above under A, B, C, D, and E, respectively shall each (except as hereinafter provided in Rule VII) have at least one Councillor nominated upon its recommendation, and A, D, and E not more than one each.

With reference to the above proviso, it has been decided that District Municipalities and District Boards shall each be ordinarily represented by two members.

2. In accordance with this rule the nominations to seven seats have from time to time been made by the Lieutenant-Governor on the recommendation of public bodies and associations, and the following gentlemen have been appointed to be members of His Honour's Council:—

Name of member.	By whom recommended.	Dates of appointment to Council.
The Hon'ble Surendra Nath Banerjee ...	By the Corporation of Calcutta.	6th June 1893.
„ L. M. Ghose, Barrister-at-law ...	By the Municipalities in the Presidency Division.	Ditto.
„ Maharaja Jagadindra Nath Roy of Nator.	By the Municipalities in the Rajshahi Division.	23rd January 1894.
The Hon'ble Maharaja Sir Luchmessur Singh Bahadur, K.C.I.E., of Darbhanga.	By the District Boards in the Patna Division.	6th June 1893.
The Hon'ble Moulvi Serajul Islam, Khan Bahadur.	By the District Boards in the Chittagong Division.	Ditto.
The Hon'ble C. E. Smyth ...	By the Bengal Chamber of Commerce.	22nd March 1896.
„ W. C. Bonnerjee, Barrister-at-law.	By the Senate of the Calcutta University.	6th June 1893.

3. Mr. W. C. Bonnerjee has lately resigned his appointment on his departure for Europe, and the Senate of the University of Calcutta has been asked by a separate communication to recommend a successor for nomination to the Council by the Lieutenant-Governor. The appointment of the Hon'ble Mr. Smyth as representative of the Bengal Chamber of Commerce has very recently been made, and no steps therefore are required in respect of the representation of the Chamber. The appointment of Maharaja Jagadindra Nath Roy of Nator, on the recommendation of the municipalities of the Rajshahi Division, took effect from the 23rd January 1894, and the term of the Maharaja's office will therefore not expire till the 22nd January 1896. But the term of the appointment of the Hon'ble Surendra Nath Banerjee, L. M. Ghose, the Maharaja of Darbhanga, and Moulvi Serajul Islam, Khan Bahadur, will expire on the 5th June 1895.

• The Corporation of Calcutta has been asked by a separate communication to recommend a person for nomination to the Council by the Lieutenant-Governor. The procedure followed will be exactly the same as on the previous occasion, and the votes of the Commissioners of the Corporation of Calcutta will be given at a meeting of the Commissioners.

4. It was stated in paragraph 5 of the Resolution of this Government, dated the 25th March 1893, that both District Boards and Municipalities would be grouped together separately division by division, and that the District Boards and Municipalities within each divisional area would take it in turns to exercise the privilege of recommending a person for nomination to the Council. It was proposed that this privilege should be exercised by the group of municipalities and District Boards in each Division according to rotation in the following order:—

Date of election.	Municipalities.	District Boards.
1893 ...	Presidency Division	Patna Division.
	Rajshahi Division	Chittagong Division.
1895 ...	Burdwan Division	Dacca Division.

1897 ...	Patna Division	Presidency Division.
	Chittagong Division	Rajshahi Division.
1899 ...	Dacca Division	Burdwan Division.
	Bhagalpur Division	Orissa Division.
1901 ...	Presidency Division	Patna Division.
	Rajshahi Division	Chittagong Division.

and so on.

In accordance with the decision arrived at in 1893, the necessary notifications will now be published in the *Calcutta Gazette*, specifying the groups of District Boards in the Dacca and Bhagalpur Divisions and Municipalities in the Burdwan Division, from which a recommendation will be made to the Lieutenant-Governor for the nomination to three seats in Council. The vacancy which will be filled on the recommendation of the Orissa and Chota Nagpur Municipalities will not occur until January next, and no notification will therefore issue at present in respect of those groups.

5. The Lieutenant-Governor is pleased to prescribe that the same procedure shall be followed as was adopted in 1893, and that for the purpose of making its recommendation, each District Board and Municipality concerned shall proceed to elect from amongst its own members an electoral representative who shall be entrusted with full powers to vote for a member to represent the group in Council.

6. In respect of Municipal Corporations, it has been determined that only those municipalities which enjoy a clear income from municipal resources proper of Rs. 5,000 and over shall exercise the right of electing an electoral representative. The voting power of each of these representatives will be calculated by the income of the municipalities concerned according to the following scale:—

	Votes.
Municipalities with an income of Rs. 5,000 and less than Rs. 10,000 will be entitled to ...	1
Municipalities with an income of Rs. 10,000 and less than Rs. 20,000 to ...	2
Municipalities with an income of Rs. 20,000 and less than Rs. 50,000 to ...	3
Municipalities with an income of Rs. 50,000 and less than Rs. 1,00,000 to ...	4
Municipalities with an income of Rs. 1,00,000 and less than Rs. 1,50,000 to ...	5
Municipalities with an income of Rs. 1,50,000 and less than Rs. 2,00,000 to ...	6
Municipalities with an income of Rs. 2,00,000 and less than Rs. 2,50,000 to ...	7
Municipalities with an income of Rs. 2,50,000 and over to ...	8

Each Municipality will elect one electoral representative only, and this representative shall be entitled to exercise all the votes of the Municipality which he represents.

7. All districts are considered by the Government to be of approximately equal importance, and each District Board will appoint one representative having one vote.

8. According to the scales above laid down, the following Municipalities and District Boards will now proceed to elect their electoral representatives as follows:—

Municipalities in the Burdwan Division.					
District.	Name of Municipality.			Ordinary Municipal Income.*	Number of votes to be exercised by each representative.
				Rs.	
Burdwan	{	Burdwan	...	90,656	4

Mymensingh.Faridpur.  
Backergunge.*District Boards in the Bhagalpur Division.*Monghyr.  
Bhagalpur.Purnea.  
Malda.

9. Under Rule IV of the Regulations quoted, the Lieutenant-Governor now desires that intimation may be at once communicated by the Commissioners of the Divisions concerned to the Chairmen of all the Municipalities and District Boards enumerated in the above lists, requesting them to arrange without delay for the convention of a special meeting of each District Board and Municipality concerned, at which one of their members may be elected to represent them for the purpose of recommending the nomination of a member in the Lieutenant-Governor's Council. The name of the electoral representative elected in each must be reported at once by the Chairman of the local body concerned for the information of the Commissioner of the Division.

10. The period of two months which is contemplated under Rule VII of the Regulations as the period within which a recommendation shall be made to the Lieutenant-Governor is hereby declared to run from the date on which the Commissioner of the Division issues his invitation to the Chairman of any Municipality or District Board within the group concerned to elect one of their members to represent them for the purpose of recommending the nomination of a member in the Lieutenant-Governor's Council.

11. As soon as the electoral representatives are elected by the local bodies concerned, they will be called upon by the Commissioner of the Division to meet together on an early and convenient date with special reference to the limit of time imposed under rule VII of the Regulations, and at such convenient place as he may specify, for the purpose of electing by a majority of votes a person whom they will recommend to the Lieutenant-Governor to be nominated as a member of the Council. The names of all candidates put forward at such meeting shall be duly proposed by one of the electoral representatives present. The election shall be by ballot, and the person elected must obtain a majority of the votes of the representatives present. If on occasion of the first ballot an absolute majority is not obtained, the candidate who obtains the least number of votes shall be withdrawn from the election, and another ballot shall then be held for the remaining candidates, and so on until an absolute majority is obtained.

The electoral representatives present at this meeting shall elect among themselves a Chairman, who shall preside and be responsible for the fair and proper exercise of the ballot vote.

As soon as the election is made, the Chairman of the meeting shall without delay report to the Commissioner of the Division the name of the person so elected with the number of votes obtained and any other information which it may appear desirable to communicate, and on behalf of the meeting shall recommend to the Lieutenant-Governor to nominate for Council the person so elected. The Commissioner shall submit the report from the Chairman of the meeting, with any observations he may wish to add, to the Chief Secretary to Government, by whom the recommendations will be submitted to the Lieutenant-Governor.

12. Attention is drawn to the following Rule VI of the Regulations which have been framed by the Governor-General in Council and Secretary of State:—

VI.—It shall be a condition in the case of any person to be recommended by a Municipal Corporation or group of Municipal Corporations that he shall be a person ordinarily resident within the Municipality or the district in which it is situated, or in some one of the Municipalities constituting the group or of the districts in which they are situated. A similar condition shall also apply to persons to be recommended by District Boards.

Under this rule it is not necessary that persons recommended shall be members of any Municipality or District Board concerned, but they must be ordinarily resident within the division from which the recommendation is made. Subject to this condition, the rules declare no limit of qualification, and it is left to the electoral representatives to recommend a person under Rule V(c) according to the majority of their votes.

13. It is desirable that the subsidiary arrangements now sanctioned shall as far as possible be given effect to by the local bodies concerned with the minimum of official interference. But, as was done on the last occasion in 1893, when there was no hitch or misunderstanding of any sort, Divisional

Commissioners and District Magistrates will of course afford any assistance which may be required, and do their utmost to facilitate the smooth working of the elections.

ORDERED that a copy of this Resolution be furnished to all Commissioners for information and guidance, and for communication to all the District Boards and Municipalities in their Divisions.

Ordered also that a copy be published in the *Calcutta Gazette*.

By order to the Lieutenant-Governor of Bengal,

## RESOLUTION.

READ—

Letter from the Accountant-General, Bengal, No. 44L.F., dated 17th April 1895, submitting an abstract of receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 31st December 1894.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees in Bengal for the 3rd quarter of the year 1894-95 be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette*.

Ordered also that a copy of this Resolution, and of the abstract referred to, be forwarded for information to the—

Commissioners of the Rajshahi, Chittagong, Bhagalpur and Chota Nagpur Divisions.

Superintending Engineers of the Northern and Western Circles.

Inspector of Works, Eastern Circle.

Financial Department of this Government.

By order of the Lieutenant-Governor of Bengal,

F. J. JOHNSTONE,

*Secretary to the Government of Bengal.*

Basirhat	...	...	...	20	
Diamond Harbour	...	...	...	15	

**Murshidabad.**—Rainfall 74. Weather hot. Sowing of *bhadoi* continues. Lands are being ploughed for sowing winter rice. Indigo and mulberry are progressing. Fodder sufficient. Cattle-disease in Suti. Price of common rice 16 seers per rupee.

**Khulna.**—Rainfall at Khulna 5·28, Bagirhat 4·38, Satkhira 2·10. Weather hot. Cultivation of lands for *aus* and *aman* going on. Harvesting of *boro* continues. Fodder and water sufficient. Common rice sells from 18 to 24 seers a rupee.

**Dinajpur.**—Average rainfall 77. Weather hot and cloudy. The rain has done good to *bhadoi* rice and jute. Common rice sells from 16 to 17 seers per rupee. Cattle-disease still prevalent. Fodder and water sufficient.

**Rangpur.**—Average rainfall 1·66. Weather seasonable and warm. Sowing of jute nearly completed. Common rice selling at 12 to 14 seers a rupee. A few cases of cattle-disease reported. Fodder available.

**Pabna.**—Rainfall 56. Weather hot. Further rainfall has benefited crops, and sowing of paddy and jute still continues. Common rice selling at 14 to 17 seers per rupee. Fodder and water-supply sufficient.

**Dacca.**—Rainfall 4·42. Weather cloudy and rainy. Prospects of crops good. Sowing of jute continues. Common rice sells from 12 to 20 seers per rupee. No cattle-disease. Fodder available.

**Chittagong.**—Rainfall 2·47. Weather hot. Land is being prepared for *aus* crop. Prices slightly risen. Health of cattle good.

**Patna.**—Rainfall 10. Millet and sugarcane doing well. Some injury done to mango by storm. Common rice selling from 17½ to 18½ seers per rupee.

**Gaya.**—Rainfall at Sadar only one cent. Weather generally cloudy with easterly wind. Mangoes somewhat damaged by wind. Sugarcane doing well. Prices about normal. Water and fodder sufficient.

**Champanan.**—Rainfall at Motihari 13. Weather cooler than usual. Opium weighments are almost finished. Common rice selling at 16 seers per rupee.

**Darbhanga.**—Early rice, *mung* and indigo have benefited by rain. Lands are being ploughed for *bhadoi* sowings. Fodder for cattle sufficient. Prices stationary.

**Bhagalpur.**—Weather cloudy with easterly wind. *Rabi* harvest completed. Mangoes slightly injured by storm. *Bhadoi* sowing in progress.

**Purnea.**—Rainfall 1·17. Sowing of paddy still continues. The rainfall has proved beneficial to paddy and indigo. Common rice sells from 16 to 22 seers per rupee. Supply of fodder and water sufficient.

**Cuttack.**—Rainfall 53. Weather hot. *Dalua* (spring rice) harvest over. Ploughing for *baali* (autumn rice) and winter rice going on. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 26 seers 4 chitaks per rupee.

**Hazaribagh.**—Rainfall at Sadar 1·63, Giridi 92. Weather cool. Ploughing going on in consequence of showers on Friday and Sunday (3rd and 5th instant). Fodder sufficient at head-quarters, but scanty at Giridi. Prices stationary.

---

**General Summary.**—There was rain over the whole province during the week, the heaviest falls being in Eastern and Central Bengal. Agricultural prospects are generally favourable. Ploughing is now in progress in most districts, and the early rice and jute are being sown. Indigo and sugarcane are doing well. The harvesting of spring rice in Orissa is finished, but in other districts it is still proceeding. In Bihar mangoes have been slightly injured by storms. Cattle-disease is still prevalent in Dinajpur, and has also made its appearance in the southern part of Patna and in Murshidabad. The fodder-supply at Giridi is still reported to be scanty. The price of common rice is steady.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,  
*The 7th May 1895.*

C. E. BUCKLAND,  
*Secretary to the Govt. of Bengal.*

# Meteorological Report of the Province of Bengal

*Argonne.*—*Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the readings during the same period for the years. The accuracy of the atmosphere is expressed in percentage, calculated as being represented by 100. A clear sky is denoted by 0 and a overcast sky by 10. The mean of the numerical means or average of the values that indicate the amount of rain, from the returns sent in by the individual stations for the period in question, is the distinct tendency returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 4th of May 1895.

DISTRICT OBSERVATIONS.																District.

set ten years. The variations are *negatives* when the mean of the week is less than the corresponding normal mean, and *positives* when greater. Numbers denoting cloud amount represents the part of the sky covered, the whole sky being counted by 10. Under the head District observations of rainfall the normal during the past ten years. The means of the district are the numerical average of the rainfall returned received in the district, i.e., from total rainfall at the subdivisions.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY-  
THE 4TH OF MAY 1895.**

• TOWARDS the end of the previous week a small cyclonic storm had moved into the north-east angle of the Bay, and breaking up soon after crossing the coast left unsettled conditions over a considerable area, including part of Bengal.

*Pressure* was very low over Bengal at the beginning of the present week, and there was a slight intensification of the arrangement during the first two days. A shallow depression showed over the southern districts for some days; and as the gradient was unusually steep both over the Bay and over the province, strong winds blew in all districts, south-westerly in South-West Bengal, Orissa, and Chota Nagpur, and easterly elsewhere. The interference of these different winds caused thunderstorms, which began in East Bengal, where very heavy rain fell on Sunday, the 28th April, and gradually spread westwards over the province. This was probably in consequence of a displacement of the area of lowest pressure towards the south-west, and an extension of easterly winds over Lower Bengal. Following the rainfall, the area of relatively low temperature increased towards the west, and after a few days included the whole province. Thus, at the beginning of the week, there were large differences of pressure, large differences of temperature, and a very rapid air motion. These continued with very little change during the first half of the week, but during the second half pressure was rising rapidly as a rule, temperature became more even by falling in the south-western districts, and the strength of the wind gradually moderated.

One of the most important results of the unsettled weather has been the general and for the season the heavy rainfall, which was caused by the irregular weather conditions during the week. As is usual at this season of the year, it was caused by thunderstorms, and was therefore very irregular in amount. The rainfall began in East Bengal and Assam, where it was very heavy during the early days of the week and spread westward, but was not general in the western districts till the end of the week.

*Pressure.*—On April 28th pressure was relatively lowest in Lower Bengal, where there was defect of more than .2 inch. The changes during the previous day had been small, but caused a slight deepening of the depression over Lower Bengal. A slow fall continued on the 29th, but was followed on the 30th by a rapid rise, which gave almost normal readings in the northern districts, and diminished the defect in the southern districts by one-half. The rapid rise continued on the 1st of May and resulted in a much more uniform distribution and general excess over the province and the Bay. There was a slow to moderate fall on the 2nd, a rise of similar amount on the 3rd, and a brisk rise on the 4th, so that with the exception of the 2nd, the recovery of pressure continued during the last five days of the week. As there was a large defect at the beginning of the week and a rather large excess towards the end, the means for the week do not differ much from the normal. There is generally a small defect.

*Temperature.*—At the beginning of the week high temperatures prevailed in Lower Bengal, Orissa, Chota Nagpur and part of Bihar; but as thunderstorms became more prevalent, these high temperatures fell several degrees below the normal. The highest readings in Orissa and South-West Bengal were over  $112^{\circ}$ , and in Bihar and Chota Nagpur over  $105^{\circ}$ . The change towards the end of the week has lowered the means so much that there is excess only in Orissa. In the other districts there is defect, ranging up to  $3^{\circ}3$  in North Bengal.

*Rainfall* has been heavy at times in all districts, but especially in East Bengal, where the average fall is 5.22 inches, more than twice the normal. The fall in North Bengal and Bihar is very nearly normal. In Orissa and Chota Nagpur there is excess of about half an inch, and in South-West Bengal of .7 inch. As these falls were due to thunderstorms, they were very irregular from place to place, but beginning in East Bengal, they gradually spread westwards over the province, and were received in the western districts only on the last two or three days of the week.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 4th of May 1895 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st of April 1895.

Offg. Meteorological Reporter to the Govt. of Bengal.

**Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of April 1895.**

	Inches.	Date.	Hour.
The mean pressure of the month ... ..	29·774		
The average pressure of April from 24 years' registers ... ..	29·752		
The highest pressure in the month ... ..	29·990	13th	22
The lowest pressure in the month ... ..	29·416	28th	16
The range of pressure ... ..	0·574		
The total number of hours of bright sunshine during the month	250·4		
The maximum possible number of hours of sunshine ... ..	378·9		
☉			
The mean temperature of the month ... ..	83·0		
The average temperature of April from 24 years' registers ... ..	84·7		
The highest temperature in the month ... ..	99·4	28th	
The lowest temperature in the month ... ..	66·6	8th	
The range of temperature during the month ... ..	32·8		
The mean daily range of temperature ... ..	18·3		
The greatest range of temperature in one day ... ..	23·4	8th	
Per cent.			
The mean humidity of the month ... ..	71		
The average humidity of April from 24 years' registers ... ..	69		
Inches.			
The mean vapour tension of the month ... ..	0·791		
The average vapour tension of April from 9 years' registers ... ..	0·861		
The mean cloud proportion of the month ... ..	3·72		
The average cloud proportion of April from 18 years' registers ... ..	2·74		
Inches.			
The total rainfall of the month ... ..	1·76		
The total rainfall indicated by a Beckley's self-registering rain-gauge (month of the gauge about 52 feet above the ground)	1·59		
The average fall of April from 48 years' registers ... ..	2·81		
The greatest fall in 24 hours ... ..	0·55	12th	
Days.			
The number of rainy days in the month ... ..	9		
The average number of rainy days in April from 24 years' registers ... ..	8		
☉			
The mean maximum equilibrium temperature of solar radiation during the month ... ..	148·0		
The mean difference of sun and air temperatures ... ..	55·8		
The greatest sun temperature ... ..	158·2	23rd	
The greatest excess of sun over air temperature ... ..	64·9	23rd	
The mean temperature of the nocturnal radiation thermometer on woollen cloth ... ..	69·6		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground ... ..	4·4		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature ... ..	8·1	7th	
Miles.			
The mean movement of the wind per day ... ..	136·6		
The greatest movement of the wind in one day ... ..	303·0	30th	
The greatest movement of the wind in one hour ... ..	20·0	21st, 11 to midnight.	
The number of hours with winds from each of the 8 points—

Calm 35.			

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·2 lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

METEOROLOGICAL OFFICE, INDIA;  
Calcutta, the 6th May 1895.

The total fall of rain from 28th April to 4th May 1895 ... .. 1.18

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. 0.70

The total fall from 1st January to 4th May 1895 ... .. 3.14

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. 5.25

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; t, thunder; <, lightning; p, passing temporary showers.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

### RESOLUTION ON THE CHEMICAL EXAMINER'S REPORT FOR 1894.

#### MUNICIPAL DEPARTMENT—MEDICAL.

*Darjeeling, the 7th May 1895.*

RESOLUTION—No. 241—M

#### READ—

A letter from the Inspector-General of Civil Hospitals, Bengal, No 2198, dated the 9th March 1895, forwarding the report of the Chemical Examiner to Government for the year 1894.

#### Read also—

The report for 1893 and the Resolution recorded on it

The number of analyses performed during the year was 2,940 against 3,462 in 1893 and 3,403 in 1892. There was a decrease of 522 cases in the number of analyses performed during the year as compared with 1893, and of 463 cases as compared with 1892. The decrease occurred chiefly in substances other than animal tissue suspected to be or to contain poison, including cattle-poison, in articles tested for blood stains, and in petroleum and inflammable oils. In addition to his analytical work, the Chemical Examiner had to report on nine technical questions and eleven applications for leave to file specifications for patent processes.

2. The total number of medico-legal cases referred to the Chemical Examiner during the year was 787, the number of articles sent for examination in connection with them being 1,451 or 170 less than in the previous year. The decrease was mainly in substances tested for poison and articles tested for blood stains. Two hundred and ninety human viscera were examined for

poison against two hundred and sixty-nine in the previous year, and in 45·86 per cent. of these cases poison was found against 45·95 in 1893 and 45·65 in 1892. Opium was, as usual, the most common form of poison, and was found in 21·55 per cent. of the cases, against 26·10 in the year before. The other principal poisons detected were arsenic, morphia and aconite. In 157 out of 290 human viscera, and in 312 other cases of suspected substances out of 758 sent up for analysis, no poison was found. The number of suspected cattle-poisoning cases in which animal viscera were sent up for examination was 154, the same number as in the previous year, and in these arsenic was discovered in 74·67 per cent. against 74·02 in 1893.

3. The number of articles tested for purity and quality was 1,489 against 1,841 in the previous year. The decrease was mainly under the head of petroleum, alcoholic spirit, and explosives sent for analysis. In consequence of the orders issued in 1894, under which Chairmen of Municipalities and District Officers have been authorised to send water for analysis to Mr. Norman Rudolf, who has established a Chemical Laboratory at Siwan in the district of Saran, the Chemical Examiner has been relieved of a good deal of his work in this direction. Before these orders were received, however, 197 samples of potable water had been examined. Of these 15 were sent up by municipalities, 105 were from Jails, and 77 from other Departments.

4. The results of the analysis of 192 samples of potable water examined during the year are set forth in Appendix A to the Chemical Examiner's report. The samples are arranged in the following classes:—

Class.					Number of samples.
Good	...	...	...	...	28
Fair	...	...	...	...	83
Indifferent	...	...	...	...	34
Bad	...	...	...	...	47

In commenting on this classification the Chemical Examiner observes that hardly any of the waters are up to the European standard of purity, ammonia, both free and albuminoid, and nitrogen being present in larger quantities than would be regarded by sanitary authorities in Europe as admissible in good drinking water. The Lieutenant-Governor has found a difficulty in making out what relation the figures in the different columns of the statement bear to the conclusions arrived at regarding the comparative purity of the different classes of water. It is understood, however, from an unofficial reference to Dr. Evans, that the classification adopted by him is based upon the practice of English analytical chemists, who look to the probable combined effect of all the component elements of water, and reject as misleading what is known as Wigner's system, which assigns a numerical value to the various chemical factors in accordance with an arbitrary scale of marks.

5. Important researches were made by the Chemical Examiner during the year into the physiological properties of hemp drugs, samples of which were sent to him for examination by the Hemp Drugs Commission, and into the effect of different modes of packing ganja upon the quality of the drug. The latter inquiry was undertaken at the instance of the Board of Revenue, who supplied the samples for analysis, and on the results obtained the Chemical Examiner has based the opinion that although a considerable chemical change takes place in ganja when kept, this change is not influenced by the mode of packing adopted.

The acknowledgments of the Lieutenant-Governor are due to Dr. Evans for his interesting report and for the good work done by him during the year. His Honour notices with satisfaction the remarks of commendation passed by Dr. Evans on the laboratory staff. During the year the Assistant Chemical Examiner, Rai Tara Prasanna Rai Bahadur, retired from the service, after spending 23 years in the Chemical Department. The Lieutenant-Governor takes this opportunity of placing on record his sense of the valuable services rendered to Government by this officer.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

*Secretary to the Govt. of Bengal.*

## SALE OF QUININE IN PICE PACKETS IN BENGAL.

## MUNICIPAL DEPARTMENT—MEDICAL.

*Darjeeling, the 7th May 1895.*

RESOLUTION—No. 31T.—M.

READ—

A report, dated 1st December 1894, by the Inspector-General of Civil Hospitals, on the sale of quinine by Subordinate Medical Officers.

Statements furnished by the Inspector-General of Jails showing the quantity of quinine supplied to Post Offices and Civil Surgeons from the beginning of the operations in November 1892 to the 30th September 1894.

Road again—

Resolution by the Government of Bengal, Municipal Department, No. 3263, dated the 6th December 1892, regarding the extension of the sale of quinine among the poorer classes in Bengal.

In the Resolution of the 6th December 1892, the Lieutenant-Governor reviewed the history of various attempts which had been made to popularise the use of quinine and to extend its sale among the poorer classes in the interior of Bengal, indicated the causes of their failure, and put forward a new scheme which seemed likely to have greater prospects of success. This scheme proposed to create a demand for pure quinine among the poor by selling it in small quantities at a large number of centres for the smallest coin in common use, and by giving the sellers an interest in pushing the sales. It was arranged to supply the quinine from the Government Factory at Darjeeling, and to make it up by jail labour into packets containing five grains each and bearing a Government stamp as a guarantee of its purity. The price of each packet was fixed at one pice.

2. It was intended that these packets should eventually be offered for sale at all public offices in the interior of districts, such as police-stations and outposts, dispensaries, pounds and post-offices; but as a first step, with the permission of the Government of India, the experiment was commenced through the agency of the Postal Department at all offices except those in large towns where it was then believed that even the poorer classes had other means of procuring pure quinine. Every post-master in charge of a branch office or sub-post-office was supplied through the post, by the Superintendent of Jail Manufactures, Calcutta, with one or more parcels of 102 packets holding 5 grains of quinine apiece. Each parcel being worth, at a pice per packet, Re. 1-9-6; the value of six packets, or an anna and-a-half, was retained as commission by the vendor, and Re. 1-8 was repaid to Government. The value of the first consignment of parcels was treated as a permanent advance; but when further supplies were required they were paid for by money-order, the commission on which was borne by the Jail Department. The five-grain packets were sold at one pice each, and the value of them accounted for by the post-masters.

3. Proceedings commenced in the Bengal Postal Circle, and as soon as the scheme was found to be working well, the other two circles, Eastern Bengal and Bihar, were simultaneously supplied with quinine. The most fever-stricken districts were taken up first, and by the end of November 1892, 34,986 pice packets had been supplied to the nine districts noted in the margin. Within the following month 160,854 packets were sent out to all districts except those of Bihar and Chota Nagpur, and during January 1893 201,111 packets were distributed, thus completing the initial supply for the whole Province. During the next seven months supplies were sent to Civil Surgeons for sale in the outposts through dispensaries, the vaccination establishment or otherwise. The East Indian Railway Company was also allowed to co-operate in the scheme, their station-masters at small road-side stations being permitted to sell quinine in the same manner as post-masters; and lastly, all private employers of labour, zamindars and indigo and tea planters who might desire to take advantage of this method of distributing quinine, were invited to apply to the Superintendent of Jail Manufactures.

4. As the experiment was started during the months when fever is least prevalent in Bengal, and also owing to its novelty, comparatively slow progress was made in the earlier stages. The remittances made on account of the price of quinine sold from November 1892 to the end of March 1893 amounted to Rs. 844-0-6, representing 57,390 pice packets actually sold, or an average of 11,478 per month. Ampler statistics have since been furnished covering the period from November 1892 to the end of September 1894, and these will not be examined with reference to the general progress of the scheme and the comparative efficiency of the two agencies engaged in selling quinine—the post-offices and the Civil Surgeons. Statements A and B annexed to this Resolution show the supplies to, and sales by, Civil Surgeons and post-offices respectively, and the balance of pice packets remaining unsold at the end of September 1894. Statement C gives for each district the population, the fever mortality and quinine sales, and compares the position of districts with reference to the sales per thousand of population, the gross sales, and the fever mortality.

5. The following statement shows month by month the supplies of pice packets of quinine to postal officials and Civil Surgeons up to the end of September 1894, and the monthly mortality from fever per thousand of population during the period referred to:—

YEAR AND MONTH.	NUMBER OF PACKETS SUPPLIED—		Total.	Monthly death-rate from fever.

6. Out of the 3,211,266 packets issued to post-offices and Civil Surgeons, 2,391,594 were sold and 819,672 remained in stock at the close of the period. The monthly average of sales was 104,669 packets, against 11,478 for the first five months of the period. This indicates satisfactory progress, so far, at any rate, as the Postal Department is concerned. The results of sales through Civil

Surgeons are less encouraging, and vary so greatly from district to district that they will for the present be left out of account in judging of the general success of the scheme.

7. Taking, then, the returns of supplies to post-offices as given in column 2 above, it should be explained that the high figures of the first three months represent the original stocks sent out to post-masters. By the end of January 1893 all offices had been fully supplied, and from that time onward the statistics of supply may for practical purposes be treated as statistics of sale, as a new supply is sent out only when the previous one is nearly exhausted. From February to May 1893 the demand was small, the experiment was a new one, and large stocks were in hand. In June of that year the demand began to increase, and it rose rapidly up to November, when the indents for fresh supplies reached the high figure of 309,978 packets. From that point the figures decline (with a rise in March and April 1894 corresponding to an increase in the fever mortality) to 88,842 in June 1894, rising again as the rains set in to 196,146 in September 1894, the last month for which statistics are now available. It is significant and encouraging to observe that while the indents during the five months May to September 1893 amounted to 446,453 packets, the supplies in the corresponding months of 1894 came to 746,538 packets, an advance of 67 per cent., and that the monthly average for the twelve months ending September 1894 was 175,851 packets. It may fairly be concluded that the rise and fall of sales varying with the unhealthiness of the season, and the great difference in the figures of corresponding periods in two successive years, show that the uses of quinine are beginning to be more generally known, and that there is a growing demand for it in the form in which it is now sold.

8. The next point of interest is the extent to which quinine is purchased in different districts. The object in view is that the most feverish districts should be the largest consumers; but this result, if ever arrived at, can hardly be looked for until the system of selling quinine by the dose has been longer in force, and the people have got to know thoroughly the virtues of the drug and the places at which it can be procured. At present, though a degree of success has been attained, Statement C shows that there have been many failures. This statement gives for each district in Bengal the population, the rate of fever mortality for the last three years, the actual quantity of quinine sold, and the relative quantity per thousand of population. It further shows the relative order of the districts in regard to fever mortality, actual sales of quinine through the post-office, and relative sales per thousand of population. The following lists bring out some of the most striking points in the statement:—

Districts in order of fever mortality (average of 1892-94).	Districts in order of actual sales of quinine.	Districts in order of relative sales per thousand of population.
1. Rajshahi.	1. Jessore.	1. Nadia.
2. Jessore.	2. Nadia.	2. Jessore.
3. Malda.	3. Mymensingh.	3. Hooghly.
4. Jalpaiguri.	4. Shahabad.	4. Khulna.
5. Dinajpur.	5. Midnapore.	5. Burdwan.
6. Rangpur.	6. Burdwan.	6. Shahabad.
7. Monghyr.	7. Backergunge.	7. Darjeeling.
8. Shahabad.	8. Khulna.	8. Midnapore.
9. Nadia.	9. Hooghly.	9. Backergunge.
10. Murshidabad.	10. Faridpur.	10. Mymensingh.

\* Clearly if the demand for quinine had been developed to the point of rising and falling in correspondence in the ratio of fever mortality, the same districts ought to figure in the same order in the first and third lists; but in fact out of the ten districts which show the highest average fever mortality, only three, Jessore, Nadia, and Shahabad, appear in the group of districts which have the highest relative consumption of quinine. Rajshahi, which heads the list of bad fever districts, stands only 17th in respect of its relative demand for quinine, while Malda, Jalpaiguri, Dinajpur, Monghyr and Murshidabad are also low down. Endeavours will now be made to trace the causes of this state of things. The Inspector-General of Jails will be asked to furnish the Sanitary Commissioner with detailed statistics for each office of supply, and it is hoped that

the latter officer, by examining his own statistics and by local inquiries conducted by his own inspecting staff in communication with the district officials, will be able to suggest means of further pushing the sales. If it should be the case, as seems not unlikely, that in some of the most feverish parts of these districts post-offices are comparatively sparsely situated, and therefore more difficult of access, it should be considered what other agency could usefully be employed to supplement the sales by the Postal Department.

9. It was observed above that out of a total of 3,211,266 pice packets supplied to postal officers and Civil Surgeons up to the 30th September 1894, only 305,184, or 9·5 per cent., were supplied to the latter. The actual sales up to the same date amount to 2,391,591 packets, of which only 105,468, or 4·4 per cent., were sold by Civil Surgeons. There are no doubt many more post-offices than there are dispensaries, but this of itself hardly accounts for the great disproportion between the sales effected by the two selling agencies; and it is further noticed that up to the 30th September 1894 the Postal Department sold out 78 per cent. of their supplies, while the Civil Surgeons only got rid of 34 per cent. Again, not only were the amounts sold by Civil Surgeons absolutely and relatively much less than those sold by the Postal Department, but the results obtained by the former agency vary remarkably from

\* Bankura.  
Pabna.  
Champaran.

Balasore

Darbhanga.  
Maldn.  
Cuttack.

district to district. Thus in seven districts,\* some of which have a high rate of fever mortality, the jail returns show that the Civil Surgeons had not succeeded in selling a single pice packet up to the

end of September 1894. In two cases, indeed, the Jail Department's returns were disputed, but the amounts alleged to have been sold were small and the remittances appear not to have been made till after the close of the period under review. On the other hand 17,544 packets were sold by Dr. Murray of Shahabad, 11,016 by Dr. Kelly of the Sonthal Parganas, 10,404 by Drs. Stephons and Sinha of Jessore, and 9,792 by Dr. Macdonald of Saran. In reporting on the subject, the Inspector-General of Civil Hospitals mentions that some Civil Surgeons object to selling quinine at dispensaries on the ground that patients expect to get all medicines free, and that it lays medical subordinates open to charges of corruption. Dr. Harvoy considers this argument more plausible than sound, and recommends that the experiment be continued, remarking at the same time that the difficulty referred to seems to be met with in inverse ratio to the trouble taken by the Civil Surgeon.

10. On this branch of the subject the Lieutenant-Governor has arrived at the following conclusions. The sale of quinine by the Civil Surgeons is carried on by means of two agencies—the medical subordinates who remain stationary at the dispensaries, and the vaccination subordinates whose business it is to be constantly travelling in the interior of their districts. Against selling quinine at dispensaries it may fairly be urged that the practice tends to conflict with the long-standing usage of giving medicines free, and may thus lead to confusion in matters of account; that involves competing with the post-offices and thus reducing the commission payable to post-masters and their interest in pushing the sales; and lastly, that it gives an amount of trouble out of proportion to the results obtained. In the Lieutenant-Governor's opinion these arguments have much weight, and he proposes to order the supplies to dispensaries to be stopped. The stocks now in hand can either be sold off by degrees or transferred to the nearest post office, as may be arranged by the Jail Department in communication with the Civil Surgeons concerned. But while relieving the Civil Surgeons from the supervision of the sale of quinine through dispensaries, the Lieutenant-Governor must insist upon their giving special attention to its sale through their subordinates employed on vaccination. These officers move about constantly in the rural portions of their districts, and they are specially fitted to supplement the agency of the post-office in pushing the sale of quinine. Every vaccinator and sub-inspector of vaccination should therefore be supplied with parcels of quinine packets, and should be allowed the commission which is given to post-masters. A special paragraph should be devoted to the working of these orders in the annual report submitted by Civil Surgeons to the Inspector-General of Civil Hospitals.

11. One effect of discontinuing the supply of quinine to dispensaries will be to leave certain towns, where quinine is not now supplied to the post-offices, without any agency for the sale of quinine in pice packets. In the Home Department letter No. 373 of the 8th July 1892, conveying the sanction of the Government of India to the co-operation of the post-office in the scheme as originally launched, it was assumed that the principal object of the proposal being to place quinine within easy reach of the population, it would not be necessary to have recourse to post-offices in the larger towns where other suitable agencies were likely to be found. Further experience has, however, shown that the poorer classes in the so-called towns stand in as great need of pure quinine, and have nearly as much difficulty in getting it, as the people of the interior; and now that it has been decided, for the reasons stated above, to discontinue the supply of quinine to dispensaries, the Lieutenant-Governor trusts that there will be no objection to extending the sale through the postal officials to the larger offices hitherto excluded from the scheme.

12. The following statement submitted by the Inspector-General of Jails gives an abstract of the financial results of the experiment from its commencement to the 30th September 1894 :—

CREDITS.				Rs.
6,078 parcels of quinine in stock at post-offices	...	...	...	8,357
3,008 parcels outstanding with Civil Surgeons, other administrations and others	...	...	...	4,137
Stock of quinine in jail and depot	...	...	...	1,994
22,413 parcels sold by post-masters	...	...	...	31,959
3,020 parcels sold by others	...	...	...	4,148
Total				50,595
DEBITS.				Rs.
Value of quinine received	...	...	...	36,661
Envelopes and papers	...	...	...	2,418
Miscellaneous charges including postage	...	...	...	3,600
Extra establishment at jail depot	...	...	...	490
Lost in transit	...	...	...	156
Total				43,725
Difference or profit				7,870

13. The figures of this statement do not agree with those given in statements A and B, because the latter refer to post-offices and Civil Surgeons only, and do not include supplies to and sales by other persons which have been mixed up with the transactions of Civil Surgeons. Special care must be taken in future in dealing with the accounts and statistics of quinine, and before returns are submitted all discrepancies between the figures prepared by the Jail Department and those supplied by Civil Surgeons should be examined and reconciled by the Superintendent of Jail Manufactures. Taking the present figures as they stand, it appears that Government has made a profit out of the experiment of Rs. 7,870. This was no part of the original scheme; but medical advice is opposed to increasing the quantity of quinine in each packet, and it is clearly impossible to reduce the price below one pice. The Inspector-General of Jails will, however, be asked to report whether anything would be gained by using a better kind of paper for the envelopes. If not, a larger commission will be allowed to post-masters.

14. Reviewing the operations as a whole, and having regard to the novelty of selling quinine by the dose, and the various difficulties of detail which had to be overcome at starting, the Lieutenant-Governor considers that the scheme has been quite as successful as could reasonably have been expected. An effective demand for cheap quinine among the masses of the people has been called into existence; the demand is shown to vary from month to month in general accordance with the conditions tending to produce fever; and there seem to be grounds for hoping that it will continue to increase if stimulated

by judicious administration. Under the scheme as now modified the post-offices all over Bengal will continue to be the main agency for distributing quinine, but attempts will be made to utilise other agencies with the object of reaching the people of outlying tracts who are not within easy reach of post-offices. The employes of the Vaccination Department will doubtless be able to do much in this direction, as their duties take them into rural villages at all times of the year, and the Lieutenant-Governor trusts that District Officers and the higher sanitary officials will lose no opportunity of helping to promote sales and of spreading information as to the wishes of Government in the matter. A further extension may be obtained by imitating the measures taken by Mr. Greer, Deputy Commissioner of Darjeeling. In that district (in parts of which the mortality from fever is extremely high) quinine is now sold or shortly will be sold, at no less than 19 rural centres in addition to places where there are post-offices. The vendors are for the most part respectable shop-keepers. They are supplied with parcels containing 102 packets of quinine, on the same terms as postal officials. With the first supply, a vernacular notice is sent to them stating the conditions, and they are required to agree to sell the quinine at one pice per packet, and to remit the price to Government, less commission of six packets per parcel. A notice signed by the Deputy Commissioner, stating the selling price per packet, is posted up in each shop. Eight vendors have repaid the price of the quinine they have had, and there is said to be no doubt as to the recovery of the balance. The Lieutenant-Governor desires to bring this experiment to the notice of all district officials, and he hopes that what has been found to work well in Darjeeling may prove equally practicable in other districts. All Magistrates of districts are authorised to indent on the Superintendent of Jail Manufactures for the necessary supplies of quinine; and they should arrange to remit the sale proceeds to that officer.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

*Secretary to the Govt. of Bengal.*

---

## RESOLUTION ON THE REPORT ON THE LUNATIC ASYLUMS IN BENGAL FOR THE YEAR 1894.

### MUNICIPAL DEPARTMENT—MEDICAL.

*Darjeeling the 8th May 1895.*

RESOLUTION—No. 47T.—M.

Read—

The report on the lunatic asylums in Bengal for the year 1894.

Read also—

The report for the year 1893 and the Resolution recorded upon it.

The report has been submitted with the same punctuality as in the previous year. It was due to Government on the 1st May, and was received on the 22nd March, *i.e.*, more than a month earlier.

	1893.	1894.
Remaining on the 1st January	Rs. 951	Rs. 916
Admitted and re-admitted	205	200
Total	1,156	1,116
Discharged cured	92	80
Ditto improved	62	29
Ditto not improved	6	3
Ditto otherwise	13	6
Died	77	75
Total	240	193
Remaining on 31st December	916	923
Daily average strength	893	915

2. The statement in the margin, which compares the number of patients in the five native asylums in Bengal during the last two years, and summarises the main facts regarding them, shows that the number of admissions fell off by five.

The number of deaths and discharges dropped from 240 to 193, and the daily average strength from 932 to 915. The number of criminal lunatics in confinement on the last day of the

year was 463, against 445 at the end of 1893, while that of the non-criminal lunatics fell from 471 to 460.

3. Of the 200 persons admitted and readmitted, 108 were criminal lunatics and 92 non-criminal; the figures for the previous year being 103 and 102 respectively. The re-admissions during the year fell from 24 to 20, the decrease occurring in all the asylums except Dullunda, where 14 patients were re-admitted in 1893 against 5 in 1894. Seven of these were criminal lunatics remanded to the asylum after trial; four were cases of insanity, recurring after various intervals of temporary recovery; and three were patients who had been made over to their friends, but were found too troublesome to be kept at home.

4. The number of lunatics discharged fell from 163 to 118, the fall affecting all asylums except Dacca. It was most marked in Dullunda (35) and Patna (19), and in both these institutions the decrease is said to be due to the success attained in the previous year in inducing the friends of harmless lunatics to take charge of them. In this way Dullunda got rid of 78 patients and Patna of 34, as compared with 43 and 15 respectively in 1894, and it is stated that the harmless patients still remaining have no friends or relations willing to take charge of them. The increase in discharges at Dacca from 26 to 42 is put down to the larger number of recoveries.

5. At the close of the year there were 463 criminal lunatics in confinement. Of this number, 185 had been actually tried, acquitted on the ground of insanity, and ordered to be kept in safe custody; 252 had been detained as incapable of making a defence, and 26 were persons who being already in jail for an offence had become insane there, and been transferred to an asylum. The numbers of each class in the previous year were 176, 242, and 27. The daily average strength rose from 441.42 to 448.19, and was higher than in any of the last ten years except 1891. The Inspector-General of Civil Hospitals (Surgeon-Colonel Harvey) remarks that these figures tend to confirm the opinion expressed by him in last year's report, that the operations of the rules framed in 1888 for dealing with criminal lunatics increase the number of such lunatics under detention. It seems, however, doubtful whether these rules have been in force long enough to make it possible to judge of their effect on the number of criminal lunatics, and in any case the question is of no practical importance, as no one

would propose to alter the rules because they added slightly to the period for which criminal patients were detained.

6. The capacity of the different asylums remained unaltered during the year but in Dacca four new cells for female patients have since been completed, and are now in use. This raises the standard of accommodation to 41, which is only slightly below the average daily strength. On the male side of the asylum, accommodation for 50 extra patients was added in 1891, and this has rendered it possible to transfer lunatics from Chittagong to Dacca instead of Dullanda.

7. In statement VII, showing the causes of insanity, only 40 cases out of the 200 admitted are put down to ganja-smoking, against 55 in the previous year, and Dr. Harvey observes in explanation of the reduction that the theory that hemp drugs cause insanity is less readily accepted than it used to be. In reviewing the report for 1890, the Lieutenant Governor referred to the proneness of some persons to conceive ganja a fertile cause of insanity; and in the Resolution on the report of 1892 the Inspector-General of Civil Hospitals was asked to enquire into some of the cases attributed to ganja-smoking, and to ascertain on what data this diagnosis was based. Mention was also made of the suggestion that it is as reasonable to suppose that excessive ganja-smoking may be due to insanity as that insanity may be due to excessive use of ganja. In dealing with the report of 1893, the Lieutenant-Governor observed that whenever a lunatic was reported by the police to be a ganja-smoker, it was too easily assumed that that drug was the cause of insanity; and he agreed with Dr. Harvey in thinking that in past years many cases had been attributed to ganja on most insufficient grounds. The question of the connexion between insanity and ganja has since been exhaustively examined by the Hemp Drugs Commission. The Commission found that in the great majority of cases the asylum statistics as to the supposed cause of insanity were based wholly on the descriptive rolls or similar papers received with the lunatics. For this reason, they set aside the statistics as quite untrustworthy; and undertook a special enquiry into all the cases admitted into asylums in India in 1892 and ascribed to hemp drugs. They did in fact on a larger scale and with more elaborate machinery what the Lieutenant Governor had asked the Bengal Inspector-General to do in 1893. The conclusions arrived at by them after a most exhaustive inquiry entirely bear out the impression, which Sir Charles Elliott had long ago formed from facts which came before him in the course of ordinary administration. The following statement summarises their results:—

	Number.	Percentage on admissions.
Cases admitted in 1892 ...	1,344	...
Cause of insanity shown as known ...	775	58
" " " " unknown ...	569	42
Cases attributed to hemp drugs ...	222	16·5
" accepted by the Commission as due to hemp drugs ...	61	4·5
"Mixed" cases (hemp only one of several possible causes) ...	37	...
Total cases held by the Commission to be more or less connected with hemp drugs...	98	7·3, or 12·6 on "known" cases.
Cases rejected by Commission ...	124	...

It appears from the report that the above figures, if taken by themselves, tend rather to exaggerate the part played by ganja in causing insanity. Thus among the 37 mixed cases, in which ganja ranks only as one among several possible causes, there were 7 into which heredity entered as a predisposing factor, 18 may have been due to alcohol, and three to dhatura; while out of the remaining 61 accepted as due to hemp drugs, there were 22 with regard to which no satisfactory evidence could be procured; and a great majority of the rest came from the lower orders of cultivators and labourers, about whom it was not easy to ascertain more than the fact that they indulged in ganja. Whether that habit was the cause or one of the causes of the insanity, or even whether it preceded the insanity was much more difficult to establish. Subject, however, to these deductions, the Commission accepted it as reasonably proved in the

absence of evidence of other causes that hemp drugs do produce insanity, though in far fewer cases than has hitherto been popularly believed. Sir Charles Eliott welcomes this conclusion, not merely as confirming an impression which he had already formed, but as tending to remove what has long been a blot on our management of asylums, and to bring about the separation and intelligent treatment of persons suffering from ganja insanity. For the Commission further show that the form of insanity thus caused is usually of a temporary character, and lasts for a shorter time than insanity arising from other causes. If in future Superintendents of Asylums study carefully the mass of information collected by the Commission on this subject, it may reasonably be hoped that substantial progress will be made in the diagnosis and curative treatment of cases of ganja insanity.

8. The improvement noticed last year in the health of the inmates of the asylums has not been maintained. The average daily number of sick rose to 55.41 from 49.25 in 1893, and the percentage of chronic invalids to average strength was 6.05, against 5.28 in the previous year. Dr. Harvey points out, however, that these figures are low when compared with the rates of admission to hospital among British and Native troops in India, which in 1893 were 100.4 and 82.9, respectively, excluding venereal diseases.

Moreover, the death-rate of 8.19 per cent. is slightly lower than last year's and compares favourably with all other asylum rates in India, except that of the North-West Provinces. The actual number of deaths fell from 77 to 75. Taking the individual asylums, it is observed that at Dullunda, Patna and Berhampore more patients were admitted into hospital than in 1893, while Dacca shows a decrease in this respect. At Dullunda, however, the increase of 57 includes 30 cases of mere debility without any definite disease. The increase of 11 at Patna is ascribed to the prevalence of bowel-complaints, while of the increase of 45 cases at Berhampore, 32 are accounted for by influenza, and the rest by fever being somewhat more prevalent than in 1893. The decrease of 89, or 36.47 per cent., at Dacca is explained by the fact that in the previous year 87 patients were admitted for influenza, while none suffered from this disease in 1894. There were two cases of cholera, apparently caused by drinking polluted water in the Dullunda Asylum, one of which indicated great carelessness on the part of the hospital attendants.

9. Seventeen cases of injuries and accidents are recorded as compared with 10 in 1893 and 11 in 1892. Eleven of these took place at Dullunda, of which 3 were assaults by lunatics on lunatics and 8 minor accidents. At Dacca there were two cases of fractured ribs caused by kicks from other lunatics, who had up to that time shown no tendency to violence. An epileptic was burned, and a woman sprained her hip. At Patna one lunatic was thrown down by another and broke his collar-bone, and a woman broke the small bone of her left forearm in trying to escape. The warders whose neglect contributed to these accidents were in each case adequately punished. At Cuttack and Berhampore there were no casualties. It speaks well for the management of the asylums that no cases of ill-treatment of lunatics by warders occurred during the year.

10. Three escapes took place—two from Berhampore and one from Dullunda. In all three cases the lunatics were recaptured, and the officials in fault punished.

11. The income and expenditure of the last two years, are shown in the following table:—

		Income.					
		1893.			1894.		
		Rs.	A.	P.	Rs.	A.	P.
1.	Received from Treasury	62,020	12	4	66,883	14	5
2.	Ditto paying patients	2,355	12	6	2,042	0	8
	Total	64,376	8	10	68,925	15	1
3.	Received from Manufacturing Department	16,273	14	4	14,415	4	3
4.	Received from Public Works Department, Medical Stores Depot and Stationery Office	6,138	13	3	12,447	8	11
	GRAND TOTAL	86,789	4	5	95,788	12	3

*Expenditure.*

	1893.			1894.		
	Rs.	A.	P.	Rs.	A.	P.
Establishment proper	16,629	2	8	16,415	7	5
Superintendence	16,586	3	10	17,598	0	6
Diet	36,155	11	7	35,813	7	11
Clothing and bedding	2,218	2	0	2,409	7	6
Bar medicine	85	0	4	59	15	3
Contingencies proper	4,947	7	1	5,183	1	2
Repairs and maintenance	527	4	8	834	10	1
Rates and taxes	3,414	7	0	5,537	1	6
Printed forms and stationery	121	11	1	124	8	6
English medicines	737	13	6	804	8	5
Public works	5,280	4	8	11,518	8	0
Total	86,789	4	5	95,788	12	3

The increase of Rs. 8,999 in the total expenditure is virtually accounted for by larger expenditure on account of buildings and repairs and the increased demand for rates and taxes, neither of which items, as Dr. Harvey points out, are under the control of the Asylum authorities. The Public Works Department spent Rs. 11,518-8 on asylums during the year, as compared with Rs. 5,280-4-8 in 1892, Rs. 2,536-10 in 1892, and Rs. 11,544-7-5 in 1891. The expenditure of 1894 included Rs. 5,074-12-9 at Dullunda for a new latrine and sewage connexions, and Rs. 3,366-14-3 at Dacca for raising part of the walls, improved ventilation, and a mortuary. The increase under rates and taxes was caused by demands appealed against as excessive in 1893 having to be met during 1894.

12. The expenditure under the large head of "Diet" shows a reduction of Rs. 342-3-8. The average cost of feeding patients was—Dullunda, Rs. 42-0-6; Dacca, Rs. 43-10-3; Patna, Rs. 35-5-11; Cuttack, Rs. 40-6-4; and Berhampore, Rs. 34-11-8, as compared with Rs. 41-9-5, Rs. 41-11-6, Rs. 32-3-2, Rs. 38-7-1 and Rs. 35-15-4 respectively in 1893. The slight increase at Dullunda was due to extra diet allowed to the large number of patients treated in hospital for debility. At Patna and Cuttack food grains are dearer, and the average at the latter asylum was further increased by the presence of a single Eurasian inmate.

13. The gross cost of each lunatic at the different asylums and the cost per head of average strength, taking all charges into account, is compared in the following statement for the last two years:—

	1893.			1894.		
	Rs.	A.	P.	Rs.	A.	P.
Dullunda	108	5	2	139	7	8
Dacca	93	6	8	104	12	0
Patna	78	0	10	82	13	7
Cuttack	106	7	9	182	0	3
Berhampore	81	6	9	83	10	3
Average cost in all asylums	93	1	11	104	10	6
<i>Details of cost.</i>						
Establishment	35	10	3	37	2	5
Diet	38	12	8	39	2	0
Clothing and bedding	2	7	9	2	10	2
Medicine	0	14	2	0	15	1
Contingencies and miscellaneous	5	13	9	6	0	5
	81	10	7	85	14	1
Public Works Department charges	5	10	8	12	9	4
Rates and taxes	3	10	7	6	0	9
Forms and stationery	0	2	1	0	2	2
	93	1	11	104	10	4

The causes of the increases shown have been explained above. The average cost at Cuttack, as was stated in the Resolution on the Report for 1893, is necessarily high owing to the small number of inmates.

14. The number of paying patients fell from 34 to 31, and the daily average strength from 19.57 to 18.06. The receipts decreased by Rs. 313-11 owing partly to the smaller number of patients and partly to a falling off in the collection of arrears.

15. Satisfactory progress seems to have been made in the working of dairy farms at asylums. From Dullunda a profit of Rs. 1,108-6-1 is reported, though it may be doubted whether in such an undertaking ten per cent. is a sufficient allowance to make for depreciation. The Dacca Asylum supplied its inmates, and sold milk to the public for Rs. 674-7-3. The calves were also utilised for supplying vaccino lymph to the asylum, the jail, and the outside population. The proposed dairy at Berhampore has not yet been opened. The Lieutenant Governor agrees with the Inspector-General in thinking that the Cuttack dairy, which works on a very small scale, may be given up, milk being procured for the lunatics from the Jail.

16. The number of patients in the European Asylum at Bhowanipour remained the same as last year. Forty-one were old patients, and 23 were subsequently admitted—64 in all, two being criminal lunatics. Four were discharged as cured, compared with 9 in the previous year, two deported to Europe under the Merchant Shipping Act, 11 transferred to the care of friends, one was made over to the military authorities, one transferred to Dullunda to make room for a more urgent case, and six died, leaving 39 under confinement at the close of the year. The daily average strength was 40.37, as compared with 36.78 in 1893. The male ward was slightly overcrowded for a time, but the greatest number detained on any one night was only two in excess of the scale capacity. Additional accommodation will be provided in the female ward as soon as funds are available. Only nine persons were admitted to hospital during the year; and although the death-rate rose from 10.87 to 14.87 per cent., no stress can be laid upon ratios where the total number of inmates is so small. Although the total expenditure of the year rose from Rs. 21,805 to Rs. 23,350, the average net yearly cost to Government of each lunatic, after deducting receipts from paying patients, was reduced from Rs. 295 to Rs. 210. This was mainly due to a rise in the amount received from paying patients from Rs. 10,875 in 1893 to Rs. 13,703 in 1894. At the same time the Government contribution, which in 1891 amounted to Rs. 15,541, or 61.21 per cent. of the total income, has fallen in the year under review to Rs. 9,624, or 41.21 per cent.

17. The rules for the control and management of the lunatic asylums in Bengal are still under the consideration of Government, and will be issued shortly. Opportunity will be taken to carry out the recommendations of the Hemp Drugs Commission in regard to a more careful and accurate diagnosis of the causes of insanity, especially when the disease is attributed to ganja-smoking, and to provide for the separation, as far as possible, of patients who are behaved to be suffering from this cause.

18. The Lieutenant-Governor has observed with pleasure that the Inspector-General of Civil Hospitals visited all the asylums during the year, and looked carefully into their requirements. With the single exception of Berhampore, where, owing to difficulties with the Municipal Commissioners, which have since been got over, the conservancy arrangements were defective, the sanitary condition of the asylums was found to be satisfactory. In other respects Dr. Harvey considered these institutions to be well and carefully managed, and to provide their inmates with comforts and means of recovery which they could not otherwise have. At the same time he was careful to deprecate any comparison with English asylums, which are in charge of specialists, giving their whole time to the treatment of mental disease, and are worked on a far more expensive scale than would be possible with the resources at the disposal of the Bengal Government. In conclusion Sir Charles Elliott desires to thank Dr. Harvey and the the Superintendents of the Asylums for their judicious and economical management of the institutions to which this excellent report bears witness.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

*Secretary to the Govt. of Bengal.*

# **RESULT OF EXAMINATION FOR ADMISSION TO THE EXECUTIVE BRANCH OF THE PROVINCIAL AND SUBORDINATE CIVIL SERVICE AND THE OPIUM DEPARTMENT.**

RESOLUTION.—No. 171A.—D.

APPOINTMENT.

*Dated Darjeeling, the 11th May 1895.*

READ—

The Resolution of the 12th May 1894, reviewing the result of the examination held in March of that year, and appointing candidates to be probationers in the Executive Branch of the Provincial and Subordinate Civil Service.

The Notification of the 6th November 1894, publishing rules for the examination for admission to the Executive Branch of the Provincial and Subordinate Civil Service of 1895.

The Notification of the 13th November 1894, declaring that one native of India, of unmixed descent, would be selected by competitive examination for admission into the Opium Department at the examination prescribed for candidates for the Executive Branch of the Provincial Civil Service.

The Reports of the Examiners at the examination held on the 1st, 2nd, 3rd and 4th April 1895.

The seven Probationary Deputy Collectors and 14 Probationary Sub-Deputy Collectors appointed on the result of the examination held in March 1894, have all been absorbed into officiating or substantive *pro tempore* appointments. The policy of promoting deserving Sub-Deputy Collectors to officiate as Deputy Collectors has been adhered to. During the year 1893-94, 16 Sub-Deputy Collectors, and during the year 1894-95 no less than 28 Sub-Deputy Collectors, have received promotion to the grade of Officiating Deputy Magistrate and Deputy Collector.

2. In November last it was notified, in the same way as had been done in previous years, that at an examination to be held in March 1895, seven candidates would be selected for Probationary Deputy Collectorships on a subsistence allowance of Rs. 50 a month, and seven for Probationary Sub-Deputy Collectorships on a subsistence allowance of Rs. 30 a month respectively. It was announced that four of the probationers for Deputy Collectorships would be appointed from the first four candidates on the list in order of merit, that three would be selected by the Lieutenant-Governor from amongst those who have obtained a minimum of one-third of the total marks, and that from the remainder of those qualified by obtaining one-third of the total marks, the Lieutenant-Governor would select seven more candidates as probationers for Sub-Deputy Collectorships. In the same month it was also notified that selected candidates would be allowed to compete at this examination for the Opium Department, and that the candidate who obtained the highest aggregate of marks would be admitted to that department.

3. The examination so notified was held on the 1st, 2nd, 3rd and 4th of April 1895. No fewer than 165 competitors obtained permission to compete,

and of these 165 (all of whom, except seven,\* were graduates) actually appeared and sent in papers. Of these 160 candidates, 115 took up Bengali as their vernacular, 36 took up Hindi or Hindustani, and 9 took up Uriya. It is a matter of regret that out of this large number of candidates, there should have been only 18 Muhammadans, 11 Bihari Hindus, and 9 Uriyas. These numbers show, however, an increase on the number of such candidates in previous years. The total number of candidates who obtained one-third marks was 108 only.

4. A consideration of the number of probable retirements and casualties, and of the number of vacancies which will be likely to be occasioned by the deputation of officers on settlement or other duty, has shown that 21 vacancies may be expected during the current year in the grades of Deputy Magistrate and Deputy Collector. Of this number seven will, in due course, be filled up by the appointment of candidates who are now selected to be Probationary Deputy Magistrates and Deputy Collectors, and the remaining 14 appointments will be filled up by selection from among Sub-Deputy Collectors. Assuming that three ordinary vacancies will be created in the grade of Sub-Deputies during the year, this decision enables the Lieutenant-Governor to raise the number of officers to be appointed as Probationary Sub-Deputy Collectors from among the candidates at the late examination from 7 to 17.

\* Of these seven, six failed to obtain one-third mark.

5. The following four gentlemen, who stood first in order of merit, are entitled to appointments as Probationary Deputy Collectors:—

	Number of marks.
Babu Kshitish Chunder Sarkar, B.A. ...	475
„ Probedh Chandra Chatterji, M.A. ...	449
„ Nund Kishore Lall, B.L. ...	434
„ Hai Bhushan De, B.A. ...	433

6. The following three candidates have been selected by the Lieutenant-Governor for appointment as Probationary Deputy Collectors after careful consideration of the number of marks obtained, the claims upon Government of members of the candidate's family, the interests of the different classes of the community, and the requirements of the public service:—

	Number of marks.
Mr. A. W. Warde-Jones ...	428
Maulvi Syed Ali Ashraf, B.A. ...	415
Mr. W. J. Stark, B.A. ...	373

7. All these probationary officers will receive a subsistence allowance of Rs. 50 per mensem, and if the report from the districts in which they are stationed is favourable they will, after such period of probation as may seem advisable, be appointed to be Officiating Deputy Magistrates and Deputy Collectors as vacancies occur. They will not ordinarily be vested with magisterial powers until they are so appointed. Separate orders will now be passed posting all the gentlemen above named to districts.

8. The following are the 17 candidates selected by the Lieutenant-Governor, from among those who have obtained one-third marks, to be Probationary Sub-Deputy Collectors:—

Babu Debendra Nath Bose, M.A.	Babu Akhil Kumar Chatterjee, B.A.
„ Jogindra Nath Sutar, M.A., B.L.	„ Saroda Nunda Das, B.A.
„ Monmohan Mukherjee, B.A.	„ Suresh Chunder Chuckerbutty, B.A.
„ Ramesh Chunder Dutt, B.A.	Maulvi Abdul Aziz, B.A.
„ Dakshinatanjan Ghose, B.A.	Babu Sudarsan Das, B.A.
„ Phanindra Nath Mukerjee, B.A.	Maulvi Syed A. M. Abdul Barkaat, B.A.
Maulvi Syud Izhar Hossain, B.A.	Babu Pal mukund Kanungo, B.A.
Babu Mohendra Nath Kundu, M.A.	„ Bhupendro Nath Mozumdar, B.A.
	„ Har Sahay Lall, B.A.

9. These probationary officers will receive a subsistence allowance of Rs. 30 per mensem at present, and will, if they are satisfactorily reported on, be gradually absorbed in the fourth grade of Sub-Deputy Collectors as vacancies occur. Separate orders will at once be passed posting them to districts.

10. In accordance with the notification of the 13th November 1894, already referred to, a competition was held at this examination for one probationary appointment in the Opium Department. The number of candidates for this appointment was eleven, of whom ten obtained one-third marks. The candidate who is highest on the list is Babu Abinash Chunder Roy, B.L., who obtained 414 marks and stood tenth in the combined list in order of merit. With reference to the result of the examination, the Lieutenant-Governor is pleased to direct that Babu Abinash Chunder Roy be appointed a Probationary Assistant Sub-Deputy Opium Agent of the fourth grade.

ORDER.—Ordered that the above Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,  
Chief Secretary to the Govt. of Bengal.

RESOLUTION ON THE BUDGET ESTIMATES OF THE  
COMMISSIONERS OF THE PORT OF CALCUTTA  
FOR THE YEAR 1895-96.

No. 965 Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Calcutta, the 10th May 1895.

RESOLUTION.

READ—

A letter No. 3211, dated the 19th March 1895, from the Vice-Chairman of the Commissioners of the Port of Calcutta, submitting for sanction the budget estimates of the Commissioners for the year 1895-96.

A general summary of the budget estimates submitted by the Commissioners is subjoined:—

REVENUE ACCOUNTS.			Estimate for 1895-96.	Estimate for 1894-95.
1			2	3
<i>Receipts.</i>			Rs.	Rs.
Part	I.—Jetties	...	13,43,250	13,13,350
"	II.—Inland Vessels Wharves	...	4,83,000	4,68,400
"	III.—Strand Bank Lands	...	1,68,815	1,68,815
"	IV.—Port or Harbour Master's Department	...	5,42,660	5,72,700
"	VI.—Tramway	...	3,00,000	2,90,000
"	VII.—Port Approaches	...	3,92,750	3,68,000
	Total	...	32,30,475	31,81,265
"	VIII.—Kidderpore Docks	...	4,00,000	2,70,100
	Total	...	36,30,475	34,51,365
	Special Toll	...	8,25,000	8,00,000
	Total	...	44,55,475	42,51,365
<i>Expenditure.</i>				
Part	I.—Jetties	...	10,31,011	10,43,539
"	II.—Inland Vessels Wharves	...	4,18,725	3,99,162
"	III.—Strand Bank Lands	...	1,07,613	1,02,316
"	IV.—Port or Harbour Master's Department	...	5,65,969	5,38,964
"	VI.—Tramway	...	2,56,553	2,52,681
"	VII.—Port Approaches	...	4,86,814	4,68,425
	Total	...	28,66,685	28,05,087
"	VIII.—Kidderpore Docks	...	19,97,082	16,30,153
	Total	...	48,63,767	44,35,240
	Special Toll	...	20,556	23,556
	Total	...	48,84,323	44,58,796

Estimated balance on 1st April 1895 ... Rs. 5,78,842

## RECEIPTS.

2. PART I.—*Jetties*.—The receipts are taken at Rs. 29,900 more than those of 1894-95. The increase is based on actuals.

3. PART II.—*Inland Vessels Wharves*.—The receipts are taken at Rs. 14,600 over last year's estimate. The increase is based on actuals.

4. PART IV.—*Port or Harbour Master's Department*.—The receipts are estimated at Rs. 30,040 less than those of the previous year. The estimate has been reduced on account of the receipts during the previous year having decreased by reason of vessels making shorter stays in the port.

5. PART VI.—*Tramway*.—The earnings are estimated at Rs. 10,000 more than those of the previous year. The increase is based on actuals.

6. PART VII.—*Port Approaches*.—The receipts are taken at Rs. 24,750 over last year's estimate. Judging from the actuals of the receipts from port-dues up to the end of January 1895, an increase of Rs. 25,000 is expected from this source, and hence the increase in the estimate.

7. PART VIII.—*Kidderpore Docks*.—The receipts are estimated as follows:—

	Rs.
Receipts from graving dock ... ..	1,00,000
Landing charges on imports } ... ..	2,50,000
Shipping charges on exports } ... ..	
Rent and miscellaneous ... ..	47,000
Proportion of receipts for towing vessels by hopper barges ... ..	3,000
Total ... ..	1,00,000

There is an increase of Rs. 1,00,000 in the receipts from landing and shipping charges and Rs. 32,000 in those from rent. In both cases the increase is based on actuals.

8. *Special Toll*.—The receipts for the 10 months, from April 1894 to January 1895, amounted to Rs. 6,50,700, and it was anticipated that those for February and March would be the same as those for the corresponding months of 1894, which amounted to Rs. 1,18,726. The receipts for 1895-96 have consequently been taken at Rs. 8,25,000.

## EXPENDITURE.

9. PART I.—*Jetties*.—The estimated expenditure amounts to Rs. 10,31,011 against Rs. 10,13,539 of the previous year. "Repairs to jetties, sheds, &c.," shows a decrease of Rs. 62,000, the amount provided for, viz., Rs. 55,000, having been considered sufficient for carrying out such repairs as are necessary. Under the head "Renewals and improvements" there is a decrease of Rs. 40,000, the only provisions made being those for the repairs and improvements of the Budge-Budge dépôt, and for protecting the foreshore. For these an estimate of Rs. 10,000 has been provided. On the other hand there is an increase of Rs. 7,471 under the head "Salaries," on account of an additional establishment having been sanctioned for supervising the handling of kerosine oil at Budge-Budge, as well as an increase of Rs. 61,616 under "Working expenses," owing principally to a provision of Rs. 60,216 having been made for the labour in handling kerosine oil at Budge-Budge.

10. PART II.—*Inland Vessels Wharves*.—Under this head there is an increase of Rs. 19,563 over the estimate sanctioned last year. This is principally due to an increased provision of Rs. 8,640 on account of "Renewals and improvements" and of Rs. 7,000 on account of the repairing of landing stages.

11. PART IV.—*Port or Harbour Master's Department*.—There is an increase of Rs. 27,005 under this head over the estimates of last year. Under the head "Salaries" there is an increase of Rs. 15,532, due principally to the grant of exchange compensation allowance, and under "Port Police establishment" there is an increase of Rs. 4,086, due partly to the same cause, and partly to the employment of an additional force at Watganj for maintaining order in the vicinity of the docks. "Pensions" also shows an increase of Rs. 4,663.

12. PART VI.—*Tramway*.—Under this head there is an increase of Rs. 3,872, due mainly to increased provisions on account of salaries and working expenses.

13. PART VII.—*Port Approaches*.—There is an increase of Rs. 18,389 under this head as compared with last year's estimate. "Salaries of officers and crew." shows an increase of Rs. 10,076, due principally to the grant of exchange compensation allowance, while the estimate under the head "Repairs to vessels" has been increased by Rs. 8,000 on account of a number of light vessels requiring a general overhaul during the year.

14. PART VIII.—*Kidderpore Docks*.—The expenditure under this head is estimated at Rs. 19,97,082, against Rs. 16,30,153, the estimate of last year. The increase is due principally to an increased provision of Rs. 50,446 having been made under "Working Expenses" in view of the anticipated increase of work at the Docks; of Rs. 20,007 under "Salaries of traffic establishment" on account of an increased establishment having been kept in anticipation of the development of traffic; and of Rs. 2,87,706 under "Interest and sinking fund on dock loan" for the payment of the sinking fund which fell due on the 1st April 1895.

15. Subject to the remarks contained in the foregoing paragraphs, the Lieutenant-Governor, in pursuance of the powers vested in him by section 71 of the Calcutta Port Act, 1890, approves the estimate of income and expenditure of the Commissioners for the year 1895-96.

By order of the Lieutenant-Governor of Bengal,

A. D. McARTHUR, *Lieut.-Col., R.E.,*  
*Offg. Secretary to the Govt. of Bengal.*

## WEATHER AND CROP REPORT.

*For the week ending the 13th May, 1895.*

**Burdwan.**—Rainfall at Sadar nil. Weather hot. Cultivation is going on. Rain is wanted. Common rice sells from 10 to 21 seers a rupee in the district.

**Midnapore.**—Rainfall nil. Weather seasonable. Ploughing going on. Sugarcane and indigo are promising. Common rice sells from 15 to 21 seers a rupee.

**24-Parganas.**—Rainfall at Sadar 09. Weather seasonable. No crops on the ground. Harvesting of *boro* (spring rice) completed. Ploughing going on for early crops. Condition of cattle good. Fodder and water sufficient. Rice sells at—

				Sis.	
Sadar	...	...	...	11 to 13	} per rupee.
Barasat	...	...	...	16	
Basirhat	...	...	...	20	
Diamond Harbour	...	...	...	15	

**Murshidabad.**—Rainfall 19. Weather hot and dry. Sowing of *bhadon* and winter rice continues. Rain much wanted. *Boro* (spring rice) being harvested. Fodder sufficient. Price of rice 16 seers a rupee.

**Khulna.**—Rainfall at Sadar 1.10. Weather hot. Cultivation of lands for *aus* and *aman* going on. Harvesting of *boro* (spring rice) still continues. Common rice sells from 18 to 24 seers a rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall 08. More rain wanted for the standing crops. Weather hot and cloudy. Common rice 16 seers a rupee. Pox among cattle still prevalent. Fodder and water sufficient.

**Rangpur.**—Average rainfall 14. Weather seasonable. Weeding of *aus* and jute in progress. Prospects fair. Common rice 10 to 16 seers per rupee. Cattle-disease in parts of district. Fodder sufficient.

**Pabna.**—Weather hot and sultry. Rain has done much good to the standing crops. Sowing of paddy and jute still continues. Common rice selling from 14 to 17 seers per rupee. Fodder and water-supply sufficient.

**Dacca.**—Rainfall 45. Weather hot. Prospects of crops good. Sowing of rice continues, and that of jute nearly finished. Common rice selling from 12 to 19 seers per rupee. No cattle-disease. Fodder available.

**Chittagong.**—Rainfall nil. Weather hot. Land is being cultivated for *au* crop. Prices daily rising. Health of cattle fair.

**Patna.**—Rainfall 65. Some injury done to the mango crop and also to the *rabi* crops harvested and stocked in *Khalihan* by the late rain and storm. Common rice selling from 17½ to 18 seers per rupee.

**Gaya.**—No rain. East winds and humidity prevail. Sugarcane doing well. No other crop on the ground. Prices about normal. Fodder and water sufficient.

**Champaran.**—Rainfall at Motihari 17. Weather hot. Opium weighments finished. Common rice selling at 16 seers a rupee.

**Darbhanga.**—The late rain has benefited the early rice and *mung*. Lands are being prepared for *bhadoi* sowings. Fodder for cattle sufficient. Prices remain almost stationary.

**Bhagalpur.**—Hot wind and cloudy weather. There was rain in the last week. Indigo, sugarcane and *cheenr* are doing well. Fodder and water sufficient. No cattle-disease. Common rice sells at 18 seers 11 chitaks per rupee.

**Purnea.**—Sowing of paddy and jute continues. The late rain has done much good to the indigo and paddy seedlings. Fodder and water sufficient. No cattle-disease. Common rice selling at from 17 to 22 seers a rupee.

**Cuttack.**—Rainfall slight. Weather cloudy. Ploughing for *beali* (early rice) and winter rice continues. Condition of cattle good. Fodder sufficient. Rice sells at from 11 seers 13 chitaks to 26 seers 4 chitaks per rupee.

**Hazaribagh.**—Slight showers throughout the district. Ploughing continues. Fodder sufficient except in Giridih, where more rain wanted. Prices stationary.

**General Summary.**—There were local showers during the week, but no heavy rain was reported except in Khulna and Patna. More rain is wanted in parts for ploughing and for early sowings. The sowing of jute and of *aus* rice still continues. The state of the young sugarcane and indigo crops is good. The harvesting of spring rice still continues in some districts. Cattle-disease is prevalent in Patna, but is said to be not of a destructive nature. It is still rife in Dinajpur and Rangpur. The price of common rice is generally reported stationary, but in Chittagong it is said to be rising.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,  
The 14th May 1895.

C. E. BUCKLAND,  
Secretary to the Govt. of Bengal.

## SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF APRIL 1895.

The most noticeable peculiarities in the weather of the past month have been—

1. Large differences of pressure have existed at times as compared with the normal. In the early part of the month there was, sometimes for days together, a large excess in Bengal and a moderate excess over the Bay so that the distribution was much more uniform than usual. Towards the end of the month a very different arrangement obtained, there being a large defect over Bengal and steep gradients over both the Bay and the province.

2. Temperature has generally been low, both during the night and the day. Defect in mean minimum temperature was fairly uniform, but the mean day readings are more than  $5^{\circ}$  below the normal in the western districts and elsewhere by amounts diminishing towards the east, where there was a small excess. The mean temperature for the month is therefore below the normal in all districts.

3. Owing to the uniform distribution of pressure, which generally obtained during the first three weeks of the month, winds were lighter than usual, but during the last week, when the pressure arrangement was reversed and gradients became steep, very strong winds continued for several days at the head of the Bay and in Bengal.

4. Thunder-storms were very frequent, as in the latter half of March, but with the same peculiarity that the rainfall due to them was much lighter than usual. Owing, however, to their frequent occurrence, the total rainfall has been considerable, and it is only at a few stations in the south of the province that the fall for the month is below the average.

5. As in the past two years, a cyclonic storm developed in the south of the Bay. There was an important difference this year, so far as Bengal is concerned, because the depression, instead of crossing the Burma coast, took a more northerly direction, passing close to Akyab and breaking up in the hilly region between Bengal and North Burmah. It was followed by very unsettled weather for some days in Bengal and Assam, and heavy rain fell in the eastern districts.

During the first week of the month ordinary weather prevailed. Pressure gradients were rather steeper than usual at that season because of a slight defect in Bengal, and excess in the south of the Bay. Temperature was normal or above except in the south-western districts, and occasional thunder-storms gave light showers of rain. The high pressure, which was such an important feature of the weather about the middle of the month, first began to develop on the 7th and succeeding days, but it was only temporary till the 13th when a rapid rise gave a large excess in North Bengal and Assam. This arrangement developed and remained with little change till it was upset by the approach of the cyclonic storm from the Bay on the 25th.

During the second week, while considerable pressure oscillations occurred, weather was not so settled. The wind circulation was irregular, and local storms occurred in considerable numbers in all districts, except Bihar and Chota Nagpur, where rainfall was all but entirely absent. Though the thunder-storms were frequent, the showers caused by them were light, except in East Bengal. A more decided result of these local disturbances was the low temperature which prevailed throughout the week, the effect being equally apparent by night and by day.

During the third week the weather conditions were unusual because of the large differences from the normal noticeable in pressure, temperature, &c., and also because of the steadiness with which these abnormal features prevailed from day to day. The pressure distribution was unusually uniform, and had a marked influence on the other meteorological elements. Easterly winds prevailed, and numerous local storms occurred, chiefly in the southern half of the province. Though the rainfall was not heavy, the air remained unusually cool except in the extreme north and east.

While pressure remained high in Bengal and the north of the Bay, slow downward changes led to the formation of a shallow low-pressure area in the south or south-west of the Bay. As the depression was at first very shallow and diffused, there was little likelihood of its giving rise to disturbed weather. But on the 22nd wind velocity increased in the south of Ceylon, and heavy rain was reported from Galle. The squally weather, which was then probably prevalent over the extreme south of the Bay, extended northwards, and on the 23rd was beginning to be felt in Burmah. The sea became rough at Diamond Island and on the Orissa coast, while a regular cyclonic circulation of winds prevailed over the Bay, as shown by the indraught across the coast at nearly all stations. On the 25th the disturbance was more concentrated, and was evidently moving in a north-easterly direction. There was a brisk fall of pressure in Bengal and over the Bay, and heavy rain had begun at Diamond Island. During the following day the movement of the depression was very rapid, and the centre crossed the coast near Akyab, where a gale blew for several hours on the night of the 25th. The fall of pressure was very rapid near the centre, as was shown by the changes both at Akyab and Chittagong. The fall at Chittagong on the 26th was a quarter of an inch, at Narayanganj  $\cdot 183$  inch; and though the fall at Akyab was a fifth of an inch, the rapid rise which follows the passing of a storm had been felt there for some hours.

Squally weather was general over the Bay and in Lower Bengal, but owing to the easterly motion of the disturbance, these squally conditions were of short duration. The rain squalls were felt while winds were easterly, and the north-westerly dry winds which soon followed gave fine weather over the north-west of the Bay and the greater part of Bengal, even while the storm was still raging in the north-east angle of the Bay. The disturbance broke up very quickly after the centre crossed the coast, and numerous thunder-storms occurred in the eastern districts, attended by heavy rain. The pressure distribution which remained after the depression disappeared was the reverse of what obtained a week before. While there was a rapid rise in East Bengal, there was a rapid fall in the western districts. A residual depression appeared over the south of Bihar and Chota Nagpur; and though its position oscillated from east to west, it remained over the province till the end of the month, and exercised an important influence on the weather during the last few days. The gradient was steep, and very strong winds prevailed. The thunder-storms on the east side of the area of lowest pressure kept the temperature several degrees below the normal, while the westerly winds in the western districts caused a great excess of heat, maximum temperature in places being as much as  $112^{\circ}$ .

**Pressure.**—In the early part of the month the pressure distribution differed very little from the normal. About the beginning of the second week high pressure began to develop over Bengal, but it gave way for a day or two, and ultimately became established about the 13th. During the ten days that followed readings remained unusually high, and the distribution was uniform both over the Bay and the province. On the 24th the advancing depression became felt, and till the end of the month there was defect of about as much as was the previous excess. The pressure arrangement has therefore been very different from that usual during April, and the long period of high readings in the middle of the month has had a sensible effect on the means which are above the normal by amounts varying from  $\cdot 02$  inch in Orissa to  $\cdot 05$  inch in North Bengal and Bihar.

**Temperature** has been unusually low over the whole province, with the exception of one rather important break towards the end of the month in Orissa, Chota Nagpur, and the adjacent part of South-West Bengal, where some stations recorded very high day readings and nights were considerably hotter than usual. The means, however, are below the normal in all districts. Defect is  $3\cdot 9^{\circ}$  in Chota Nagpur, nearly  $3^{\circ}$  in Orissa and South-West Bengal, over  $2^{\circ}$  in Behar,  $1\cdot 7^{\circ}$  in North Bengal,  $1\cdot 2^{\circ}$  in East Bengal, and nearly  $1^{\circ}$  in Assam. These defects diminish from the south-west towards the north-east—an arrangement which is largely due to the day temperatures, as the difference from the average minimum reading is much more uniform.

**Rainfall** has been well distributed both over the province and throughout the month. In the early part falls were light and scattered, but during the last three weeks frequent showers fell in all districts. After the cyclonic storm broke up on the 26th heavier rain fell in East Bengal and Assam. The fall for the whole month is above the normal at all stations except in part of Bihar and South-West Bengal, where there is a considerable deficiency. The districts where less than the usual fall has been received are—Hooghly, Howrah, 24-Parganas, Calcutta, Khulna, Saran, Champaran, Darbhanga and Purnea. The stations that have reported the heaviest falls are—Ghatong, Dacca, Mymensingh, Noakhali, Balasore, Sib-sagar and Silchar.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the month of April 1895:—

METEOROLOGICAL DIVISIONS.				TEMPERATURE.							RAINFALL.						
				Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month.	Of month.			Rainy days			Since 1st April 1895.

\* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for 4 years. The humidity of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean of the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question.

for the week ending Saturday, the 11th of May 1895.

last ten years. The variations are *negatives* when the mean of the week is less than the corresponding normal mean, and *positives* when greater. The numbers denoting cloud amount represent the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the numbers are the numerical average of the rainfall returned received in the district, i.e., from total rainfall at the sub-districts during the past ten years.

**Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 11th of May 1895.**

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY,  
THE 11TH OF MAY 1895.**

DURING the previous week weather was slightly disturbed in Bengal and thunderstorms occurred in all districts. The unsettled conditions moved westwards across the province, and at the beginning of the week under review were felt only in the western districts. Thunder showers were almost general in Bihar and Chota Nagpur during the first two days of the week, and caused a large fall of temperature, especially in the west of Bihar.

These disturbances were due to a shallow low pressure area which moved in a westerly direction and was felt more in the northern districts. As the recovery of pressure followed, fine settled weather became general, and temperature, which at the beginning of the week was below the normal except in the extreme east, slowly rose to its customary height, and by the end of the week was relatively high in all districts.

On the 5th, the first day of the week, a ridge of high pressure extended from North Bengal southwards over the central districts. Within this area pressure was in excess by more than 15 inch, while both to east and west of it the difference was smaller. Gradients were therefore much steeper than usual over Bihar and Chota Nagpur, and the distribution more uniform towards the south and east. The oscillations usual in settled weather occurred, but the excess which prevailed at the beginning of the week never altogether disappeared. A moderate fall prevailed on the 6th and 7th and was followed by a slow rise on the 8th. Pressure again fell on the 9th and rose on the 10th and 11th. These changes all began in the east and moved westwards. The rather uniform distribution which obtained during these days gave rise to light winds and almost cloudless skies. The rise of temperature, therefore, went on with little interruption following the waves of pressure from east to west, and by the end of the week there was excess in all districts, greatest in Bihar, North Bengal and Assam, where it varied from a little under 5° to nearly 7°.

*Pressure*—As stated above, waves of pressure passed from east to west during the week, giving rise to moderate changes. The distribution was always above the normal by varying amounts, and the means for the week are consequently in considerable excess. The smallest difference is in Assam and part of East Bengal, where it is less than 0.5 inch. In the other districts excess varies between 0.5 inch and 1 inch.

*Temperature*.—At the beginning of the week temperature was below the normal except in East Bengal and Assam, and defect increased towards the west. The wave of rising temperature moved slowly across the province, and it was not till near the end of the week that defect disappeared. The highest day temperature was experienced on the 11th in all districts except Assam and North Bengal, where it was on the 8th, and the lowest minimum readings were usually between the 6th and 8th. The mean difference from the normal is greatest in Assam and becomes less towards the west. There is excess of 2.8 in North Bengal, 1.8 in East Bengal, and almost normal values for South-West Bengal and Bihar. In Orissa and Chota Nagpur there is defect of 1° and 3° respectively.

*Rainfall*.—Except the showers in Bihar and Chota Nagpur on the two first days and scattered showers throughout the week in East and North Bengal, very little rain has fallen. The average falls are below the normal in all districts except Chota Nagpur, where rather more than the normal amount was received. The falls in Orissa and South-West Bengal are less than a tenth of the normal fall, in East Bengal about a fourth, and in North Bengal less than a half. Bihar received 5 inch as compared with a normal of 6.3 inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 11th of May 1895:—

METEOROLOGICAL DIVISIONS	TEMPERATURE.							RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.	Rainy days.			Since 1st of month.	Since 1st April 1895.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h., 10h. and 2h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

a, dew; t, thunder; <, lightning; d, drizzling rain.

### FINAL REPORT ON THE WHEAT CROP OF 1894-95 IN BENGAL AND BIHAR.

The following is published for general information.

C. E. BUCKLAND,  
*Secretary to the Govt. of Bengal.*

REVENUE DEPT.,  
*The 21st May 1895.*

### DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

#### *Final Report on the Wheat Crop of 1894-95 in Bengal and Bihar.*

Returns have been received from 27 districts in which wheat is grown in these Provinces, viz., from all the districts of the Patna, Bhagalpur, and Chota Nagpur Divisions, and from the Burdwan, Bankura, Birbhum, Nadia, Murshidabad, Rajshahi, Pabna, Rangpur, Darjeeling, and Faridpur districts.

*Character of the season.*—The character of the early part of the wheat season of 1894-95 was reviewed in the preliminary note on the wheat crop issued on the 30th January

1895. This period was marked by unusually late and heavy rainfall which lasted till the end of the first week of November, being particularly heavy in Bihar, Chota Nagpur, and North Bengal. From the second week of November, there was practically no rain until after the middle of January. In February, the rainfall was below the normal, except in the Patna Division, and in the second and in the third weeks of March light rain fell in most districts.

The area sown with wheat was somewhat curtailed on account of the continuance of the monsoon rains of 1894, and the crop seems to have been seriously affected by the absence of rain, from the second week of November to the middle of January. The rain which fell in the latter part of January and in February and March, though light, somewhat improved the prospects of the crop. Shahabad is the only district from which injury by blight is reported.

2. *Area cultivated*.—The estimates of areas sown with wheat, as reported in the preliminary forecast of the 30th January, have been modified by the District Officers of Shahabad, Bhagalpur, the Sonthal Parganas, Manbhum, and Rangpur. The total area, sown under wheat during the year under report, as shown in the appended return is 1,401,000 acres, against 1,552,600 acres as reported in the first forecast. The decrease is chiefly due to revision of estimates in the Sonthal Parganas and Manbhum. Owing to the same causes, the total estimates of normal area and last year's area have also been changed, respectively, from 1,843,800 and 1,583,800 acres, as shown in the first forecast, to 1,719,200 and 1,461,000 acres as now returned.

From column 5 of the appended statement, it will be seen that there is an estimated decrease of 4·10 per cent. in the area under wheat cultivation this year, as compared with that of last year. This decrease is due to the late monsoon rains of 1894 having interfered with sowing, as stated in paragraph 1 of this Note.

3. *Outturn*.—The Collectors of Shahabad, Patna, Bhagalpur, Purnea, the Sonthal Parganas, Rajshahi, and Pabna, and some of the less important wheat-growing districts, have reduced their estimates of this year's crop since they submitted their preliminary forecasts. On the whole, therefore, the outturn for these Provinces is now estimated at 13½ annas, as against 15 annas shown in the preliminary forecast for this year, and as against 12 annas estimated for last year's crop. The outturn of wheat in tons in these Provinces for the season 1894-95 is shown in column 9 of the attached statement to have amounted to 486,100 tons, against 458,900 tons in the previous year. The better outturn is due to the more favourable character of the latter part of the season.

4. Under orders of Government, an abstract statement showing the prices and general conditions of stocks of food-grains as reported by District Officers is annexed to this report.

5. The following summary of the harvests of the year

Final Report on the *bhadoi* crops of 1894, dated 11th December 1894.

Final Report on the winter rice crop of 1894, dated 5th December 1894.

Note on the *rabi* crops of 1894, dated 10th April 1895.

1894-95 has been obtained from the marginally-noted reports published by this Department:—

6. *Bhadoi crops*.—The season was favourable. The total area cultivated with food and non-food crops was returned as 15,682,100 acres, against 15,587,600 acres estimated to have been cultivated the previous year. A full average crop of 16 annas or more than a full average crop

was reported from 7 districts, crops varying from 8 annas to less than 16 annas were reported from 37 districts, and only from one district (Manbhum) was the crop reported to be less than 8 annas. Thirty-three districts reported the outturn to be better than that of 1893, four reported it to be equal, and eight reported it to be worse. The general yield of the bhadoi crops of 1894 was considerably better than that of 1893, being estimated at 16 annas, against 11 annas for the previous year.

7. *Winter rice crop of 1894.*—The season was very favourable to the cultivation and growth of the winter rice crop in most districts. The total area estimated to have been cultivated with winter rice was 31,388,600 acres, against 30,798,100 acres in 1893. Out of the 45 districts of these Provinces, 25 reported the crop to be a full average or better than a full average crop, 15 reported the crop as varying from 14 to 16 annas, and 5 from 12 to less than 14 annas. No District Officer returned less than a 12-anna crop. Twenty-nine out of the 45 districts reported a better outturn than that of 1893, 6 reported an equal outturn, and 10 districts reported worse crops. The general outturn of the winter rice crop for 1894 was estimated at 17 annas, against 16 annas estimated for the crop of 1893.

8. *Rabi crops of 1894-95.*—The area sown with *rabi* food-grains was returned as 9,206,300 acres, against 9,616,600 acres estimated to have been sown in the season 1893-94, the decrease being chiefly due to the heavy and late rainfall of the monsoon season of 1894. Only in 5 districts was the outturn of the *rabi* crop estimated to amount to 16 annas, 26 districts reported crops varying from 12 to 15 annas, 13 districts from 8 to 11 annas, and one district (viz. Pabna) returned a 7-anna crop. The mean outturn of the *rabi* crops for these Provinces was estimated between 13 and 14 annas, against the estimate of 12 annas for the previous year.

9. Taking into consideration all the harvests of the year, it appears that the yield of food-grains of the year in these Provinces has been above the average.

The yield of *rabi* food-grains is below the average, but this has been more than compensated for by the good outturn of the winter rice crop.

10. *Food stocks and prices of food-grains.*—The food stocks are reported to be plentiful in 17 districts, including seven districts of the Patna and Bhagalpur Divisions. In the remaining districts, the District Officers state that food-stocks are not plentiful or not generally plentiful.

In the fortnight ending 15th April 1895, the prices of common rice were lower in 44 districts than in the corresponding fortnight of 1894. In Rangpur only, a higher price prevailed. In all the 45 districts of these Provinces, the prices were lower than those prevailing in the fortnight ending 15th April 1893. The prices of wheat in the principal wheat-growing districts also ruled generally lower in the fortnight ending 15th April 1895 than in the corresponding fortnight of the preceding year. From the return of prices current on the 30th April 1895 in head-quarters bazars (published in the *Calcutta Gazette* of the 8th May 1895) it will be seen, that the price of common rice at the end of April ranged from 13 seers in Darjeeling to 21 to 23 seers in Manbhum. In 22 districts, common rice was selling at 14 to 17 seers per rupee; in 15 districts at 17 to 20 seers; and in 5 districts, viz.,

Bankura, Khulna, Balasore, Puri, and Manbhum, at 20 to 23 seers. Only in two districts, viz., Darjeeing and Rangpur, was the price dearer than 14 seers to the rupee.

11. *Wheat exports from Bengal and Bihar districts.*—There was a marked decrease in the rail-borne exports of wheat from Bengal and Bihar districts to Calcutta during

Exports of wheat from  
Bengal and Bihar  
districts to Calcutta  
during the nine  
months April to  
December.

the nine months April to December 1894, as will be seen from the figures quoted in the margin. The falling off was due to the poor outturn of the wheat crop of these Provinces during the year 1893-94, and to the short crops of the North-Western Provinces.

The 10th May 1895.

Final Report on the Wheat Crop in Bengal for the year 1894-95.

District.	ACREAGE.			OUTTURN IN TONS.										Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.	
	Of current year's crop.	Of previous year's crop.	Normal.	Percentage by which column 2 exceeds (+) or falls short of (-) area in		Taking 10 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1894-95)?	Taking 10 annas to represent the average outturn per acre, how many annas will represent outturn last year (1893-94)?	Estimated yield of current year, i.e., of area in column 2.	Yield of area in column 2 at full standard rate.	Yield of previous year, i.e., of area in column 3.	Normal.	Percentage by which column 10 exceeds (+) or falls short of (-) outturn in				
				Column 3.	Column 4.							Column 10.	Column 11.			Column 12.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	17	
Shahabad	115,500	116,500	173,000	-0.87	-33.23	10	54	30,200	41,500	56,700	74,800	-37.57	+18.60	-58.41	The prospects of the crop of the Sadar, Bhabua and Sasaram sub-divisions have improved since the submission of the first forecast. The crop of the Buxar sub-division was seriously injured by blight ( <i>harda</i> ). .....	The Collector has changed this year's and last year's areas under wheat from 1,23,400 and 118,900 acres to 115,500 and 116,500 acres respectively, and returned the average rate of yield as 160 lbs. per acre in place of 88 lbs. shown last year.
Patna	100,100	114,100	122,500	-12.27	-18.28	134	84	31,600	44,000	27,400	53,800	-28.18	+15.32	-41.45		
Gaya	26,800	180,600	157,600	-2.90	-19.60	11	11	98,900	55,700	80,400	69,200	-31.24	-2.79	-44.63	Both area and outturn were seriously affected by the prolongation of the rains, which delayed preparation of the lands and sowing of the seed to an unprecedented extent.	

DISTRICT.	ACREAGE.				OUTTURN IN TONS.										Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
	Of current year's crop.	Of previous year's crop.	Normal.	Column 3. Percentage by which column 2 exceeds (+) or falls short of (-) area in	Column 4. Percentage by which column 9 exceeds (+) or falls short of (-) outturn in	Estimated yield of current year, <i>i.e.</i> , of area in column 2.	Yield of area in column 2 at fall standard rate.	Yield of previous year, <i>i.e.</i> , of area in column 3.	Normal.	Column 10.	Column 11.	Column 12.	The following rates of outturn per acre have been assumed by the Collector in the present returns:—			
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
Saran	140,000	147,500	147,500	-5.08	-5.08	15	15	57,700	61,500	60,700	64,800	-6.19	-4.94	-10.95	.....	
Champanan	41,000	47,000	47,000	-0.13	-0.13	16	16	12,800	12,800	14,700	14,700	.....	-19.92	-12.92		The outturn is the same as was estimated in the preliminary forecast. Owing to late rains, the area sown is less this year.
Muzaffarpur	70,000	70,000	70,000	.....	.....	16	16	30,700	30,700	30,700	30,700	.....	.....	.....	.....	
Darbhanga	102,000	104,600	110,200	-2.48	-7.44	16	18	44,800	44,800	34,500	48,400	.....	+29.85	-7.44		Owing to the season being favourable, there has been no change in the outturn previously estimated.
Bhagalpur	192,200	192,200	215,500	.....	-1.08	15	14	73,500	80,700	75,500	90,800	-8.55	-2.25	-15.72		The Sub-divisional Officer of Supaul returned this year's outturn as 13 annas against 14 annas reported in the first forecast, and explained that it was due to want of timely rainfall.
																Per acre. Sadar ... 184 Banka ... 640 Madhupura ... 942 Supaul ... 960

Moult	106,800	106,500	103,000	+0.09	-34.60	13	14	33,000	46,500	40,000	71,000	-15.80	-7.00	-46.22	In Jamui sub-division only 100 acres more were sown than that of last year, and the outturn there is also reported to be 16 auras. In the other two sub-divisions, a larger area could not be sown owing to late rains, and on account of these late sowings, the outturn of the crop is less than what it was last year.
Purnea	23,000	22,700	24,000	+1.32	-4.16	14	13	9,500	10,100	9,100	10,500	-12.87	+8.04	-16.13	In the preliminary forecast, it was expected that the outturn of wheat would be an average one. The very scanty rainfall in January and February did scarcely any good to the standing crop, and the early setting in of high west winds materially affected the estimated outturn, which came down to 14 auras.
Sonhal gaus.	14,200	14,200	15,300	....	-4.05	13	11	3,500	4,300	3,000	4,700	-18.60	+16.68	-25.33	The Deputy Commissioner has revised estimates of former years which gave over 60,000 acres under wheat in the Sonhal Parganas.
Malda	42,000	42,000	55,500	....	-50.88	10	9	18,400	14,400	9,200	37,500	....	+100.00	-51.07	The area sown this year is less than the normal area owing to the absence of rain at the time of cultivation, and to heavy and late rainfall before sowing.
Burdwan	1,400	1,400	2,100	....	-33.33	10	10	300	500	300	800	-40.00	....	-25.00	In the Bardwan sub-division, owing to excessive rain, the condition of the crop is worse than it was last year. In the Kalna sub-division, heavy rainfall in November 1894 affected the outturn, and it will therefore be the same as was shown last year. Owing to seasonable rainfall at sowing time, the outturn in Katwa sub-division has been better than that of last year.

DISTRICT.	ACREAGE.				OUTTURN IN TONS.								Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.		
	Of current year's crop.	Of previous year's crop.	Normal.	Column 3.	Column 4.	Taking 10 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1894-95)?	Taking 10 annas to represent the average outturn per acre, how many annas will represent outturn last year (1893-94)?	Estimated yield of current year, i.e., of area in column 2.	Yield of area in column 2 at full standard rate.	Yield of previous year, i.e., of area in column 3.	Normal.	Percentage by which column 9 exceeds (+) or falls short of (-) outturn in				
												Column 10.			Column 11.	Column 12.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
Bankura	4.	5,900	4,900	6,500	+20.40	-21.61	13	12	1,900	2,300	1,400	2,500	-17.39	+35.71	-24.00	There is a slight decrease in the outturn of the crop as compared with the estimate given in the preliminary forecast. This is owing to deficient rainfall at the ripening season. The weather was not so favourable as to increase the outturn beyond the estimate of the preliminary forecast.
Birbhum	...	5,500	6,700	6,500	-3.51	....	12	12	1,600	2,100	1,600	2,100	-29.51	...	-23.81	The increase in the outturn, as compared with last year's, is due to favourable rain after sowings.
Hasaribagh	...	8,000	8,500	9,500	-5.98	-15.88	14	11	1,400	1,500	1,200	1,900	-12.50	+16.66	-26.32	The increase over the area sown in 1893-94, as a result in the outturn, is due to seasonable rainfall, but the decrease, as compared with the normal area, is owing to excess of moisture.
Lohardaga	...	1,800	1,100	2,200	+63.63	-18.18	10	7	200	400	100	400	-50.00	+100.00	-50.00	From what Mr. Bright (the late Deputy Commissioner) told me, I
Palamanu	...	18,900	17,700	19,000	+6.78	-0.53	16	12	5,600	6,000	3,900	5,600	....	+43.59	...	

have little doubt that the crop was in fact a full-blown one. The former estimates he figure in column 7 has not been altered, as nothing has transpired, since the submission of the 1532 and 1943.

have little doubt that the crops was in fact a full average one. The figure in column 7 has not been altered, as nothing has transpired since the submission of the first forecast. The average under wheat (730,000 acres) returned in the preliminary forecast is very high. Manthum is not a wheat-producing district, and a small area only is sown with wheat. But, as has just occurred, weathering Mr. Windson, (officiating Deputy Commissioner, Doty) this and accordingly the average was reduced in submitting the estimate of the feedgrains. When compared with the neighbouring districts of Bandura, Burdwan, Brahman, Lohardaga and Hazaribagh, it will be seen that the Manthum figures were too high higher than that of Malpau and Goompara which are wheat-producing districts. The average has therefore been reduced from 79,000 to 5,000 acres.

Since the submission of the preliminary forecast, the Sub-divisional Officer of Raigarhat has, after enquiry, increased the estimated outturn for his sub-division, while the Sub-divisional Officer of Kuchitla has reduced it. The district average, i.e., 10 annas, shown in the preliminary estimate, however, remains unaltered. Want of rain at the end of January and in February last much affected the outturn.

DISTRICT.	ACREAGE.			OUTTURN IN TONS.											Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.		
	(If current year's crop.	(If previous year's crop.	Normal.	Percentage by which column 2 exceeds (+) or falls short of (-) area in		Taking 16 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1894-95)?												
				Column 3.	Column 4.	Taking 16 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1894-95)?												
						5	6	7	8	9	10	11	12	13			14	15
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17		
Murshidabad.	122,244	128,709	150,500	-5.95	-12.16	13	10	36,200	47,000	39,000	57,500	-15.72	+23.02	-33.91	The increase in the outturn is due to heavy showers at the close of the rainy season which just suited the sowings.			
Rajshahi	75,400	54,500	54,500	-16.77	-10.77	13	12	24,200	24,000	25,000	32,500	-1.65	-3.20	-25.54	The difference in the outturn between this and the preliminary forecast is due to the fact that in Nocton, where an average crop was expected, the outturn was only 8 annas, owing to the retardation of the growth of the plant for want of timely rainfall. That the land remained moist for a long time, and no wheat could consequently be grown in proper time, also accounts for the shortness of crop in that subdivision.			
Pabna	15,450	24,106	25,000	-33.34	-33.04	10	5	3,700	5,000	4,000	5,000	-57.5	-15.24	-37.73	Want of winter rain materially affected the outturn.	The Collector has raised this year's area under wheat from 29,500 acres, as shown in the first forecast, to 32,700 acres, but has given no reason for the change.		
Rangpur	32,700	40,000	40,000	-18.25	-18.25	16	13	12,500	12,800	12,200	15,000		4.082	-18.56

*Abstract of the information regarding the prices and general condition of stocks of the supply of food-grains in the Province for 1894-95 as furnished by District Officers. (Circulars dated 7th and 14th March 1893, from the Revenue and Agricultural Department, India.)*

1	2	3	4	5	6	7
District.	Cause of extension of wheat cultivation in recent years.	Whether the produce of the year's supply of food-grains has been much above or much below the average.	Whether the food-stocks of the year's harvest are plentiful or not.	Whether the prices of food-grains in early June have been higher or lower than usual.	Wheat has been the cause of increase or decrease of exports of wheat, and how far has the movement been in the good or the scarcity of otherwise in food-grains.	Remarks by the Agricultural Department.
Burdwan	...	The produce of the year's supply of food-grains has been on average, more in the sub-division, and above the average in Kolha, Batwa and Kariganj subdivisions.	The food-stocks of former harvests are reported not to be plentiful in the Sahar, Kaba and Kawa subdivisions, but fairly plentiful in Ruriganj subdivision.	The prices of "duggars" generally have been higher, in the Sahar and Kaba subdivisions, but have generally ruled higher in the Kawa subdivision, while in Ruriganj they have ruled lower than in 1892-93 but higher than in 1891.	Very little wheat is cultivated in it is abundant, and what is cultivated is for home consumption and not for export.	
Bankura	...	Rice is the principal food-grain here. <i>Bhadra</i> rice, which is grown on river banks and high lands, is of a fine quality and is much in demand. It is also the principal food-grain for the population. It is also the principal food-grain for the population. It is also the principal food-grain for the population.	Fairly plentiful throughout the whole district. The Sub-divisional Officer of A. S. M. reports that the food-grains are plentiful in the whole district. The Sub-divisional Officer of A. S. M. reports that the food-grains are plentiful in the whole district.	There was a fall in the rice market throughout the year as compared with the year 1892-93. The prices of rice in the Sahar and Kaba subdivisions were higher in 1892-93 than in 1891.	Wheat is very sparingly grown in this district and is not a staple food-grain. It is also not a staple food-grain. It is also not a staple food-grain.	
Bidham	...	The produce of this year's supply of food-grains (chiefly rice) has been above the average.	Plentiful.	Slightly lower than in the previous two years, but higher than the average of the three years preceding 1892-93.	Wheat is grown in this district in a very limited area and is not exported.	
Muhafau	...	Above the average, except in limited areas where it was injured by floods.	Excellent at the Sahar and food-stocks of former harvests are not plentiful.	Lower than usual.	.....	
Hooghly	...	Above the average, owing to the favourable season in November.	Not very plentiful owing to the large export, but probably higher than for some years.	Lower than usual on account of good output this year.	.....	
Howrah	...	In exceptional area and in other two is low for average.	Not plentiful. The local produce is not sufficient to meet the whole year's requirements.	Lower than in last year.	.....	

1	2	3	4	5	6	7
District.	Cause of extension of wheat cultivation in recent years.	Whether the produce of the year's supply of food-grains has been much above or much below the average.	Whether the food-stocks of former harvests are plentiful or not.	Whether the prices of food-grains generally have risen higher or lower than usual.	What have been the causes of increase or decrease of exports of wheat, and how far has the movement been influenced by a scarcity or otherwise of food-grains.	Remarks by the Agricultural Department.
24-Parganas	...	Slightly above the average	Plentiful	Lower than usual	...	...
Khulna	...	Above the average	Not plentiful	Ditto	...	...
Nadia	...	Below the average	Ditto	Ditto	...	...
Jessore	...	The produce of the year's supply of food-grains was 17 annas.	Ditto	Ditto	...	...
Murshidabad	...	Slightly below the average	Ditto	Higher than usual	There has not been any perceptible increase or decrease in the export of wheat.	...
Dinaipur	...	Below the average owing to unsatisfactory culture of winter rice.	Not plentiful among the lower classes, but ample with the higher classes.	Gradually getting lower owing to diminution of exports.	...	...
Rajshahi	...	Fully an average one. The produce of rice has been more than average.	Not plentiful	Lower than in last year	The export of wheat in 1894 was 2,092 maunds against 25,231 maunds in 1893 and 24,754 maunds in 1892. There is no export of wheat from this district.	...
Rangpur	...	Below the average	Plentiful except at Kurigram to meet the local demands.	Higher	...	...
Bogra	...	The outturn of the <i>aus</i> crop was 8 annas against 10 annas of the previous year, but that of the <i>aman</i> crop was only about 19 against 18 annas of the year before. This bad result was due to deficient rainfall. Of the <i>rahi</i> crops, the pulse have been 10 annas against 16 annas of the previous year. On the whole, it would appear that, owing to deficient outturn of the <i>aman</i> rice which is the staple food crop of the district, the produce of the year's supply of food-grains was much below the average.	Scanty, a large quantity of the stock being usually sold and exported to other districts.	Not higher than usual. The prices of wheat, rice, mung, and gram in 1894-95 were 13 seers 15½ chittaks, 14 seers 3½ chittaks, and 12 seers 9½ chittaks, against 12 seers 11½ chittaks, 12 seers 9½ chittaks, and 11 seers 10½ chittaks in 1893-94, and against an average of last five years of 12 seers 15½ chittaks, 14 seers 6½ chittaks, and 14 seers 2½ chittaks respectively.	...	...

1	2	3	4	5	6	7
DISTRICT.	Causes of extension of wheat cultivation.	Whether the produce of the year's sowing of wheat has been much above or below the average.	Whether the food-stocks of former harvests are plentiful or not.	Whether the prices of food-grains generally have risen higher or lower than usual.	What have been the causes of increase or decrease of exports of wheat, and how far has the movement been influenced by a scarcity or otherwise of food-grains.	Remarks by the Agricultural Department.
Chittagong	.....	Much above the average	Small, as is usual in this district, much grain being exported.	Lower, owing to the abundance of the harvest.	.....	
Patna	.....	Above the average except in Barh, where the produce of supply of food-grains was normal.	Plentiful except in Barh	The prices of food grains have shown no variation in Sadar and Dinapore subdivisions. In Barh they have risen lower than usual and have been lower than the preceding year in Barh.	The increase of decrease in the export of wheat is said not to have been marked in Sadar and Bihar subdivisions. It was inconsiderable in Barh. No increase or decrease in Dinapore at all.	
Gaya	.....	Slightly below the average. The <i>khajura</i> and the <i>patia</i> crops were considerably below the average, but the main crop of the year, the winter rice crop, was above it.	The food-stocks of former harvests are not plentiful.	The prices of food-grains generally have risen much above the normal, but things slightly to low it.	The export of wheat during 1904-95 appears to have been the same as during 1903-04. There was no sign of scarcity during the year under review.	
Shehabad	.....	The produce of the north-western part of the district was about an average, that of the south-western part is reported to have been above the average.	Sufficient for requirements	Lower in Bihar and Sasaram, stationary at Abhoia and Arrah. The prices of most and also estimated higher than last year owing to their bad harvests.	The export of wheat during the year has decreased on account of the scanty harvests of the preceding year and in a part of the year owing to unsatisfactory harvests. No movement was, however, caused by the scarcity of food-grains or otherwise.	
Darbhanga	.....	A little below the average. During the year the <i>khajura</i> crops yielded an output of 16 annas in the Sadar subdivision, 14 annas in Saran and 12 annas in Madhubani or 14 annas for the whole district. There was an average return of 16 annas for the whole district has been estimated at 16 annas.	Not generally plentiful, and this is probably due to abnormal rainfall and floods, which have only affected the <i>dhadot</i> and winter rice crops.	The prices of common rice and <i>khajura</i> have fallen lower than in the preceding year. These of grain, wheat and <i>patia</i> were, however, throughout the year higher than in the previous year.	The cultivation of wheat is not largely carried on in the district, and the trade is generally carried on by its export is not carried on to any appreciable extent.	

[illegible]

1	2	3	4	5	6	7
DISTRICT.	Cause of extension of wheat cultivation in recent years.	Whether the produce of the year's supply of food-grains has been much above or much below the average.	Whether the food-stocks of former harvests are plentiful or not.	Whether the prices of food-grain generally have ruled higher or lower than usual.	What have been the causes of increase or decrease of exports of wheat, and how far has the movement been influenced by a scarcity or otherwise of food-grains.	Remarks by the Agricultural Department.
Maida ...	...	Average	Plentiful	Higher than usual	...	During the year under report, the export of wheat was on the decrease on account of its high price.
Southal garas.	...	Average in Dumka and Jamtara subdivisions. In Deogarh sub-division, the output of winter rice has been average and that of <i>bhadoi</i> and <i>wada</i> below the average; in Godda and Pakaur, it has been below and in Ramnagar above the average.	Not plentiful	Much as usual	...	The export of wheat was large at Godda, less than usual in Rajmahal and normal at Pakaur. Elsewhere there were no exports or imports to speak of.
Cuttack	...	Below the average. Winter rice 13 annas, <i>bhadoi</i> rice 11 annas, wheat 12 annas, barley 12 annas, summer rice 13 annas, gram 12 annas, and other <i>wada</i> pulses 14 annas. There would have been a bumper crop if winter rice had not been so late in the year, but the very high flood of July last did much damage to the crop.	Not plentiful	Higher than usual	...	...
Balasore	...	A little below the average	Not plentiful	...	...	...
Puri	...	Above the average	Fair in amount	...	...	...
Angul and Nandimala.	...	Much above the average	Not plentiful	...	...	...

Higher than usual during first-half of the year. Rice is the staple food of the district. The average price at which common rice was sold during each month of the year is shown below:—

	S. R.
April 1894	14 12
May	13 8
June	12 8
July	11 14
August	12 8
September	12 13
October	15 6
November	18 2
December	21 15
January 1895	22 10
February	22 6
March	24 5

High during the first eight months, but lower during the remaining months of the year.

Lower

Average up to date since last harvest of food-grains.

## REPORT ON THE STATE OF THE SALT MARKET FOR THE FOURTH QUARTER OF 1894-95.

No. 390B., dated Calcutta, the 11th May 1895.

From—N. K. Bose, Esq., Offg. Secretary to the Board of Revenue, L.P.,  
To—The Secretary to the Government of Bengal, Financial Department.

I AM directed to submit the following report on the state of the salt market for the fourth quarter of 1894-95, comprising the months of January, February, and March 1895.

SALT.

THE HON'BLE MR. D. R. LYALL, C.S.I.

2. The quantity of salt of every description cleared during the quarter under report amounted to 24,97,442 maunds against 24,25,413 maunds in the previous quarter and 27,29,108 maunds in the corresponding quarter of the previous year; and the amount of net duty levied thereon was Rs. 58,07,558 against Rs. 56,96,284 in the previous quarter and Rs. 63,17,446 in the corresponding quarter of the previous year. In all cases fractions are omitted.

3. The quantity of locally-made salt removed from the golas in Orissa during the quarter under review and the quantity which remained in store at the close of the quarter are shown in table I:—

TABLE I.

1			2	
			Puri.	
			Mds.	s.
Balance at the close of the previous quarter	...	...	1,88,651	0
Manufactured or added during the quarter	...	...	.....	
Total	...	...	1,88,651	0
Sales during the quarter	...	...	10,507	0
Wastage	...	...	1,240	0
Total	...	...	11,747	0
Balance at the close of the quarter	...	...	1,76,904	0

There was no salt in golas in the other two districts.

4. The total sale of locally-made salt during the quarter under review amounted to 10,507 maunds against 11,599 maunds in the previous quarter and 2,777 maunds in the corresponding quarter of the previous year. The total amount of locally-made salt on which duty was paid during the quarter was 10,507 maunds.

5. The subjoined table shows in detail the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter under review, compared with the figures of the corresponding quarters of the previous two years:—

8. The quantity of salt despatched by the East Indian Railway to the stations beyond Buxar during the quarter under review amounted to 2,999 maunds as noted in the margin, against 2,248 maunds 20 seers in the previous quarter and 4,122 maunds 10 seers in the corresponding quarter of the previous year.

	Mds. s.
January ...	1,124 10
February ...	874 50
March ...	1,500 0
Total ...	2,999 0

9. The quantity of saltpetre salt removed from the refineries on payment of duty amounted to 8,897 maunds against 3,782 maunds in the previous quarter and 10,648 maunds in the corresponding quarter of the previous year.

10. The shipments of Liverpool salt for the port of Calcutta according to published market reports were as follows :—

	Tons.
January ...	9,120
February ...	14,540
March ...	21,030
Total ...	44,690

No vessels are reported to be *en route* for Calcutta with salt from Hamburg during the quarter under review.

11. Table V shows the average wholesale price per 100 maunds of Liverpool and other descriptions of salt during each fortnight of the quarter :—

No transactions of sea-imported salt have been reported for the quarter from the ports of Cuttack and Puri.

**LIBERALITY OF MUSSAMAT KAZIMAN.**

GENERAL DEPARTMENT—EDUCATION No. 1794.

*Calcutta, the 21st May 1895.*

## RESOLUTION.

READ—

A letter from the Commissioner of the Patna Division, No. 650G., dated the 13th November 1893, and its enclosure, regarding an endowment offered by Mussamat Kaziman.

Read also—

Letters from the Director of Public Instruction, Bengal, No. 688, dated the 30th January 1894, and 269T., dated 2nd May 1895, reporting on the above.

Mussamat Kaziman, widow of the late Kazi Syed Reza Hossein, Khan Bahadur, of Patna, has offered to create an endowment of Rs. 10,000 with a view to promoting the education of Muhammadan students in Bihar. It is proposed that half the proceeds of the sum assigned should be devoted to the Patna Collegiate School, and half to the Muhammadan Anglo-Arabic School, Sadikpur, for the education and benefit of Muhammadan students who are Bihari by birth, and who though poor are of gentle birth. It is further proposed that the amount to be awarded to any student should be settled by the trustee of the endowment fund, having regard to the circumstances of the student. Mussamat Kaziman will retain the management of the endowed property during her lifetime, and desires that the Government of Bengal should assume the trusteeship on her demise.

2. The Lieutenant-Governor is pleased to accept the endowment, and desires that the thanks of Government be conveyed to Mussamat Kaziman, widow of the late Kazi Syed Reza Hossein, Khan Bahadur, for her public spirit and liberality.

ORDER.—Ordered that a copy of the Resolution be forwarded to the Commissioner of the Patna Division for information and for communication to the donor, and that a copy be forwarded to the Director of Public Instruction, Bengal, for information.

Ordered also, that a copy of this Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

*Secretary to the Govt. of Bengal.*

## WEATHER AND CROP REPORT.

For the week ending the 20th May, 1895.

**Burdwan.**—Rainfall at Burdwan .17. Weather very hot. Lands are being cultivated. Rain wanted. Sugarcane and *til* (sesamum) are doing well. Common rice sells from 10 to 21 seers per rupee in the district.

**Midnapore.**—Rainfall .38. Weather hot. More rain wanted for ploughing. Want of drinking water is felt in Contai. Sugarcane, indigo and *til* (sesamum) promising. Tobacco doing badly. Rice selling from 16 to 21 seers per rupee.

**24-Parganas.**—Rainfall at Sadar .04. Weather seasonable. Prospects fair. Sowing of jute and *aus* commenced. Cattle-disease reported from the Diamond Harbour sub-division. Fodder and water sufficient. Rice sells at—

	Srs.	
Sadar	11 to 13	} per rupee.
Barasat	16	
Basirhat	20	
Diamond Harbour	15	

**Murshidabad.**—No rain. Weather very hot. Sowing of *bhadoi* and winter rice continues. Rain badly wanted. Indigo, *til* (sesamum) and mulberry doing well. Fodder available. Price of rice 15 seers a rupee.

**Khulna.**—Rainfall at Khulna .48. Weather hot. Cultivation for *aman* and *aus* paddy going on. Rain wanted at Satkhira. Harvesting of *boro* (spring rice) still continues. Common rice sells from 17 to 24 seers a rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall .76. Weather hot and cloudy. Standing crops good. Price of common rice 16 seers a rupee. Pox among cattle abating. Fodder and drinking water sufficient.

**Rangpur.**—Average rainfall 2.59. Weather hot and seasonable. Condition of crops satisfactory. Cattle-disease in the Nilphamari sub-division has abated. Fodder available. Price of common rice 12 to 13 seers per rupee.

**Pabna.**—Rainfall 1.23. Weather hot and windy. Sowing of *aus*, *aman*, jute and sugarcane going on. Common rice selling at 17 seers per rupee. Fodder and water-supply sufficient.

**Dacca.**—Rainfall .07. Weather very hot. Rain wanted. Prospects of crops good. Common rice selling from 12 to 20 seers per rupee. No cattle-disease. Fodder available.

**Chittagong.**—Rainfall .35. Weather seasonable. Cultivation for *aus* progresses. Prices slightly risen. Health of cattle fair.

**Patna.**—Threshing of *rabi* completed. *Cheena* and sugarcane promising. Common rice selling from 17½ to 18 seers per rupee.

**Gaya.**—Rainfall at Sadar .35. Sugarcane doing well. Mango much damaged by wind. Prices about normal. Fodder and water sufficient.

**Champanan.**—Rainfall at Motihari 1.18. Weather hot. Common rice selling at 16 seers a rupee. Fodder and water for cattle sufficient.

**Darbhanga.**—Weather very hot. Early rice coming on well. Lands are being prepared for *bhadoi* sowings. Fodder and water sufficient. Prices almost stationary.

**Bhagalpur.**—Heat more than usual. *Bhadoi* sowings in progress. Indigo and sugarcane doing well. Fodder and water sufficient. No cattle-disease. Common rice sells at 18 seers 2 chitaks per rupee.

**Purnea.**—*Bhadoi* and *aghani* sowings continue. Sugarcane, indigo and other crops doing well. Recent rain beneficial. Fodder and water sufficient. No cattle-disease. Common rice selling from 16 to 20 seers a rupee.

**Cuttack.**—Rainfall 1.02. Weather hot. Sowing of *beali* and *sarad* rice commenced. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 26 seers 4 chitaks per rupee.

**Hazaribagh.**—No rain at Sadar; showers at Giridih .64. Weather hotter. Ploughing continues. Prices stationary. Fodder available.

**General Summary.**—There was general rain in North Bengal; elsewhere local showers are reported. The ploughing of the land and the sowing of the *bhadoi* crops are in progress, but more and general rain is required, especially in the Central districts of the Province. *Aus* rice and jute are still being sown. Indigo, sugarcane and other standing crops are doing well. Cattle-disease in Dinajpur and Rangpur has abated. It has appeared in the Diamond Harbour sub-division. The price of common rice continues almost stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,  
The 21st May, 1895.

C. E. BUCKLAND,  
Secretary to the Govt. of Bengal.

# SUPPLEMENT TO THE CALCUTTA GAZETTE, MAY 22, 1895.

The following Statement shows the Quantities of the Principal Staples of Traffic imported into Calcutta from the Inter during the month of February, 1895.

last ten years. The variations are negative when the mean of the week is below the corresponding normal mean, and positive when greater. Numbers denoting cloud amount represent the part of the sky covered, the whole sky being divided by 10. Under the head District observations are given the normal means for the week ending Saturday, the 18th of May 1895. The means of the district are the numerical averages of the means returned received in the district, i.e., from total rainfall at the sub-stations during the past ten years.

## Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 18th of May 1895.

Meteorological divi- sion.	Division.	District.	Station.	RAINFALL.							Total number of rainy days.	Rainfall of week.	Average rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 16th May 1895.	Average rainfall from 16th May to date.	
				Sunday, 12th.	Monday, 13th.	Tuesday, 14th.	Wednesday, 15th.	Thursday, 16th.	Friday, 17th.	Saturday, 18th.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY,  
THE 18TH OF MAY 1895.**

At the beginning of the week the pressure distribution was almost normal, and a light circulation of winds, such as prevails in the middle of May, obtained. The general direction was southerly in Lower Bengal and easterly in the northern districts. Temperature, however, was considerably above the normal in the northern and central districts, and almost normal in Chota Nagpur and part of Orissa. Throughout the week there has been a steady downward tendency of pressure; but as these changes have been fairly uniform, the distribution over the province has undergone but little modification. The changes over the Bay have been of greater importance, and by the end of the week led to steep gradients and strong westerly winds over the southern part between Ceylon and Burmah. Owing to the light nature of the wind circulation, the slight variations of the pressure distribution were followed by occasional changes in the wind directions from south-west to south-east, and gave rise to local storms, more especially in the western districts. These storms occurred generally about the 12th and 13th, and again between the 15th and 17th except in North Bengal and Cachar, where rainfall was more frequent and heavy. The weather being generally settled and the sky free from clouds during the day, high temperature has prevailed. There was moderate defect in Orissa, Chota Nagpur, and part of Bihar in the early part of the week when local storms were occurring in these districts, but elsewhere excess of rather variable amounts continued from day to day during the week, the maximum difference from the normal being very rarely more than 5°. Thus the weather of the week has been characterised by falling pressure, increasing temperature, and almost normal rainfall in the western and central districts. In East Bengal and North Bengal the rainfall distribution is abnormal in there being considerably less than the usual amount in East Bengal and considerably more in North Bengal.

**Pressure.**—As stated above, pressure was nearly normal at the beginning of the week, there being excess of less than .05 inch. A moderately quick fall was then general, the change diminishing towards the south. This continued during the first half of the week, after which there was a slow rise for two days, but the fall began again on the 17th and continued till the end of the week. Readings were about a fifth of an inch lower at the end of the week than at the beginning; but as the change had been uniform over Bengal and the north of the Bay, the distribution in these parts was practically the same. In the south of the Bay gradients were much steeper. The mean pressure for the week is below the normal everywhere by amounts varying between .06 inch and .08 inch.

**Temperature** has been high, except in the south-western districts in the early part of the week. The highest temperature recorded in Bihar was 108°, and in South-West Bengal, Orissa, and Chota Nagpur between 104° and 105°. These high readings occurred on the 18th, the last day of the week. Mean temperature is practically normal in Orissa and Chota Nagpur, and above in the other districts by 2° in East Bengal and Bihar, 1°·6 in South-West Bengal, 3° in North Bengal, and nearly 4° in Assam.

**Rainfall.**—Scattered showers have fallen in all districts, more frequently on the 12th and 13th and on the 15th and 16th. In the Jalpaiguri, Darjeeling, and Cooch Bihar districts of North Bengal rain has fallen almost daily. The average fall has been very uniform, and is about .7 inch except in North Bengal, where it is 2·08 inches. South-West Bengal and East Bengal have received less than the normal fall, and the other districts more, especially North Bengal, where excess is .7 inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 18th of May 1895:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.				Average mean of week above or below normal mean of week.	Of week.			Average number in week.	Rainy days.		Since 1st of month.	Since 16th May 1895.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.	Average.		Normal average.	Variation.	Normal average num-ber in week.		Variation.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; t, thunder; <, lightning; d, drizzling rain.

### WEATHER AND CROP REPORT.

*For the week ending the 27th May, 1895.*

**Burdwan.**—Rainfall at Burdwan 1.48. Weather very hot early in the week, stormy latterly. Cultivation going on. More rain wanted. Fodder and water sufficient. Common rice sells from 10 to 21 seers a rupee.

**Midnapore.**—Rainfall .16. More rain wanted. Want of drinking water felt in Contai. Weather hot. Indigo, sugarcane and *til* (sesamum) promising. Tobacco and *jara* growing badly. Common rice selling from 16 to 22 seers per rupee.

**24-Parganas.**—Rainfall at Sadar 1.10. Weather seasonable. Sugarcane and jute where sown require more rain. Sowing of *aus* and jute continues. Sowings delayed for want of rain. Some cattle-disease reported from Diamond Harbour. Fodder sufficient. Scarcity of water felt in Sonarpur and Bistapur thanas. Rice sells at—

	Srs.
Sadar	11 to 13
Barasat	16
Basirhat	20
Diamond Harbour	15

} per rupee.

**Murshidabad.**—Rainfall 0.81. Weather very hot. Sowing of *bhadoi* and planting of sugarcane finished. Indigo, *til* (sesamum) and mulberry doing well. Harvesting of *boro* (spring rice) continues. Fodder available. Price of common rice 15 seers per rupee.

**Khulna.**—Rainfall at Khulna 3.15, Bagerhat 3.19, Satkhira 4.21. Weather hot. Cultivation of lands for *aus* and *aman* going on. Harvesting of *boro* (spring rice) over. Common rice sells from 17 to 24 seers per rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall .7. Weather hot and cloudy. Standing crops good. Price of common rice 16 seers a rupee. No cattle-disease, nor any complaint for fodder or drinking water.

**Rangpur.**—Average rainfall .48. Weather hot and cloudy. Weeding still going on and prospects favourable, but more rain wanted. Supply of fodder sufficient. Rice selling from 10 to 15 seers a rupee.

**Pabna.**—Rainfall 4.30. Weather hot, cloudy and rainy. Jute and rice growing well. The heavy rain has done much good. Common rice selling at Pabna 16 seers and at Sirajganj 14 seers per rupee. Fodder and water ample.

**Dacca.**—Rainfall 3.36. Weather stormy with heavy rain at intervals. The rain has done much good to the standing crops. Common rice selling at 19 seers per rupee. No cattle-disease. Fodder available.

**Chittagong.**—Rainfall 5.13. Weather hot. Cultivation for *aus* progresses. Prices have slightly risen. Health of cattle fair.

**Patna.**—Hot air charged with moisture. *Cheena* and sugarcane doing well. The former is being harvested in places. Lands are being prepared for *bhadoi* crops. Common rice selling from 17 to 18 seers per rupee.

**Gaya.**—Rainfall nil. Sugarcane doing well. Prices about normal. Fodder and water sufficient.

**Champaran.**—Rainfall at Motihari 1.30. Weather hot with strong east wind. Common rice selling at 16 seers a rupee. Fodder and water for cattle sufficient.

**Darbhanga.**—Weather very hot. Rain wanted for early rice and *mung*. Lands are being prepared for *bhadoi* sowings. Fodder for cattle sufficient.

**Bhagalpur.**—It rained on 25th instant. Weather cool. Indigo, sugarcane and *cheena* are prospering. Common rice selling at 17 seers 10 chitaks per rupee. No cattle-disease. Fodder and water plentiful.

**Purnea.**—Rainfall .51. Weather hot and cloudy. Sowing of *bhadoi* rice and jute nearly completed. *Aghani* sowing still going on. Indigo and other crops doing well. Fodder and water sufficient. No cattle-disease. Common rice selling from 16 to 18 seers a rupee at Sadar.

**Cuttack.**—Rainfall nil. Weather hot with strong wind. Sowing of *beali* and *sarad* rice going on. Some deaths of cattle from *kimrhia* disease reported. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 23 seers 10 chitaks per rupee.

**Hazaribagh.**—Weather very hot. Sugarcane doing well. Mango indifferent. Ploughing in progress, but more rain wanted. Fodder and water scanty. Price of common rice 13 to 18 seers per rupee at Head-quarters and 10 to 16 seers at Giridih.

**General Summary.**—There was abnormal heat during the week followed by rain in almost all reporting districts except in Cuttack, Hazaribagh and parts of Bihar. The rain was heavy in the eastern and in some of the central districts. *Aus* rice and jute are still being sown, and the preparation of the land for the sowing of other *bhadoi* crops is in progress, but more rain is required in parts of the province. Prospects of sugarcane, indigo and other standing crops are favourable. The mango crop in Hazaribagh is said to be indifferent. Cattle-disease is still prevalent in Patna, and cases are also reported from Cuttack and the Diamond Harbour subdivision. The price of common rice continues steady.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,

The 28th May, 1895.

C. E. BUCKLAND,

Secretary to the Govt. of Bengal.

The mean temperature of the seven days ... .. 89.4

The average temperature of the corresponding period for 24 years, Surveyor-General's Office ... .. 86.9

The extreme variation of temperature ... .. 34.8

The maximum temperature ... .. 107.2

The highest velocity of the wind in one hour ... .. 20

The mean relative humidity ... .. 73

The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office ... .. 74

The total fall of rain from 19th to 25th May 1895 ... .. 1.10

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. 1.00

The total fall from 1st January to 25th May 1895 ... .. 4.37

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. 8.31

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; t, thunder; <, lightning; p, passing temporary showers.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

Calcutta, the 27th May 1895.

J. H. GILLILAND,

For Meteorological Reporter to the Govt. of India.

*Explanation.—Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the The humidity of the air here is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean at the numerical mean of average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question station in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

last ten years. The variations are *negative* when the mean of the week is less than the corresponding normal mean, and *positive* when greater. The number denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal number of inches of rain received is given, and under the head Subdivisional observations the actual amount received in the district, i.e., from total rainfall at the subdivisions.

## Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 25th of May 1895.

SUNDAY, 25th of May 1895.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0.10 inch of rain has fallen.

CALCUTTA, the 28th May 1895.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY,  
THE 25TH OF MAY 1895.**

The weather during the past week has been unusual because of the very high temperature which has prevailed in the west and centre of the province with but little interruption. Rainfall has been very light and scattered in Orissa, Chota Nagpur, and Bihar, and even in North Bengal there has been considerably less than the average, but fairly heavy falls have been general in East Bengal, Assam, and the eastern half of South-West Bengal.

At the beginning of the week conditions were somewhat unsettled over the Bay, though no definite storm had developed. For some days previous gradients were becoming steeper in the south, and probably a depression, though shallow, existed in the north of the Bay, as readings were very uniform round the coast. If such a depression was there, its influence on the wind circulation was very slight, as the south or south-west winds continued on the Orissa coast, and it was only at Akyab, Chittagong, and Noakhali that directions became northerly. Pressure was steadily falling in Bengal and the north of the Bay, and a rise had commenced in the south-west, being shown by the changes on the Madras coast. This rise spread very rapidly over the Bay. On Monday, the 20th, there was a rapid rise at the Burma stations, and a slow to moderate rise at the other coast stations, while inland there was a slow fall. The effect of these changes was to transfer the steep gradients northwards and to cause a shallow depression to show over Bengal, where readings were a fifth of an inch below the normal. Westerly winds prevailed in the west and centre of the province, and it was owing to this hot westerly wind that temperature rose so rapidly at many stations in Orissa, Chota Nagpur, and South-West Bengal. The rise of pressure continued on the 21st rapidly in Burma and Arakan, and at a diminishing rate towards the north-west. The area of lowest pressure was, therefore, forced westward, and the westerly winds were confined to Orissa and Chota Nagpur. The rainy weather which followed the slight disturbance in the east of the Bay slowly extended northwards, causing the heavy rain in East Bengal and Assam, and in parts of North and South-West Bengal. On Wednesday, the 22nd, there was again a more rapid increase of pressure in the east than in the western districts, and gradients were steep from east to west. This distribution caused strong southerly and easterly winds in all districts except Orissa and Chota Nagpur, where the hot westerly winds continued. Thunderstorms became more general, and led to a large reduction of temperature. On the 23rd mean temperature was below the normal in the greater part of Assam, Bengal, and Bihar, but there was still a large excess in Orissa and Chota Nagpur. The distribution of pressure was then very nearly normal, but there was excess in the east and defect in the west, so that gradients were still steeper than usual. On the 24th thunderstorms were again confined to the eastern districts, but on the 25th they became fairly general, and comparatively cool weather prevailed except in Orissa and Chota Nagpur.

During these last two days a fall of pressure over Bengal and a rise over the Bay caused still steeper gradients in the north of the Bay, and strong winds developed on the Orissa and Bengal Coasts as well as to a considerable distance inland.

*Pressure.*—During the early part of the week pressure was largely below the normal in Bengal, but the rise which began in the south of the Bay and spread northwards continued from the 21st to the 23rd, after which readings were about  $\cdot 05$  inch above the normal in the east and the same amount below in the western districts. Changes were very slight on the 24th, and there was a brisk fall on the 25th. Means are below the normal at all stations by amounts generally between  $\cdot 07$  inch and  $\cdot 1$  inch.

*Temperature.*—Has been unusually high at times in the central districts, and almost without a break in Orissa and Chota Nagpur. A rapid rise occurred about the beginning of the week in consequence of an influx of hot westerly winds, which penetrated as far as North Bengal. The highest maximum temperature recorded was  $114^{\circ} 4'$  at Midnapore on the 21st. On the same day the following places had a day temperature between  $110^{\circ}$  and  $113^{\circ}$ :—Raniganj, Bankura, Krishnagar, Gaya, Dohri, Arrah, Naya Dumka, Cuttack, Bilasore, and Chaibassa. Easterly winds caused a fall on the following day, and local storms led to a still further reduction, so that during the middle and end of the week the difference from the normal was not large except in Chota Nagpur and Orissa, where excess still prevailed. Mean excess in Chota Nagpur is  $4^{\circ} 7'$ , in Orissa and South-West Bengal  $4^{\circ}$ , in Bihar nearly  $3^{\circ}$ , and in Assam and North Bengal about  $1^{\circ} 5'$ . In East Bengal, where rainfall has been much more general and constant than in the other districts, there is a small defect.

*Rainfall.*—Almost general rain has fallen in the Darjeeling and Kuch Bihar districts, and with the exception of the first two days of the week in East Bengal and the adjacent parts of South-West and North Bengal. Showers were common in all districts except the extreme west on Thursday, the 23rd, and again on the 25th, when it extended over North Bihar. The districts where very little rain has fallen during the week are—the Patna, Gaya, Shahabad, and Saran districts of Bihar, and the greater part of Orissa and Chota Nagpur. The average falls are above the normal in East and South-West Bengal, and below in the other districts by  $\cdot 86$  inch in Orissa,  $\cdot 61$  inch in Chota Nagpur,  $\cdot 52$  in North Bengal, and by  $\cdot 36$  inch in Bihar.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 25th of May 1895 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1895.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

### FINAL REPORT ON THE OILSEED CROPS OF BENGAL, 1894-95.

The following is published for general information.

C. F. BUCKLAND,

*Secretary to the Govt. of Bengal.*

REVENUE DEPT.,  
The 1st June 1895

### DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

#### *Final report on the oilseed crops of Bengal, 1894-95.*

*N. B.*—Returns have been received from all districts in these Provinces except Palamau.

1. *Explanatory.*—The oil-seed crops included in this report are:—(1) linseed, (2) rapeseed and mustard, (3) the *rabi* or summer variety of *til*, and (4) other oilseeds, *e.g.*, castor-oil, *sorguza* (niger-oilseed), &c. The *bhadoi* variety of *til* has been excluded from this report.

2. *Character of the season.*—The character of the early part of the season, as remarked in the preliminary note on the oil-seed crops of Bengal, 1894-95, issued on the 15th February 1895, was marked by unusually late and heavy rainfall which lasted up to the second week of November, being particularly heavy in Bihar, Chota Nagpur, and North Bengal. From the second week of November practically no rain fell until after the middle of January. During the third week of January, rain fell generally in these provinces, though very scantily in Orissa. In February, the rainfall

was below the normal, except in the Patna Division, and there were no showers in the districts of Eastern Bengal. In March, light rain fell in most districts.

The prolongation of the monsoon rains of 1894, retarded cultivation and somewhat curtailed the usual area sown with oilseeds. The crops were also injuriously affected by the absence of rain from the second week of November to the middle of January, but the light showers which followed in the latter part of January, and in February and March were beneficial. Injury by blight is reported from Shahabad only—and injury by hail from Midnapore and Monghyr only.

3. *Area cultivated.*—The estimates of area sown with oilseed crops as reported in the first forecast, have been modified by the Collectors of Midnapur, 24-Parganas, and Shahabad; and estimates of normal area, this year's area and last year's area which were not supplied in the preliminary forecast for Gaya and for Angul and the Khondmals, have been now given, hence the difference between the areas under oilseeds as now reported and as returned in the preliminary forecast.

The total area in Bengal sown with oilseeds in 1894-95 is estimated at 4,112,100 acres against 4,270,300 acres, estimated as having been sown in the previous year. There is thus a decrease of 3·70 per cent. on the area sown in 1893-94 which is due to the prolongation of the monsoon rains of 1894.

4. *Character of the crops.*—The Collectors of only three districts, viz., Muzaffarpur, Malda, and Angul and the Khondmals estimate the outturn of the different oilseed crops of these provinces at 16 annas; from 20 districts including the North Bihar, Chota Nagpur and most of the districts of the Bhagalpur Division the crops are reported to vary from 12 to 15 annas, and from 20 more districts from 8 to 11 annas; from only two districts viz., Noakhali and Shahabad are the crops reported to be less than 8 annas.

Taking the province as a whole, the outturn of the oilseed crops may be estimated at 12 annas (as is in the preliminary forecast of the 15th February 1895).

The outturn is probably nearly the same as that of the crop of 1893-94, though the area sown was probably not quite so large.

*Gross outturn of oilseeds.*—In pursuance of the Government of India's order No. 8-53, dated 23rd February 1893, an attempt was made in 1892-93 to prepare estimates of outturn of the oilseed crops in tons for each district separately, but owing to flagrant disagreement of estimate of average outturn returned from neighbouring districts, the attempt proved unsuccessful. In the appended estimate of outturn in tons, (appendix B), six maunds have been taken to be the rate of average outturn per acre of linseed, rapeseed and mustard and  $4\frac{1}{4}$  maunds for other oil-seeds. The gross outturn of the oilseed crop in Bengal, during the year under report according to these estimates, is shown in the abstract statement to amount to 602,600 tons against 609,800 tons, the estimated outturn of the previous year.

N. N. BANERJEE,

*Assistant Director of the Dept. of Land Records  
and Agriculture, Bengal.*

W. C. MACPHERSON,

*Director of the Dept. of Land Records and  
Agriculture, Bengal.*  
The 25th May 1895.

## APPENDIX A.

## Final Report on the Oilseed Crops of Bengal, 1894-95.

1	2	3	4	5	6	7	8	9	10
DIVISION.	District.	Names of oilseeds.	Approximate normal area under oilseeds.	Approximate area sown last year (1893-94).	Estimated area sown this year (1894-95).	Taking 10 annas to represent the average outturn per acre, how many annas will represent the year's outturn (1893-94)?	Taking 10 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1894-95)?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
BURDWAN	Burdwan	Linseed ... Rapeseed and mustard Til (rabi) Other oilseeds. Total ...	Acres. 23,200 23,700 8,200 1,400 57,000	Acres. 26,300 21,600 3,200 1,500 53,000	Acres. 26,400 21,500 3,200 1,500 53,000	Annas. 10 10 12 11 10½	Annas. 10 10 11 11 10½	In the Sadar subdivision, owing to excessive rain during this year, the condition of the crops is worse than it was last year. In the Katwa subdivision, there being sufficient rainfall after the sowing time, the outturn will be the same as in the last year. Owing to seasonable rainfall in sowing time, the outturn in Katwa subdivision will be better than last year.	
	Birbhum	Linseed ... Rapeseed and mustard Til (rabi) Total ...	Acres. 1,000 3,000 500 4,500	Acres. 1,000 3,000 500 4,500	Acres. 1,000 2,500 500 4,000	Annas. 10 12 9 9	Annas. 10 9 9 9	There has been nothing particular to change the first forecast.	
	Bankura	Linseed ... Rapeseed and mustard Til (rabi) Other oilseeds ... Total ...	Acres. 1,300 9,600 7,900 10,000 28,700	Acres. 1,400 6,800 1,400 10,000 19,600	Acres. 1,300 7,000 1,200 10,000 19,400	Annas. 13½ 14 13½ 14 13½	Annas. 13½ 14 13½ 14 13½		

1	2	3	4	5	6	7	8	9	10
Division.	District.	Names of oilseeds.	Approximate normal area under oilseeds.	Approximate area sown last year (1893-94).	Retained area sown this year (1894-95).	Taking 10 annas to represent the average outturn per acre, how many annas represented outturn last year (1893-94)?	Taking 10 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1894-95)?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
BURDWAN— concid.	Midnapore	Linseed ... Rapeseed and mustard Til (rabi) Other oilseeds ... Total ...	24,300 40,300 18,000 24,300 107,900	14,000 32,000 17,500 18,000 81,500	14,500 37,400 18,000 21,000 92,900	12 12 10 10 11	12 12 11 10 11½	During the year a larger area was brought under cultivation, but owing to abnormal rainfall in consequence the outturn has not been so good as was expected. In the Salar slight damage was done to these crops by hail-storms.	
	Hoochly (with Howrah).	Linseed ... Rapeseed and mustard Other oilseeds ... Total ...	9,700 5,300 2,300 10,300	2,000 4,500 2,500 9,000	2,600 4,900 2,800 9,800	11 11 12 13	13 16 13 14½	The little increase in the outturn is due to favourable weather after sowing.	
	24 Parganas	Linseed ... Rapeseed and mustard Til (rabi) Other oilseeds ... Total ...	1,500 600 700 4,000 6,800	1,300 1,000 500 1,800 4,100	1,400 900 700 4,000 6,500	9 9 9 8 9	7½ 10 10 9 9	In the first forecast, this year's area under "other oilseeds" was erroneously shown as 2,000 acres instead of 4,000 acres as shown in the present report. Excessive rainfall at the time of sowing and the want of it afterwards caused the plants to be damaged, although the outturn of this year is a little better than that of last year.	
	Nadia	Linseed ... Rapeseed and mustard Til (rabi) Other oilseeds ... Total ...	67,000 57,700 14,000 18,000 156,700	44,500 24,100 6,500 9,500 84,600	41,900 23,700 7,100 9,300 81,900	10 8 9 9 9	10½ 9 9½ 10 10	Owing to the heavy rainfall at the beginning of November and almost total cessation of rain in February and March, the outturn has not been better than that estimated in the first forecast.	

PRESIDENCY	Murshidabad	{ Linseed Rapeseed and mustard Til (oil) Other oilseeds			{ 36,500 53,700 45,000 20,000			{ 27,000 18,700 4,000 15,000			{ 28,500 15,400 1,000 14,500			14	The increase in the outturn is owing to heavy rainfall at the close of the rainy season.
		Total			79,000			64,000			63,700				
	Jessore	{ Linseed Rapeseed and mustard Til (oil) Other oilseeds			{ 42,000 51,400 18,000 6,800			{ 33,000 48,700 24,000 5,800			{ 28,100 43,100 24,000 4,000			9	The decrease in the area and outturn is due to the heavy rainfall of the first week of November.
		Total			116,100			117,500			104,800				
	Khulna	{ Linseed Rapeseed and mustard Til (oil) Other oilseeds			{ 60,000 67,000 32,000 8,700			{ 4,800 68,000 32,000 5,100			{ 4,800 61,000 3,500 5,100			11	The heavy rains at the time of sowing damaged the seedlings, and hence the outturn is poor.
		Total			167,700			172,800			174,400				
	Rajshahi	{ Linseed Rapeseed and mustard Til (oil) Other oilseeds			{ 7,200 34,000 48,000 144,000			{ 9,200 22,000 4,000 144,000			{ 10,000 21,000 4,000 141,000			10	N. D. 10th noted in the collection of the first 10 days to change the 10 days of the crops.
		Total			232,200			275,200			275,000				
	Dinajpur	{ Rapeseed and mustard			{ 120,000			{ 120,000			{ 120,000			10	The plants could not thrive well for want of rain.

RAJESHWARI—  
concl'd.

1	2	3	4	5	6	7	8	9	10
Division.	District.	Name of oilseeds.	Approximate normal area under oilseeds.	Approximate area sown, last year (1893-94).	Estimated area sown this year (1894-95).	Taking 10 annas to represent the average output per acre, how many annas represented output last year (1893-94)?	Taking 10 annas to represent the average output per acre, how many annas will represent this year's output (1894-95)?	Remarks by the District Officers.	Remarks by the Department of Land Records and Agriculture, Bengal.
CHITTAGONG— contd.	Tippura	Linseed ... Rapeseed and mustard (11/1726) Other oilseeds ... Total ...	Acres. 2,350 16,740 2430 750	Acres. 3,000 6,100 13,100 200	Acres. 3,000 6,100 13,100 200	Annas. 84 11 11 5	Annas. 14 10 10 5	The low output is due to want of rain.	
	Chittarong	Linseed ... Rapeseed and mustard (11/1726) Other oilseeds ... Total ...	Acres. 1,000 2,900 100 3,500	Acres. 1,000 2,200 100 3,500	Acres. 900 2,300 100 3,100	Annas. 90 9 10 9	Annas. 9 10 10 9		
	Palna	Linseed ... Rapeseed and mustard (11/1726) Other oilseeds ... Total ...	Acres. 26,800 9,000 150 16,400 75,000	Acres. 21,000 23,000 1,300 13,100 57,700	Acres. 21,100 23,700 1,300 13,300 61,100	Annas. 10 10 9 10 10	Annas. 13 13 15 13 13	The ground was sufficiently moist to cause the increase in output. The moisture was not so beneficial to rapeseed.	
	Gaya	Linseed ... Rapeseed and mustard (11/1726) Other oilseeds ... Total ...	Acres. 55,400 25,500 12,100 81,100 139,100	Acres. 62,500 16,500 9,100 72,700 163,400	Acres. 62,400 15,200 9,100 81,100 168,500	Annas. 11 11 10 11 11	Annas. 9 11 10 11 10	Unusual rain at the time of sowing was very prejudicial to the crops. In some places, linseed was practically a failure.	

PATNA ...	Shahabad ...	<div> <div> <div>...</div> <div>...</div> <div>...</div> </div> <div> <div>...</div> <div>...</div> <div>...</div> </div> </div>	12,900 8,500 300 13,700	9,000 2,400 400 4,400	7,800- 2,400 300 3,500	11½ 9½ 5½ 10½	6½ 8 6½ 9½	In the Sadar subdivision, the crops improved since the submission of the first forecast. In the Buxar subdivision, the crops were seriously injured by harda during the year. The linseed crop in the Bhabua subdivision suffered much from the attack of harda since the submission of the first forecast; hence there was a decrease in the outturn of that subdivision.
		Linseed ... Rapeseed and mustard Til (rabi) Other oilseeds ... Total ...	36,000	16,200	14,300	10½	7	
		Linseed ... Rapeseed and mustard Til (rabi) Other oilseeds ... Total ...	8,200 24,300 4,600 11,700 49,000	6,600 25,500 4,000 10,300 46,400	6,600 24,300 4,000 10,300 45,400	16 14 16 16 15½	16 14 16 16 15½	
		Linseed ... Rapeseed and mustard Other oilseeds ... Total ...	20,700 101,300 3,500 125,500	205,000 100,000 3,000 308,000	130,000 93,800 3,000 226,800	16 8 6 13	14 8 6 12	The outturn is the same as was shown in the preliminary forecast except in the case of linseed, where owing to late rains and owing to too much moisture, the outturn was less.
		Linseed ... Rapeseed and mustard Other oilseeds ... Total ...	17,000 17,000 13,100 47,100	17,000 17,000 13,100 47,100	17,000 17,000 13,100 47,100	13½	16	The season was more favourable than last year, hence the full average outturn.
		Linseed ... Rapeseed and mustard Other oilseeds ... Total ...	47,700 49,400 21,500 118,600	58,900 52,500 19,800 131,200	46,400 40,300 19,900 106,600	11 11 9½ 10½	14 10 12 13	The late sowing, as noticed in the first forecast, interfered with the prospects of the crops. Rapeseed and mustard would have yielded an average crop had it not been for the wet weather in the latter part of January, which did considerable damage to the crop. Til cultivation in this district is nominal. It is generally sown with other crops when the cultivator chooses to grow it.
		Linseed ... Rapeseed and mustard Other oilseeds ... Total ...	10,500 11,300 10,700 32,500	5,400 8,700 8,500 22,600	5,400 8,800 8,900 23,000	16 16 16 16	10½ 11 13 11½	The year was favourable for the cultivation of oilseeds. The weather has since the submission of the first forecast been unfavourable, and consequently the outturn is decreased. There has been some injury from rain and hailstones in some parts of the district.

BHAGALPUR ...

PATNA ...

1	2	3	4	5	6	7	8	9	10
Division.	District.	Names of oilseeds.	Approximate normal area under oilseeds.	Approximate area sown last year. (1893-94).	Estimated area sown this year. (1894-95).	Taking 10 annas to represent the average outturn per acre, how many annas represented outturn last year (1893-94)?	Taking 10 annas to represent the average outturn per acre, how many annas will represent this year's outturn (1894-95)?	Remarks by the District Officer.	Remarks by the Department of Land Records and Agriculture, Bengal.
Bhagalpur	Bhagalpur	Linseed	14,100	13,000	12,300	11½	14	The crops this year have been harvested with good results. The sowing operation of the crops suffered on account of excessive moisture.	
		Rapeseed and mustard	38,200	35,200	36,700	10	13		
		Til (rabi)	510	505	500	11	14		
		Other oilseeds	17,200	17,100	15,700	14	14		
		Total	70,000	65,400	65,200	11	13½		
Purnea	Purnea	Linseed	11,000	8,700	8,700	13½	14	The very scanty rainfall in December and January tended to diminish the outturn expected when the first forecast was submitted.	
		Rapeseed and mustard	289,600	194,800	195,200	13½	14		
		Til (rabi)	400	300	300	13	16		
		Other oilseeds	1,900	600	600	13	18		
		Total	302,900	204,400	204,500	13½	14		
Malda	Malda	Linseed	6,300	10,200	10,200	8	16	The season was favourable to the cultivation of oil-seed crops, and the outturn has therefore been an average one.	
		Rapeseed and mustard	20,700	17,400	17,400				
		Til (rabi)	7,800	3,800	3,900				
		Total	34,800	31,400	31,400	8	16

The difference between this report and the preliminary forecast is due to the better outturn in the Sadar subdivision than what was estimated in the preliminary forecast.

The rainfall was pretty favourable. The figures reported in the first forecast hold good.

The increase in area as compared with that of the previous year against "other oilseeds," is due to seasonable rain. But there has been a decrease when compared with normal area. This is due to the rain not being favourable in all parts of the district at the sowing time. The increase in the outturn, as compared with the first forecast, is due to the seasonable rain and the growth of the plants. The season was favourable for the oilseed crops.

The slight increase in the outturn is due to favourable rain after sowing.

Seasonable rains proved conducive to cultivation, and hence the increase over last year's outturn.

		Of current year's crop.	Of previous year's crop.	Normal.	Column 6.	Column 7.	Estimated yield of current year, (a) of area in column 3, (b) of area in column 5 at full standard rate.	Yield of area in column 5 at full standard rate.	Yield of previous year.	Normal.	Percentage by which current year's exceeds (-) or falls short of (-) estimate in—				
											Column 12.	Column 13.	Column 14.		
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	
Bengal	Mustard	777,100	777,100	1,177,000	—57.7	—18.80	1,177,000	1,177,000	1,177,000	1,177,000	—21.7	—57.80	—12.60		
	Other oilseeds	1,212,900	1,254,700	1,170,000	—5.73	—8.81	1,212,900	1,048,000	1,138,000	213,600	—21.87	—5.84	—55.75		
	Total	1,112,100	1,270,300	1,552,700	—5.70	—17.78	1,029,900	824,800	1,040,800	687,400	—26.71	—17.19	—88.91		

These rates were adopted in the final reports on the oilseed crops of 1892-93 and 1893-94. One ton has been taken to be equal to 27 maunds 10 seers 14 chataks, or 27.27 maunds. The "normal" figures shown in columns 5 and 11 are probably excessive.

## THE EMPIRE OF INDIA EXHIBITION, 1895.

The following is published for general information.

REVENUE DEPT.,  
The 3rd June 1895.

C. E. BUCKLAND,  
Secretary to the Government of Bengal.

*Extract from the Proceedings of the Government of India in the Department of Revenue and Agriculture (Commercial Exhibitions),—No.  $\frac{16}{3-6}$ , dated the 24th May 1895.*

### RESOLUTION.

The following is published for general information in continuation of the Resolution of the Department of Revenue and Agriculture, No.  $\frac{7}{3-2}$ , dated 7th March 1895:—

*Letter dated 18th April 1895, from the Secretary, London Exhibitions, Limited.*

Messrs. French and Langdale of the India Tea Growers Association propose making a collective exhibit of specimen teas from the India tea gardens, pressed leaves, and other things of interest connected with the Indian tea industry. In view of this, my Directors consider that if you could see your way, in your official capacity, to issue a letter to the growers in the various tea districts intimating this fact, by this means not only would the knowledge be properly disseminated amongst the people interested, but also the circular emanating from yourself would have great weight. I am emboldened to ask you this as it is the wish of the Company to make the forthcoming Empire of India Exhibition a thoroughly representative one, particularly in that industry which has been so fruitful a source of revenue.

Any packages that may be sent should be distinctly labelled "For the Empire of India Exhibition," and should be addressed to Messrs. French and Langdale, Customs Chambers, 14, Dunsfane Hill, London, E.

Secretary to the Government of—  
Madras.  
Bombay.  
Bengal.  
North-Western Provinces and Oudh.  
Punjab.

Chief Commissioner of the—  
Central Provinces  
Burmah.  
Assam.  
Coorg.  
Ajmere.  
Resident at Hyderabad.

ORDER.—Ordered that the foregoing letter be published in the Supplement to the Gazette of India, and forwarded to Local Governments and Admin-

istrations noted on the margin for publication in the local Gazettes.

[True Extract.]

DENZIL IBBETSON,

*Offg. Secretary to the Government of India.*

## WEATHER AND CROP REPORT.

For the week ending the 3rd June, 1895.

**Burdwan.**—Rainfall at Burdwan 1·78. Weather very hot early in the week, latterly normal. Cultivation is going on. Sugarcane and *til* (sesamum) are doing well. Common rice sells from 11 to 21 seers a rupee in the district.

**Midnapore.**—Rainfall at Sadar 1·61. Weather hot. More rain wanted for agriculture and for drinking purposes in Contai. Indigo, sugarcane and *til* (sesamum) doing well. Tobacco and *jara* growing badly. Rice sells from 16 to 21 seers per rupee.

**24-Parganas.**—Rainfall at Sadar 1·08. Weather seasonable with storms. Sowing of *aus* and jute continues. Prospects fair. Condition of cattle good. Fodder sufficient. Water scanty. Rice sells at—

	Srs.
Sadar	13
Barasat	16
Basirhat	20
Diamond Harbour	15

} per rupee.

**Murshidabad.**—Rainfall 1·06. Weather hot and cloudy. Sowing of winter rice continues. State of sugarcane, mulberry, indigo, and *til* (sesamum) appears good, but rain is wanted. Fodder is available. Price of common rice 16 seers per rupee.

**Khulna.**—Rainfall at Khulna 2·20, Bagerhat 2·25, Satkhira 2·14. Weather hot. Preparation of the land for *aman* going on. *Aus* and jute seedlings doing well. Sowing of *aus* and jute still continues in some places. Common rice selling from 17 to 23 seers per rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall 1·82. Weather hot and cloudy. Prospects of crops good. Price of common rice 15 to 16 seers a rupee. No cattle-disease, nor any complaint for fodder or drinking water.

**Rangpur.**—Average rainfall 2·15. Weather warm and cloudy. Crops progressing favourably. Cattle-disease dying out. Condition of cattle good and fodder available. Rice selling from 10 to 15 seers per rupee.

**Pabna.**—Rainfall 1·97. Weather hot. Good rain has fallen. All standing crops are doing well. Common rice selling at 16 seers a rupee at Pabna. Fodder and water sufficient.

**Dacca.**—Rainfall figures not supplied. Monsoon weather. Prospects of crops good. Price of common rice 19 seers per rupee. No cattle-disease. Fodder plentiful.

**Chittagong.**—Rainfall 2·97. Weather showery with occasional sunshine. Cultivation for *aus* still continues. Prices rising. Fodder and water sufficient. Condition of cattle good.

**Patna.**—Report not received.

**Gaya.**—Sugarcane doing well. Preparation of land for *bhadoi* sowings has begun. Prices about normal. Fodder and water sufficient.

**Champanan.**—Rainfall at Motihari 1·21. Weather a little cooler. Common rice selling at 16 seers a rupee. Fodder and water for cattle sufficient.

**Darbhanga.**—Weather very hot with high east wind. Standing crops doing well. Rain much wanted. Fodder for cattle sufficient. Prices almost stationary.

**Bhagalpur.**—Weather cooler. Paddy seedlings and indigo are doing well. *Bhadoi* sown in several places. Rain wanted. Fodder sufficient. Price of common rice 18½ seers per rupee.

**Purnea.**—Rainfall 1·95. Weeding of jute and *bhadoi* paddy going on. Transplantation of *aghani* paddy commenced. Fodder and water sufficient. No cattle-disease. Common rice selling from 16 to 21 seers a rupee.

**Cuttack.**—Rainfall 1·01. Weather very hot. Sowing of *beali* and *sarad* rice going on. Rain wanted for cooling the weather and for agricultural purposes. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 25 seers per rupee.

**Hazaribagh.**—Weather very hot. Sowing and ploughing in progress in places. Sugarcane doing well. Mango indifferent. Fodder scanty and water deficient in places.

**General Summary.**—There was good rain during the week in almost all reporting districts in Bengal Proper and also in Champanan and Purnea. The present agricultural outlook is generally fair, but more rain is required in some districts. The sowing of *aus* rice and jute is nearly complete, and the preparation of the land for the *bhadoi* crops in Bihar and of the winter rice crop is in progress. Reports of the sugarcane, indigo and other standing crops continue satisfactory. No cattle-disease has been reported during the week, and in Rangpur it is said to be dying out. The price of common rice is almost stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,  
The 4th June, 1895.

C. E. BUCKLAND,  
Secretary to the Govt. of Bengal.

\* *Explanation.—Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the mean at the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question. The station in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 1st of June 1895.

DISTRICT OBSERVATIONS.																DISTRICT.

in ten years. The variations are negative when the mean of the week is less than the corresponding normal mean, and positive when greater. Numbers denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District Observations, the normal being the past ten years. The means of the district are the numerical average of the rainfall returned received in the district, i.e., from total rainfall at the sub-divisional

## Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 1st of June 1895.

Meteorological divi- sion.	Division.	District.	Station.	RAINFALL.							Total number of rainy days.	Rainfall of week.	Average rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 16th May 1895.	Average rainfall from 16th May to date.	
				Sunday, 26th May.	Monday, 27th May.	Tuesday, 28th May.	Wednesday, 29th May.	Thursday, 30th May.	Friday, 31st May.	Saturday, 1st.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY,  
THE 1st OF JUNE 1895.**

TOWARDS the end of the previous week, after a period of intense heat in the west of the province, unusually steep pressure gradients and strong winds had developed over the north of the Bay. The changes of pressure at the beginning of the present week led to even steeper gradients with the area of lowest pressure well to the west, so that easterly winds became general except in Chota Nagpur and Orissa. Thunderstorms were very numerous on Sunday the 26th, the first day of the week, and heavy rain fell over a large part of the province. A great reduction of temperature resulted over the area affected, but it did not include Orissa and Chota Nagpur, where mean temperature was still between  $5^{\circ}$  and  $1\frac{1}{2}^{\circ}$  above the normal.

On the 27th, the following day, a rapid fall of pressure occurred, the change increasing towards the north. This caused a temporary low pressure area over the northern districts, and the winds from being south-easterly at all except the extreme south-western stations became south-westerly in South-West and Central Bengal and the west of Bihar. The rainfall ceased except in Assam and North Bengal, and the hot winds from the west caused a rapid increase of temperature. On the following day changes of pressure were small, but the reaction from the rapid fall of the day before commenced in a slow rise in Assam and North Bengal. Temperature rose steadily, and was largely above the normal in all districts except Assam. The rise of pressure on the 29th was brisk in the northern districts and slow in the south, while over the Bay there was a slow fall, and the distribution was more normal. There was little change otherwise as the excessive heat continued over the whole province. The rise of pressure continued more rapidly on the 30th, especially in the central districts, where it was more than  $\cdot 15$  inch. The resulting distribution was almost normal, and as the area of lowest pressure had now been forced to the south-west, easterly winds became general. Thunderstorms followed, and there was a fall of temperature everywhere. These weather conditions prevailed during the remaining two days of the week. Thunderstorms were fairly frequent, except in Orissa, Chota Nagpur, and South Bihar, and the area of comparatively cool weather slowly extended westwards. On the 31st it included East and North Bengal and North Bihar. On June 1st temperature was below the normal to the east of a line running almost due north through Balasore and Bhagalpur, while to the west excess was more than  $5^{\circ}$  at Cuttack, Gaya, and Dehri only.

*Pressure* did not usually differ by more than  $\cdot 1$  inch at the beginning of the week, but excess in the Circars and defect in Chota Nagpur caused much steeper gradients than generally obtain at this time of the year. The rapid fall of the 27th resulted in defect of a fifth of an inch in the north of the province, and this did not give way to any great extent till the rapid rise of the 30th, when the distribution was almost normal. Owing to the rather large defect in the early part of the week, and the small differences from the normal towards the end, means are below the normal everywhere by amounts varying from about  $\cdot 05$  inch in Orissa and Chota Nagpur to nearly  $\cdot 1$  inch in parts of South-West Bengal and Bihar.

*Temperature.*—At the beginning of the week heat was excessive only in Chota Nagpur, while in East and North Bengal weather was unusually cool. The mean difference from the normal varied from excess of  $12^{\circ}$  at Ranchi to defect of nearly  $9^{\circ}$  at Bogra and Sirajganj. Owing to the hot westerly winds on the 27th and 28th, temperature steadily rose, and on the latter of these days there was excess everywhere except in Assam. In Chota Nagpur and the adjacent parts of Orissa, South-West Bengal and Bihar excess varied from  $10^{\circ}$  to  $16^{\circ}$  and only at a few eastern stations was it less than  $5^{\circ}$ . After the wind became easterly and thunderstorms were general, there was a steady fall, and cool weather was again general in the east of the province. Bankura reported a maximum temperature of  $116^{\circ}\cdot 1$  on the 28th and 29th, and Balasore  $116^{\circ}$  on the 30th. Raniganj, Midnapore, Chaibassa and Cuttack had day readings of more than  $115^{\circ}$ , and nearly all stations in South Bihar of more than  $110^{\circ}$ . Mean temperature is above the normal by  $9^{\circ}\cdot 1$  in Chota Nagpur, by  $5^{\circ}\cdot 7$  in Orissa,  $4^{\circ}\cdot 5$  in South-West Bengal, and by  $3^{\circ}\cdot 2$  in South-West Bengal. In the other districts it is below the normal.

*Rainfall.*—Very general showers fell on the first day of the week in all districts except Orissa and Chota Nagpur, where rain has been almost altogether absent throughout the week. Heavy rain has fallen in Assam and East Bengal. North Bengal has received the normal amount, but in the other districts there is a rather large defect. In Orissa the average fall is  $\cdot 18$  inch as compared with a normal fall of  $1\cdot 03$  inches. In Chota Nagpur it is one-seventh of the normal, and in Bihar a third. In South-West Bengal the fall is  $1\cdot 03$  inches, rather more than half an inch less than the normal.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 1st of June 1895 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1895.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; p, passing temporary showers; t, thunder; w, strong wind.

### RESOLUTION ON THE ADMINISTRATION REPORT OF THE JAIL DEPARTMENT FOR THE YEAR 1894.

No. 106P.—D.

#### RESOLUTION.

##### JAILS.

*Dated Darjeeling, the 3rd June 1895.*

READ—

The Report on the Administration of the Jail Department for the year 1894.

Read also—

- The Reports for the years 1892 and 1893, and the orders of Government recorded thereon.

Surgeon-Lieutenant Colonel D. W. D. Comins held charge of the Department throughout the year. His report, which bears date 1st May 1895, was received in the Secretariat on the 15th May, and this delay has made it impossible to prepare the Government Resolution by the date when it is due to the Government of India, the 1st June. The chief administrative event of the year was the passing of the Prisons Act and Prisoners' Act in the Supreme Legislative Council, a result of the recommendations of the Jail Committee appointed in 1888 to report upon certain matters connected with jail administration in India. The law being altered, it was necessary to take in hand the revision of the Jail Code, and Mr. W. Leonard, Superintendent of the Bhagalpur central jail, was placed on special duty for the purpose.

2. *Judicial Statistics.*—The only change made in the classes of jails during the year was the conversion of the Hazaribagh district jail into a second class central jail. The following table shows the total number of prisoners of a

classes confined in the jails and subsidiary jails of the province during 1894 and the preceding ten years:—

	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.	1893.	1894.
1	2	3	4	5	6	7	8	9	10	11	12
Number of prisoners of all classes in jails and subsidiary jails on the last day of previous year ...	14,718	15,354	15,076	14,020	13,210	13,985	15,048	15,211	16,600	17,794	17,530
Total number admitted during the year ...	80,852	80,853	77,966	75,664	81,136	84,630	80,059	87,925	95,523	91,842	91,740
Total ...	95,570	90,807	93,042	90,293	94,346	98,624	96,007	103,136	112,132	109,636	109,276
Total discharged ...	80,216	81,131	78,413	77,083	80,361	83,576	80,800	86,546	94,338	92,100	92,448
Balance at the end of the year ...	15,354	15,076	14,020	13,210	13,985	15,048	15,207	16,590	17,794	17,530	16,822
Daily average of all classes...	15,101	15,177	14,806	12,250	13,731	15,026	14,777	15,916	17,180	17,724	17,344

The most important statistic is that which shows the number of persons sentenced to imprisonment and admitted direct to jail, year by year. The Lieutenant-Governor observes with satisfaction that the decrease in this figure, which began in 1893, has been maintained in 1894, and there is some reason to connect this decrease, as well as the previous increase, with the price of food.

A statement showing the average retail price of common rice for the whole province on the 31st December for each year from 1887 to 1894, and also the number of convicts admitted direct in each year, is given in the margin. The gradient which would represent in a diagram the numbers annually admitted direct into prison agrees closely with that which would represent the scale of prices. Food rose in value from 1887 to 1889, and the numbers admitted increased year by year. In 1890 food was cheaper (as shown by the figures on the 31st December), and the numbers admitted in that year fell off. It grew dearer in 1891 and again in 1892, and the numbers admitted in those years show a continuous increase. Prices fell again in 1893 and 1894, and the numbers sentenced to imprisonment fell with them.

3. The following table shows those districts which have furnished the largest numbers of convictions with the population and ratio of convictions per mille of population:—

DISTRICT.	Population.	Number of convictions.	Ratio per mille of population.
1	2	3	4
Mymensingh ...	3,472,186	1,677	·48
Faridpur ...	1,797,320	1,600	·89
24-Parganas ...	1,892,033	1,520	·80
Calcutta ...	681,560	1,384	2·03
Monghyr ...	2,036,021	1,352	·66
Saran ...	2,467,477	1,324	·53
Dacca ...	2,420,656	1,305	·53
Sonthal Parganas ...	1,754,196	1,256	·71
Muzaffarpur ...	2,711,445	1,162	·42
Champaran ...	1,859,465	1,109	·59
Backergunge ...	2,153,965	1,097	·50
For whole Province	71,346,987	36,178	·50

The Inspector-General should in future reports always show the proportion of convictions to the population of the district as has been done in the above table; it is obvious that a mere statement of the number of convictions gives a very misleading impression of the incidence of crime.

4. *Releases.*—The following table gives a comparative view of the number of releases under the various heads during the last eight years:—

	1887.	1888.	1889.	1890.	1891.	1892.	1893.	1894.
1	2	3	4	5	6	7	8	9.
Released on expiry of sentence ..	21,828	20,458	28,754	28,464	28,678	32,548	33,046	29,169
.. on appeal ..	1,003	1,980	1,942	2,038	2,120	2,156	1,931	1,997
.. under remission rules ..	1,017	1,352	1,575	1,023	1,661	1,598	1,771	4,520
.. on medical grounds ..	29	33	37	39	105	140	44	67*
.. on other grounds ..	6,484	89	2	9	9	8	9	80

\* Excluding 13 moribund prisoners who were released under Rule 488 of the Jail Code and included as deaths.

The divergence in the numbers under the heads "On expiry of sentence" and "Under remission rules" is partly due to the inclusion of one-year prisoners under the mark system. The number of releases on appeal shows a small increase over the figures for the previous year; but the figures are smaller than those of the three years preceding 1893. In this respect Malda again heads the list with 12·71 per cent. of releases on appeal. The number of prisoners transported from the Bengal jails rose from 120 to 127. The number of executions shows a steady decrease during the last four years, the figures being 37 in 1891, 32 in 1892, 30 in 1893, and 20 in 1894.

5. *Classification of convicts.*—Out of the 36,178 convicts admitted direct into jail during the year, 20,719, or 57·27 per cent., were Hindus, 13,702, or 37·87 per cent., Muhammadans, and 369, or 1·02 per cent., Christians. The number of juveniles under 16 years of age admitted to jail was 478 against 458 in 1893. The reformatory schools at Alipore and Hazaribagh remained full throughout the year. Fifty additional cubicles were constructed at the latter institution. The total number of female convicts admitted direct to jail was 1,444 as compared with 1,510 and 1,484 in 1893 and 1892, respectively. The following table shows the number of convicts sentenced to various terms of imprisonment and the respective percentage to total of convicts for the two years 1893 and 1894. It will be seen that the ratios are remarkably similar:—

LENGTH OF SENTENCE.	1894.		1893.	
	Number of admissions.	Ratio per cent. to total number sentenced.	Number of admissions.	Ratio per cent. to total number sentenced.
1	2	3	4	5
Not exceeding one month ..	12,768	35·3	13,283	35·6
Above one month and not exceeding three months ..	8,291	22·9	8,509	22·8
Above three months and not exceeding six months ..	6,335	17·6	6,154	16·6
Above six months and not exceeding one year ..	4,724	13·0	4,838	13·0
Above one year and not exceeding two years ..	2,411	6·7	2,649	7·1
Above two years and not exceeding five years ..	1,080	3·0	1,260	3·4
Above five years and not exceeding ten years ..	356	·9	328	·9
Exceeding ten years ..	5	·0	2	·0
Transportation ..	138	·4	130	·3
Ditto for a term ..	37	·1	57	·2
Sentenced to death ..	30	·1	55	·1
Total ..	36,178	...	37,265	...

6. *Reconvictions.*—While the total number of admissions to jail has shown a decrease, the number of reconvictions has risen from 3,888 in 1892 to 3,969 in 1893 and 4,086 in 1894, the ratio per cent. to total convictions being 10·08, 10·65, and 11·29. The Inspector-General ascribes this increase to the effect of the introduction of the Bertillon system, and the increased attention paid to the identification of prisoners. There has been steady and satisfactory progress in this respect since 1891, and it is hoped that the co-operation of the jail authorities with the police will lead to still further improvement in future years. From information supplied by the Inspector-General of Police it appears that in 1893 (from July till December) 23 reconvictions were directly due to the identification afforded by this system of measurement, while no less than 143 old convicts were detected by this means in 1894. The increase shown in the number of persons imprisoned in default of giving security for their good behaviour during the preceding three years has not been maintained in 1894, the number having fallen from 1,761 to 1,723.

7. *Sentences.*—The number of sentences of simple and rigorous imprisonment fell from 2,965 and 33,983 to 2,617 and 33,176, respectively. Of the total admissions, 32,121 had sentences not exceeding one year, and 4,057 sentences exceeding one year. The ratios per cent. to total convictions are thus 88·79 and 11·21 as compared with 87·97 and 12·03 of the previous year. The corresponding ratios throughout the whole of British India during 1893 were 85·99 and 14·01, respectively.

8. *Under-trial prisoners.*—The total number of under-trial prisoners admitted during the year was 31,507 as compared with 32,307 in 1893 and 33,525 in 1892. Of the total number admitted, including those remaining in jail on the first day of the year, 16,593, or 50·92 per cent., were finally convicted, and 12,596, or 38·65 per cent., released. In 1893, 49·81 per cent. were convicted and 40·41 per cent. released. As illustrating the general unhealthiness of the year, it is noted that 61 under-trial prisoners died as compared with 32 in 1893. Eight under-trial prisoners escaped from subsidiary jails, of whom four were recaptured. The figures for 1893 were,—four escapes, three recaptures. The average detention of under-trial prisoners in Sessions cases was the same as in the preceding year, viz., 39·99 days; but Sir Charles Elliott is very disappointed to notice an increase in the average detention in the Magisterial Courts cases, from 10·98 to 11·96 days. The following table shows the districts where detention in trials before Magistrates was longest, with the total numbers of prisoners under trial, contrasted with the figures for 1893:—

DISTRICT.	1894.		1893.	
	Total prisoners under trial.	Average detention in days.	Total prisoners under trial.	Average detention in days.
1	2	3	4	5
Dinajpur ...	284	27·22	311	7·92
Darbhanga ...	290	18·53	250	12·64
Chaibassa ...	618	17·17	499	9·86
Barisal ...	477	15·67	528	12·86
Hooghly ...	248	14·80	281	16·40
Mymensingh ...	506	14·67	531	11·06

The comparison here afforded is not creditable to the districts concerned, and discloses remissness on the part of Magistrates in a duty so constantly inculcated. The figures for Dinajpur are particularly bad, and such as to demand a special enquiry by the Commissioner. The shortest detention occurred in Gaya (3·77), Balasore (7·55), and Khulna (7·86).

9. *Civil Prisoners.*—Fifty-seven civil prisoners remained in confinement at the close of 1893, and 747 were admitted during 1894, against 751 in the

previous year. Of this total, seven were transferred, two died, and 731 were released, leaving 64 in confinement at the end of the year.

10. *State Prisoners.*—The Lushai prisoner, Nikoala, who was confined in the Alipore central jail, died on the 3rd September 1894. Two Lushai Chiefs, Thangula and Dakola, were detained in the Hazaribagh jail throughout the year. Two others, Ropui Lieni and Lahhuama, were admitted into the Chittagong jail in April 1894. The Government of India have recently sanctioned the transfer of Thangula and Dakola to Assam and Chittagong respectively. Ropui Lieni has died in the Chittagong jail since the close of the year.

11. *Jail Buildings.*—Excluding a sum of Rs. 1,433 expended upon the Presidency Jail Press, Rs. 1,353 upon the reformatory schools at Hazaribagh and Alipore, and Rs. 58 on the Jagatsingpur bajat (or in all Rs. 2,844), the total actual expenditure during 1894 was Rs. 79,169 as compared with Rs. 84,310 of the previous year. The grant for major works for the year 1894-95 amounted to Rs. 80,000; of this, Rs. 19,041 only are shown as expended up to the close of the calendar year for which this report is submitted. This would seem to indicate that sufficient effort had not been made to utilise the whole grant; but the figures for the financial year 1894-95, to which these grants apply, procured from the Public Works Department, show that, as far as the expenditure has been fully accounted for, Rs. 73,332 had been spent up to March 1895. Certain items of this total are, however, still subject to alteration.

Among the more important works undertaken or completed during the year were the construction of additional wards in the Bhagalpur central jail and the reconstruction of the old workshops in the Alipore jail. The latter work, commenced in 1893, was finished at a total cost of Rs. 24,205, exclusive of work done by the Sibpur workshops. Rupees 14,000 were sanctioned for a sleeping barrack in the Comilla jail, and Rs. 7,360 for making additions and alterations in the Presidency jail. The Lieutenant-Governor has put a stop to the system hitherto observed of allotting separate grants for major and minor works, and has now given the Department a lump sum of one lakh for new works, which the Inspector-General can distribute as he likes among works the importance of which has been admitted and for which administrative sanction has been given.

The question of providing separate compartments, or cubicles, for sleeping has been under the careful consideration of this Government, and plans, specifications and estimates for four different kinds of cubicles have been prepared by the Department of Public Works. Two of these have been selected, and will be tried in the new ward to be constructed in the Bhagalpur jail, as well as in one of the new wards to be made in the Hazaribagh jail. A series of new standard plans, embodying all the latest improvements suggested, has also been drawn up in the Public Works Department for an intermediate jail, a cellular jail, cubicles, latrines, a roof ventilator, and a new pattern grating.

12. *Guards.*—The Inspector-General raises the question of the pay of warders and the difficulties experienced by certain Superintendents of central Jails to obtain suitable men as recruits. He remarks upon this subject:—

“Now that the pay of sepoys has been increased and the pay and position of the police improved, it must be expected that the warder service will not be sought after unless similar advantages are obtained. As a result of the drain on central jails, the warders sent to district jails have often been untrained, wanting in discipline, and with an insufficient knowledge of their duties, but as a body the warder guard have behaved well.”

His Honour will be prepared to give consideration to this matter if the Inspector-General submits, after full enquiry, his proposals in a definite shape.

The number of criminal offences committed by the warder guard fell from 45 to 34, and departmental offences were also fewer. The total number of punishments inflicted during the year was 1,863 as compared with 1,879 in 1893 and 1,935 in 1892. The Inspector-General reports that the Lieutenant-Governor's wishes expressed in the Resolution on the Jail Report for 1892 regarding the drilling of warders along with the police have been carried out fully whenever the distance between their respective parade grounds has not proved an insurmountable difficulty.

13. *Escapes.*—The number of escapes among convicts fell from 26 in 1893 to 21 in 1894. Of these, 8 were from district jails, 2 from intermediate

jails, and 11 from subsidiary jails. Ten prisoners escaped from inside and 11 from outside the jails, as compared with 12 and 14, the corresponding figures for 1893. Four warders are reported to have been criminally prosecuted for negligence in this connection, and sentenced to terms of imprisonment, ranging from 18 months to 15 days. Of the 21 convicts who escaped, 17 were recaptured, besides 5 who had escaped in previous years. Of those who escaped, 17 had sentences under one year, one of seven years and over, and three were life convicts.

14. *Prison discipline.*—The following table shows the nature of offences committed by convicts:—

	1	2	3				
			OFFENCES DEALT WITH BY SUPERINTENDENT.				
			A.	B.	C.	D.	E.
	Daily average population.	Offences dealt with by Criminal Courts.	Relating to work.	Relating to prohibited articles.	Relating to assaults, mutiny and escapes.	All other breaches of Jail rules.	Total.
1894 ...	16,080	53	20,334	4,760	661	15,540	41,295
1893 ...	16,427	6	24,799	4,157	546	15,574	45,076

The figures for 1893 have been supplied in this office, and the Lieutenant-Governor desires that all tables of this kind in the Report should furnish the corresponding figures for the previous year. There has been a considerable decrease in offences relating to work, and an increase under the head "Prohibited articles," said to be due to the larger number of prisoners employed outside the jail and on buildings. Exclusive of warnings, the total number of punishments was 29,983 as compared with 33,206 in 1893 and 34,694 in 1892. The total number of warnings was 11,312 against 11,871 in the previous year. The number of whippings was 277, and the decrease in the percentage to total punishments was marked, viz., from 0.97 in 1892 to 0.72 in 1893 and 0.67 in 1894. The jails which show the largest ratio in this respect are Jalpaiguri (3.77), Presidency, *European* (2.32), and Monghyr (2.15); the corresponding ratio for all British India was 1.85 in 1892 and 1.41 in 1893. There was only a single case of whipping in the Dacca central jail during the year. The total number of prisoners punished with fetters also shows a decrease from 10,418 in 1893 to 9,417 in 1894.

15. *Convict officers, mark remissions, &c.*—The convict officers, of whom on an average 937 were male and 13 female prisoners, are reported to have been of the greatest assistance in the preservation of discipline. The new mark rules, which give effect to one of the proposals made by the Jail Committee appointed in 1888, and which were adopted by the Government of India, came into force on the 1st January 1894. The chief innovation made by these rules is that they reduce the limit of sentence rendering a prisoner eligible for remission by marks from two years to one year.

The Lieutenant-Governor is glad to notice that the system of giving relief to destitute prisoners on release from the Claude Martin Fund was worked with care and success, and that 1,103 prisoners were relieved in this way from a sum of Rs. 2,500 placed at the Inspector-General's disposal. Besides this all prisoners receive, on their release from jail, a sum graduated according to the distance of their homes, to support them on the way. The careful disbursement of this subsistence allowance is a matter to which the Lieutenant-Governor in the course of his inspections has always attributed great importance, and he has insisted on the Civil Surgeons in charge personally seeing that the proper

allowance under the rules, to enable the released prisoner to reach his home, is actually given.

16. *Expenditure.*—The gross expenditure on jails and subsidiary jails during the year and the nine previous years is shown in the following statement:—

	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.	1893.	1894.
	1	2	3	4	5	6	7	8	9	10
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.

Medical stores ..	7,545	6,252	6,850	5,390	2,848	2,620	1,245	1,030	298	385
<b>Total</b> ..	<b>11,16,423</b>	<b>10,93,361</b>	<b>9,68,033</b>	<b>10,68,161</b>	<b>11,91,140</b>	<b>11,27,827</b>	<b>11,65,509</b>	<b>12,62,526</b>	<b>12,81,454</b>	<b>13,65,328</b>
Daily average population of all classes	15,176	14,800	12,250	13,731	15,025	14,777	15,915	17,178	17,721	17,340
Average expenditure per prisoner ..	Rs. A. P. 73 9 0	Rs. A. P. 73 13 6	Rs. A. P. 79 0 4	Rs. A. P. 77 12 8	Rs. A. P. 79 4 5	Rs. A. P. 76 6 3	Rs. A. P. 73 3 9	Rs. A. P. 74 10 6	Rs. A. P. 72 5 0	Rs. A. P. 79 14 3
Public Works Department ..	Rs. 60,657	Rs. 92,604	Rs. 1,88,353	Rs. 2,40,244	Rs. 2,37,214	Rs. 1,56,810	Rs. 2,03,705	Rs. 1,56,543	Rs. 84,310	Rs. 79,469

The increase in expenditure is large, but the Lieutenant-Governor considers it is quite justified by the explanations given by the Inspector-General. The only head under which there is a decrease is that of supervision. The increases under the heads "Diet," "Hospital charges" and "Clothing" are satisfactory in view of the higher mortality of the year, which might otherwise have been ascribed to undue economy. The average cost per prisoner has been Rs. 79-14-3—the highest rate that has occurred during the last ten years.

17. *Average rates.*—The average prices paid for the principal articles of diet during the year 1894 as compared with the five previous years are shown in the following table:—

	1894.	1893.	1892.	1891.	1890.	1889.
	1	2	3	4	5	6
	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.

Price of rice on 31st December according to figure in paragraph 2 ..	2 12 9	2 15 2	2 18 9	2 5 4	2 5 7	2 5 5

Dr. Comins reports that the storage of grain in bulk in the cheap season has been carried on in most jails fairly well, and in some with great success. The Lieutenant-Governor is glad to receive the testimony of Dr. Comins to the forethought displayed in this respect by many Superintendents and jailors, and trusts that still further improvement may be made. It will be seen from the bottom line in the table that the price paid by the Jail Department has been lower than the average price recorded in the prices-current for every year since 1889.

18. The expenditure per prisoner for diet in each jail is contrasted with that of the previous year in the following table:—

JAILS.	1894.	1893.	JAILS.	1894.	1893.	JAILS.	1894.	1893.

The average expenditure per prisoner for diet throughout the province was Rs. 25-15-10 as compared with Rs. 24-12-8 in 1893, Rs. 25-10-6 in 1892, and Rs. 22-12-10 in 1891. Out of the 47 jails in Bengal, 28 show an increase and 19 a decrease over the figures for the previous year. As the price of all food-grains was lower, the increase in cost must have been due to a more liberal diet and better quality of food being given to the prisoners on medical grounds.

19. *Establishment.*—The figures in the margin indicate the expenditure

under this head during the past five years. There has been an increase of Rs. 17,094 during the year under report. Of this, Rs. 13,416 represents exchange compensation allowance and allowances drawn by medical officers holding executive charge of central jails during the absence on privilege leave of the permanent incumbents. There is an increase of Rs. 1,547 under the head "Jailors, Deputy and Assistant Jailors," and of Rs. 1,628 under the head "Civil Hospital Assistants and Compounders."

Hospital charges rose from Rs. 52,541 in 1893 to Rs. 70,148 in 1894, owing to the larger number of prisoners requiring medical treatment, and to the supply of extra and more varied diet during an unhealthy year. To the cause of health is also to be laid the rise in expenditure on clothing. The largest increase (Rs. 39,980) has occurred under the head "Contingencies," chiefly under the following items:—Transfer charges (Rs. 7,457), municipal taxes (Rs. 8,864), cows, &c. (Rs. 3,362), and pumps (Rs. 2,401). The Government of India have recently, in view of the inconveniently vague nature of this head, prescribed a revised form of Statement No. X, and drawn up a schedule indicating items of charges which should be included under each head. The amended classification, which should come into force from this year, will remove the objections which attach to the present system. The Lieutenant-Governor observes, however, that such items as pumps, ejectors, incinerators, waterlifts, and cooking ranges, which are permanent structural improvements, should have been shown separately in this Report, and not amalgamated with items which are essentially "contingent" charges.

20. Taking together all three heads of controllable expenditure, viz., "Diet," "Hospital charges," and "Clothing," the average cost per prisoner was Rs. 34-11-6 compared with Rs. 31-13-11 in 1893 and Rs. 33-1 in 1892. Of the 33 jails in which the cost per prisoner has been below the average for all jails, 18 have had a mortality among convicts under the average, and 15 above. Of the 15 jails in which the cost per prisoner has exceeded the average, 8 have had a mortality above the average, and 7 under. In future the Inspector-General should, in comparing economy in expenditure, insert in the table illustrating it a column showing the death-rate per mille of all admissions. A comparison thus effected bears out the statement made in last year's Resolution that it cannot be said that a high rate of mortality accompanies economy in food.

21. *Employment of prisoners and manufactures.*—The average daily number of prisoners sentenced to labour on working days was 15,900 as compared with 16,219 of the previous year. The daily average of sick, convalescent, and infirm rose from 1,872 to 2,185; the number employed on unremunerative labour from 1,080 to 1,131; and the number employed on jail buildings from 719 to 1,032. The Lieutenant-Governor regrets to see that the numbers employed on gardening have been steadily decreasing since 1892, although this is the healthiest and most natural form of labour for prisoners. The net cash earnings for the year were Rs. 4,90,536, showing a very satisfactory increase over the figure for the previous year (Rs. 3,81,086). The improvement was chiefly due to working off the stock of raw materials in the Bhagalpur jail at the end of 1893, whereby the cash earnings of that jail rose from Rs. 212 to Rs. 72,101.

22. *Average earnings in central jails.*—The following table compares the average earnings per prisoner sentenced to labour in central jails for the last two years:—

	1894.	1893.
	Rs. A.	Rs. A.
Presidency ... ..	112 7	121 14
Buxar ... ..	51 6	51 6
Alipore ... ..	40 2	32 5
Bhagalpur ... ..	24 5	21 10
Midnapore ... ..	20 0	24 2
Rampur Boalia ... ..	8 12	9 2
Hazaribagh ... ..	6 6	8 8
Dacca ... ..	5 8	6 5

The ordinary profit in the Alipore jail rose from Rs. 58,051 to Rs. 69,759, while the aggregate value of articles supplied to other departments rose from Rs. 1,01,820 to Rs. 1,30,751. The decrease in the value of the work done in the Presidency jail, in the Press Department, which fell from Rs. 1,56,921 in 1893 to Rs. 1,39,310 in 1894, is ascribed to a smaller daily average of convicts employed and to their general bad health. In the Buxar central jail the earnings amounted to Rs. 55,493, as compared with Rs. 58,278 in the previous year; while the average per prisoner employed on manufactures rose from Rs. 90-6 to Rs. 98-6. The ordinary profit in the Bhagalpur jail rose from Rs. 26,611-11 in 1893 to Rs. 30,859-6 in 1894. In the Midnapore jail the figures show a decline from Rs. 20,816 to Rs. 15,727, due to the unhealthiness of the jail during the first-half of the year, all manufacturing operations having been stopped for a period of three months. The average profits of the district jails amounted to Rs. 68,710 as compared with Rs. 72,690 in 1893. The decrease is chiefly due to the exclusion of the Hazaribagh jail from the list of district jails.

23. *Quinine and its distribution.*—In the Resolution of the 6th December 1892, the Lieutenant-Governor decided, with the object of extending the use of quinine among the poorer classes of Bengal, so liable to the ravages of fever, to supply the drug from the Government Factory at Darjeeling, and have it made up in packets of 5 grains each by jail labour for distribution through the agency of post offices and other public offices. At first it was arranged to have the packets prepared at the Hazaribagh Reformatory School, but the industry was soon transferred to the Alipore jail, where it has since been carried on. The Lieutenant-Governor has recently in a separate Resolution reviewed the results of the scheme during the first two years of its operation, considering the sales month by month in juxtaposition to the corresponding monthly returns of mortality from fever, and district by district relatively to the prevalence of fever. The figures furnished in this report supplement the information then before Government and further establish the success of the scheme. At the Alipore central jail the industry has given daily employment to 17·5 adolescents. The number of powders filled and packed was 2,917,526, and the cash and credits realised amounted to Rs. 31,832-13, as compared with Rs. 18,077-12 in 1893. The total number of post offices supplied increased from 2,272 to 2,321, and the profits amounted to Rs. 5,091. This surplus should either be absorbed in providing a better description of paper for the envelopes, or in allowing a higher commission to postmasters and other agents for sale.

24. *Subsidiary Jails.*—There were 85 subsidiary jails, the number remaining the same as during the previous year. Nine of these are reported not

to have been visited the prescribed number of times by the Subdivisional Officers. The Lieutenant-Governor notices that the Khond Mahal, Gai-banda, Howrah, Buxar, and Madhubani jails again appear in this list, in spite of the orders passed in last year's Resolution, and requests that the District Magistrates concerned will take measures to see that such neglect does not recur. The number of convicts fell from 16,843 to 16,130, the daily average confined also decreasing from 377 to 363. Of 12 civil prisoners confined in subsidiary jails during the year, 6 were released and 6 transferred. Nineteen escapes were effected by convicts and under-trial prisoners during the year, as compared with 12 in 1893 and 18 in 1892. Of 11 convicts who escaped, 9 were recaptured. The total expenditure on subsidiary jails fell from Rs. 1,10,027 to Rs. 1,09,923; while the average cost per prisoner remained about the same. The net profits from manufactures rose from Rs. 4,183 to Rs. 4,238.

25. *Scales of diet.*—Early in the year the sickness prevalent in the Midnapore Jail attracted the attention of Government and led to the sanction of full labouring diet to the prisoners of that jail, as well as of 24 subsidiary jails selected as receiving prisoners in an ill-nourished condition. Special attention was directed by Superintendents and medical officers during the year to the subject of diet scales, resulting in the substitution of a better quality of food and in other improvements. The jail gardens have in most cases been able to supply an abundance of good vegetables and condiments, and jailors have been encouraged to give nutritious vegetables to the fullest extent as an addition to the ordinary diet. The cultivation of crops within the inner enclosure of jails has been discouraged, and the more sanitary system of extra-mural cultivation adopted where sufficient space is available.

26. *Water-supply.*—Dr. Comins has furnished an interesting account of some of the many improvements effected and undertaken in this direction during the year; and the Lieutenant-Governor invites a still fuller report in future years of all that has been done towards this reform with the importance of which he is glad to see that the Inspector-General is as deeply impressed as His Honour himself is. Attention has been paid during the year to all the branches of this question, the source of the supply, the manner in which it is brought into the jail, the system adopted for boiling and for filtering it, and the measures taken for its distribution to the cook room and the wards, without manual contamination. The annual chemical analysis of the water used in jails has been carried out. Four of the central jails—Alipore, Presidency, Bhagalpur, and Dacca—and three district jails—Burdwan, Darjeeling, and Arrah—are already supplied by direct communication from the water-works of the town. Other jails, not so fortunate, derive their water-supply from rivers or tanks, by pump or otherwise, but the majority of small jails still draw their water from wells inside the premises. Dr. Comins summarises the measures taken in this important matter as follows:—

The supply of pumps to jails requiring them has been continued, and the Alipore Jail has commenced to manufacture and send out powerful pumps. As first attempts they have proved somewhat clumsy and hard to work, but these defects will disappear with more experience, and it will be a great advantage to be able to manufacture pumps, the largest of which are expensive articles to purchase. Tube wells have been purchased and supplied, but have failed in some instances. They have done well in Purnea, Dumka, and Rangpur; and will, I think, be valuable for sandy soils. The water-lift invented by Mr. Larymore has also been sent to some jails. The piping for drinking water has been extended and hydrants set up, pumps connected by pipe with patent boilers and filters. The Alipore patent boiler has been supplied and set up in other jails, and there are few jails now which do not possess one. At the Alipore Jail a masonry reservoir to hold 14,000 gallons has been made, which will hold two days' supply in case of any accident to the main or at the pumping station. The large masonry reservoir and settling tank at Arrah have been arched over. Other improvements effected during the year are the supply of water-tight covers to wells, iron water-carts, cans for distribution especially constructed to avoid contamination by hand, iron drums with padlock and tap for hospitals and sleeping wards for the cleanly storage of drinking water, pipes with taps over the cooking cauldrons obviating the necessity of carriage by hand. At Krishnagar a new well has been dug, and a patent boiler and filter are in process of erection, connected by pipes with the cookshed. At Arrah the wells not in use are being filled up, there being no further use for them now that the municipal water is introduced. The best method of filtration has continued to receive attention, and several new filters have been tried. A masonry filter of a new type is under construction at the Chapra Jail. Messrs. Bolton and Company have erected one of their filters as an experiment at the Buxar Jail.

Government has recently issued instructions to try the Pasteur-Chamberland filter at two of the jails which have shown the worst mortality during the year—Motihari and Naya Dumka. If the accounts of this filter are justified by the result, we may hope to find through it a solution of the great and difficult problem of providing a perfectly pure supply of drinking water, an object which has received the closest attention of Government and of the Jail Department for many years, though not hitherto with any complete success.

27. *Clothing*.—Medical officers have freely exercised the discretion given them of increasing the supply of clothing. The improvement of ventilation has also received consideration, and an important work with this object undertaken in opening up by arches the main building in the Presidency Jail.

The remarks made in paragraphs 90—95 of the Report appear to the Lieutenant-Governor to be appropriate and judicious. Sir Charles Elliott cordially endorses the passage quoted below, and desires to record his warm commendation of the humane and zealous attention which Dr. Comins and his subordinate officers have paid to the health of the prisoners under their charge.

There is, I think, no detail connected with the daily life of prisoners in jail which has not been carefully considered and improved where possible with such funds as were available. The health of the prisoners has been bad during the year, but it is not for want of attention on the part of Medical Committees, the detailed reports of which have been forwarded to Government, and of jail officers who have throughout the year been sparing themselves no trouble and the Government no expense, not only to counteract the unusual bad health prevailing during 1894, but with the view of permanently reducing the sickness and mortality in Bengal jails. The reports on the extreme unhealthiness prevailing among the general population submitted by the Civil Surgeons of districts and the Medical Officers of jails show with what exceptional difficulties they had to contend.

The system of granting gratuities to Civil Hospital Assistants for especially good service has been continued, and Rs. 3,794-13-9 expended in this way during the year, as compared with Rs. 4,006-5-9 spent in 1893. A decrease is noticed, although considerably heavier duties have devolved upon this class of officers during 1894 on account of the prevalence of sickness.

28. *Sickness and mortality*.—The following table shows the mortality among prisoners for each year as well as for each decade from 1844 to 1894:—

YEAR.	Daily average number of prisoners.	Daily average sick.	Ratio per mille of daily sick.	NUMBER OF DEATHS—			DEATH-RATES PER MILE OF AVERAGE STRENGTH—			REMARKS.
				From cholera.	From all other causes.	Total number of deaths.	From cholera.	From all other causes.	From all causes.

Average ... ..	37,948	766	43.5	207	862	1,169	11.5	53.6	65.1	

From this statement it will be observed that although the death-rate for the year under report is considerably less than the average for the past 51 years, and than the averages of the first four decades of this period, it is higher than in any year since 1885. In this respect it corresponds with the deterioration in the health of the free population throughout the province. The Sanitary Commissioner's report shows that the general death-rate for Bengal was 34.88 in 1894, against 28.21 in 1893. Cholera was much more prevalent than in the preceeding year, but the principal cause of disease and death was malarial fever which was extraordinarily prevalent in consequence of the late rain of 1893, and the heavy downfall of 1894. It is not to be wondered, therefore, that the jail returns of mortality should be disappointing, and the continuity of the decrease which has occurred with more or less steadiness during the last fifteen years should have been broken. The death-rate per mille rose from 32.3 to 47.1.

The daily average number of sick among prisoners of all classes rose from 642 in 1893 to 744 in 1894, while the proportionate number of admissions to hospital rose from 1,046 to 1,234. It is however pleasing to note that a remarkable improvement has occurred during the first four months of the present year. In January 1895 there were 29 deaths among convicts against 59 in January 1894, in February 1895, 31 deaths against 46 in 1894; in March 1895, 26 deaths against 32, the healthiest month of the year 1894; and in April 1895, 38 deaths against 57 in 1894.

29. *Principal diseases causing sickness and death.*—The following table shows the principal diseases from which prisoners suffered during the year:—

DISEASES.	Number of admissions to hospital.	Deaths.	Ratio per mille of deaths to admissions.
Dysentery and diarrhoea ... ..	6,107	314	51.41
Intermittent fever ... ..	5,583	4	0.72
Remittent and continued fever ... ..	1,007	24	23.8
Other fevers ... ..	32	4	...
Respiratory diseases ... ..	900	105	116.6
Anæmia and general debility ... ..	625	60	96.0
Ulcers and boils ... ..	375	...	...
Scrofula and phthisis ... ..	150	71	473.3
Cholera ... ..	110	65	590.9
Small-pox ... ..	2	...	...

With the exception of intermittent fever and small-pox, there has been a rise in admissions under all diseases. The former hardly appears as a cause of death. Numerous admissions from remittent fever indicate the prevalence of the severer forms of malarial fever. The greatest increase is under the head dysentery and diarrhoea—an increase of 10·76 per cent. This disease continues to be the most prevalent and fatal in the jails of Bengal. Dr. Comins cites the opinions of many medical officers that malaria is a strong predisposing cause to dysentery. Dr. Buchanan, the Officiating Superintendent of the Bhagalpur Jail, says:—

“Dysentery, diarrhoea, anaemia, debility, scurvy, dropsy, enlarged spleen, malarial cachexia.—These are the eight chief diseases of jails all over India.....There is one common factor in all these diseases, viz. malaria. As regards jail mortality I am inclined to regard cases returned as deaths under these headings as having been practically identical in their clinical history. One or other disease or symptom may have been predominant. I must not be understood to say that diseases are identical, but I maintain that among fatal cases in jails it is often a matter of chance under which of these diseases the death is recorded, for the majority of fatal cases show a mixture of all the above in greater or lesser degree.”

Among the free population of the districts the chaukidar, who is the reporter of deaths, would probably return all such deaths under the generic term, fever. It has often been remarked that more people die of dysentery in jail than among the free population, where it is a very uncommon cause of death, as shown by the mortuary statistics, and Sir Charles Elliott has little doubt that the true explanation is indicated here.

Dr. Comins adverts to the difficulty experienced by many Superintendents and Medical Officers of suppressing various methods of artificially inducing bowel-disorders which are frequently resorted to as a means of obtaining the freedom and privileges of the hospital. His experience agrees with what Sir Charles Elliott learnt when recently visiting Midnapore, where it was found necessary to exterminate croton plants, which ornamented the garden walks, because the prisoners plucked and ate the leaves in order to induce diarrhoea.

“In considering the mortality in jails in recent years,” Dr. Comins remarks:—“it must be remembered that influenza, a potent cause of present sickness and after depression of vitality, has been with us for some five years, whereas previous to this it was unknown to the present generation. The direct mortality from this cause is not great, but it has a weighty and long-continued influence in the general lowering of the standard of health and weight and in hastening the issue of other diseases, such as tubercle of the lungs.”

The number of admissions from cholera rose from 54 cases with 20 deaths in 1893 to 40 cases with 65 deaths in 1894. At Gaya 31 cases occurred, at Chaibassa 25. The outbreak at Gaya was the subject of a special report to Government, in which the figures shewed that superior immunity was enjoyed by those who had been protected by inoculation; and the Lieutenant-Governor issued orders authorising the Inspector-General to introduce inoculation on Professor Haffkine's system by the medical officers in charge of jails in cases where an outbreak of cholera has actually occurred and where the prisoners accept it voluntarily. The total number of deaths among convicts (including 13 moribund prisoners released under rule 488 of the Jail Code) was 754, against 541 in 1893. Of the 740 convicts who died in jail, 237, or 32·27 per mille, were received into jail in good health, and 232, or 31·35 per mille, in indifferent health, and 271, or 36·22 per mille, in bad health. These figures carry an important significance. Moreover, the number of deaths among under-trial prisoners increased in a much greater proportion than that among convicts, and is nearly double of that recorded in the previous year.

A Committee was appointed by this Government in October 1893 to visit and report upon certain selected unhealthy jails in the province. The committee so appointed visited ten jails—Dinajpur, Rangpur, Jalpaiguri, Jessore, Mymensing, Arrah, Chapra, Malda, Purnea, and Puri—and submitted full and detailed reports; and most of the recommendations made, have already been carried into execution.

The following table shows the particulars of prisoners transferred to selected jails for the benefit of their health since June 1892:—

	Prisoners suffering from ill-health admitted from un-healthy jails.	Died.	Released.	Transferred to other jails.	Gained weight.	Lost weight.	Remained stationary.
1	2	3	4	5	6	7	8
Bankura ...	206	18	72	44	115	38	8
Suri ...	74*	12	23	18	52	7	2
Hazaribagh ...	33	2	0	6	18	10	3
Gaya ...	60	5	27	8	39	6	10
Darbhanga ...	26	1	4†	...	13	7	3
	300	35	135	70	269	68	26

\* One escaped. † Two moribunds released.

The reports of medical officers indicate that although on the whole the system has justified to a great extent the hopes formed, that prisoners in whom organic disease is not far advanced generally improve at these selected jails, and that in fact many lives have been thus saved by transfer from malarious districts, there is danger in the transfer of other prisoners whose disease may be unchecked or even aggravated by the change. It is hoped that the lessons taught in this respect will be carefully noted and will guide medical officers in making selections for transfer in future.

30. *Jails with highest mortality.*—The following table shows the jails in which the highest mortality occurred, with the corresponding figures for the previous four years:—

JAILS.	1894.		1893.		1892.		1891.		1890.	
	Deaths from all causes.		Deaths, exclusive of cholera.		Deaths from all causes.		Deaths, exclusive of cholera.		Deaths from all causes.

\* There was a subsidiary jail at Naya Dumka before 1891.  
† Baranasi was a subsidiary jail before 1893.

The mortality of the Chaubassa Jail has recently been the subject of enquiry by a Committee of Medical Officers. Their report has not yet been received by Government, but the continuance of cholera leads the Lieutenant-Governor to think that there must have been some neglect to thoroughly disinfect the jail before it was again used when the cholera camp was broken up. At Dumka, out of nine deaths in jail, five prisoners were feeble old men between 60 and 75 years of age, and four prisoners admitted in bad health, or moribund, were sent straight to hospital. At Daltanganj the mortality is almost entirely due to an

outbreak of cholera. At Balasore a Committee of Medical Officers have reported that a great proportion of the deaths were independent of jail life. The mortality at Chapra is accounted for by the increased sickness from all causes in the district. At Motihari the fluctuations in the death-rate per mille during the last five years have been remarkable. In 1890 it was 26·2, in 1891, 14·2, in 1892, 60·9, in 1893, 22·8, while in 1894 it has risen to 88·2. Probably there may be some cause of pollution to the water-supply, and the Lieutenant-Governor trusts that the recently ordered Pasteur-Chamberland filter may be of especial use here; if other causes are at work, the question should be thoroughly considered by the Committee which is about to inspect this jail. In the Presidency (*European*) and Khulna jails, with an average convict population of 34·08 and 30·08, respectively, there were no deaths. Next in order of lowest mortality stand Krishnagar (6·9), Chittagong (7·0), and Berhampore (8·6).

31. *Inspections*.—Dr. Comins was absent from head-quarters on inspection and committee duty for 141 days in the year, and inspected 32 central and district jails and 10 subsidiary jails. The total number of inspections paid by non-official visitors fell from 107 to 89, but the number of visits paid by judicial and magisterial officers rose from 2,143 to 2,235. The Lieutenant-Governor inspected seven Central or District Jails, besides several subdivisional lock-ups.

32. *Officers of the Department*.—Dr. Comins thankfully acknowledges the minute care and attention devoted by the officers of his department to improvement in the conditions of life of the prisoners during an exceptionally trying year. Among the officers specially commended are:—Dr. R. Macrae at Gaya, Dr. A. H. Nott at Hazaribagh, Dr. U. C. Mukerji at Bankura, Mr. C. H. C. Sevenoaks and Dr. P. O'Gorman at Midnapore, Dr. E. Bovill for his work at Bankipore, and Mr. A. D. Larymore. Mr. Larymore has continued to show his inventive skill by the manufacture of alarm signals and ranges for hospital kitchens, and has lately been devising improvements in filters and experimenting, in collaboration with Dr. Evans, the Chemical Examiner to Government, on the relative efficiency of filtering media.

Sir Charles Elliott desires in conclusion to record his high appreciation of Dr. Comins' services. His report is able and full, and testifies to the special care which he has devoted to all matters concerning the health of the prisoners and the preservation of their lives. This undoubtedly is the first object to be arrived at, and till it is more effectually secured than now, Sir Charles Elliott does not complain that the second object—the ensurance of really punitive labour—is somewhat overlooked, or receives less consideration than it deserves. But if the time comes when the prisoners are in a less unhealthy state on entering the jail, and when we can ensure a pure water-supply and other healthy conditions within the jail, undoubtedly we ought to realise larger results from their labour.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Inspector-General of Jails for information and guidance.

• Ordered also, that a copy of this Resolution, and a copy of the Report, be submitted to the Government of India, in the Home Department.

• Ordered also, that a copy of this Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

*Chief Secretary to the Govt. of Bengal.*

**RESOLUTION ON THE ANNUAL REPORT ON THE POLICE  
ADMINISTRATION OF THE TOWN OF CALCUTTA AND  
ITS SUBURBS FOR THE YEAR 1894.**

No. 119J.D.

**RESOLUTION.**

POLICE.

*Dated Darjeeling, the 7th June 1895.*

**READ—**

The Annual Report on the Police Administration of the Town of Calcutta and its Suburbs for the year 1894.

**Read also—**

The Reports for the two previous years and the Resolutions recorded thereon by Government.

Sir John Lambert, K.C.I.E., was in charge of the police of the town of Calcutta and its Suburbs throughout the year, with the exception of one month (from the 16th October to the 15th November), during which period Mr. A. B. Barnard, Deputy Commissioner, officiated for him. Mr. Barnard was on furlough from the 22nd March 1893 till the 22nd March 1894. During his absence Mr. H. E. C. Paget acted for him as Deputy Commissioner.

2. The total number of offences, cognizable and non-cognizable, reported in the town of Calcutta and its suburbs during 1894 and the four preceding years, is shown in the following table:—

	1890	1891.	1892.	1893.	1894.
Town ... ..	44,873	48,569	47,765	36,552	41,512
Suburbs ... ..	12,669	11,871	11,172	11,242	13,014
Total ....	61,542	60,440	58,937	47,794	54,526

The total number of cases is still much less than in the four years preceding 1893 when the figures were abnormally low. There has, however, been an increase of 4,960 cases in the town and 1,772 in the suburbs, or 6,732 cases in all. Of this increase, 6,044 cases fall under the category of miscellaneous offences, viz., street offences, 1,163 cases; cruelty to animals, 2,272 cases;

Nature of offences.	Increase in cases.
Miscellaneous, cognizable	2,541
Ditto, non-cognizable	3,508
Penal Code, cognizable	243
Ditto, non-cognizable	445

municipal prosecutions, 2,274 cases; and offences under the Hackney Carriage Act, 1,066 cases, while 658 only come under the Penal Code. The table in the margin illustrates the nature of the increase according to cognizable and non-cognizable crime under miscellaneous and Penal Code offences.

2. The following table shows separately the results of cognizable and non-cognizable cases, and also the division of work between the Courts in the town and suburbs during the year:—

COURT.	CASES INITIATED.			CASES TRIED.				NUMBER OF CASES ENDING IN CONVICTION.			
	Cognizable cases sent up by the Police.	Cognizable cases taken up by the Magistrate direct.	Non-cognizable cases.	Cognizable cases sent up by the Police.	Cognizable cases taken up by the Magistrate direct.	Non-cognizable cases.	Total.	Cognizable cases sent up by the Police.	Cognizable cases taken up by the Magistrate direct.	Non-cognizable cases.	Total.
1	2	3	4	5	6	7	8	9	10	11	12
Northern Division Court	10,017	622	2,696	10,312	371	792	11,475	10,068	233	455	10,756
Southern Division Court	9,257	570	2,109	9,012	429	883	10,324	8,780	304	901	9,645
Bench Court	600	205	12,940	604	221	11,325	11,140	522	55	3,433	4,010
Total	20,774	1,497	17,735	10,918	1,021	12,000	32,939	19,368	683 by Magistrate 38 by High Court	4,499 by Magistrate 5 by High Court	24,411 by Magistrate 43 by High Court
Northern Division Suburban Court.	3,677	48	3,375	3,321	46	2,276	5,943	3,465	8	1,172	4,645
Southern Division Suburban Court.	3,062	44	2,605	3,006	34	737	3,777	2,917	2	691	3,550
Total	6,739	92	5,980	6,327	80	3,013	9,720	6,382 by Magistrate 17 by Sessions	10 by Magistrate .. by Sessions	2,103 by Magistrate 2 by Sessions	8,495 by Magistrate. 19 by Sessions.

3. The total number of cases tried in the town and suburbs during the year was 42,559, of which 32,963 ended in conviction. Out of 27,513 cognizable cases sent up by the police, convictions were obtained in 25,707, or 93·4 per cent.; while out of 1,549 cognizable cases taken up by the Magistrates direct, convictions were obtained only in 662, or 42·7 per cent. The small ratio of convictions in the latter class of cases is ascribed to the fact that the complainants obtained processes in haste, and afterwards came to an amicable settlement. The percentage of convictions in cases sent up by the police is highly creditable to the work of the force. The increase under Penal Code offences occurred under unimportant sections, chiefly of nuisances, while a decrease is observable under almost all heads of serious crime. Excluding offences under class VI (*Other offences*), the figures of true crime for the three years 1892, 1893, and 1894 are 3,232, 3,326, and 3,225, respectively. The total number of arrests under all heads in the town and suburbs rose from 35,981 to 38,342, the ratio per cent. of convictions to arrests remaining almost the same, viz., 91 per cent. The increases occurred under minor heads as explained above. The large number of arrests for cruelty to animals indicates increased vigilance on the part of the Society for its prevention.

4. *False cases.*—Fifty-five false cases were brought in the town and 19 in the suburbs, compared with 71 and 28, respectively, in 1893. Compensation was awarded to the extent of Rs. 279 in 19 cases in the town, and Rs. 15 in two cases in the suburbs, or an average of Rs. 14 in all 21 cases.

5. *Property stolen and recovered.*—Property to the value of Rs. 1,83,787 was stolen in the town and suburbs during the year, compared with Rs. 1,27,776 in the previous year; and Rs. 1,25,215 worth, or 68·14 per cent., was recovered, against Rs. 92,938, or 72·73 per cent., in the previous year.

6. *Cognizable offences in the town.*—The number of true cognizable cases reported within the town rose from 21,232 in 1893 to 23,755 in 1894. Under classes I to VI there was a decrease of 586, while special and local laws account for an increase of 3,109 cases. The increase occurred principally under the following heads:—cruelty to animals (1,863), street offences (1,194), public and local nuisances (270), and other offences under the Police Act (153). Cases under the Hackney Carriage Act have, under the recent Act, been transferred to the returns of non-cognizable crime; and hence a decrease of 860 cases under this head.

There were nine cases of murder during the year, or the same number as in 1893. In two cases the offenders were transferred to other districts for trial; in two cases the murderers committed suicide, and in the five remaining cases four offenders were hanged, and one was transported for life. There were four cases of culpable homicide, three of which resulted in conviction; in the fourth case a second officer of a vessel was charged with having caused the death of the ship's boy by a long course of ill-treatment on the high seas, but was discharged on the evidence of the ship's doctor that the boy died of meningitis brought on by malarial fever. There was only one case of concealment of birth, and the evidence was insufficient to sustain a prosecution. The number of cases of grievous hurt fell from 35 to 31. There were four cases of administering drugs compared with no case in 1893, and four cases in 1892. Of these, three cases were very similar in nature, the victims being prostitutes, who were drugged with *dhatara* disguised in milk, with the object of stealing their ornaments, and all three cases resulted in conviction. There has been a large decrease in cases of hurt by dangerous weapons, 31 cases having occurred in 1894 against 55 in 1893, and an average of 43 in the five preceding years. Of 41 persons arrested in connection therewith, 27 were convicted. Twenty cases of kidnapping occurred. Of these, 17 were instituted on complaint made direct to the Court, none of which ended in a conviction, and three were sent up by the police, in two of which the offenders were convicted. Out of 64 persons placed on their trial for using criminal force to public servants or to females, 48 were convicted. There were two highway and four other robberies. Burglary and lurking house-trespass show a slight increase in number of cases, but a decrease in the amount of property stolen. On the other hand, thefts were less numerous than in 1893, but the amount of property stolen exceeded that shown in any of the five previous years. Out of 1,489 true cases of theft; 867 were detected and 943 persons convicted—an improvement over the average of the four years preceding; and the percentage of property recovered was 68·38, against an average of 65·77 for the same period. In 324 cases of criminal breach of trust, 249 persons were placed on their trial, and only 67 convicted. The Commissioner of Police says that in these cases settlements are usually made out of Court. In one case a post-office delivery peon was sentenced to three years' rigorous imprisonment for misappropriating Rs. 100, the amount of a money order entrusted to him for delivery. Out of 625 persons sent up under the Gambling Act, 597 were convicted, only one of whom was sentenced to a term of imprisonment. In cases of cruelty to animals, out of 6,898 persons arrested, 6,723, or over 97 per cent., were convicted. In street offences 9,521 persons, out of 9,706 placed before the Magistrate, or over 98 per cent., were convicted. These figures are highly satisfactory.

7. *Non-cognizable offences in the town.*—The number of offences reported true under the Penal Code and under special and local laws were 4,403 and 13,321, against 4,464 and 10,804, respectively, in 1893. While there was a decrease of 61 in Penal Code cases, there was an increase of 2,517 in cases under other laws. This increase occurred almost wholly under municipal laws (1,644 cases), and under the Hackney Carriage Act (802 cases). Of the municipal cases, the larger number were as usual instituted under section 90 of Act II (B.C.) of 1888, for exercising a trade or profession without a license.

Sir John Lambert describes how a new form of fraud, which has appeared of recent years in Calcutta, viz., cheating by bogus firms, is practised. The proprietors of these swindling establishments are all Bengalis, who adopt the names of European firms. They advertise widely in remoter parts of the country, stating that their terms are cash, and giving in some cases a fictitious address, and in other cases the private address of one of the conspirators, arrangements always being made with the local post-office to keep all letters and money-orders till called for.

8. *Cognizable offences in the Suburbs.*—The number of true cognizable cases rose from 6,733 to 7,016. The increase is almost entirely under special and local laws, and is due to greater activity in prosecutions under the Cruelty to Animals Act. There were four cases of murder, against seven in 1893; in three a sentence was passed of transportation for life; in the fourth case the accused has hitherto evaded arrest. Of 18 cases of grievous hurt, convictions were obtained in 13.

One case of drugging was reported, in which one Rāmo Dosāḍ, a cooly, was administered some *dhatūra* mixed in sweetmeats on the road, and robbed. Seven cases of kidnapping occurred, all being instituted on complaint direct to the Court, and none ending in conviction. One case of robbery, in which a ship's lascar attempted to throttle, and robbed, a little girl, ended in a sentence of 48 months' rigorous imprisonment. There were only 65 cases of burglary and lurking house-trespass, against an average of 106 cases during the four preceding years. The decrease in property stolen is even greater, from an average of Rs. 4,579 to Rs. 1,331.

9. *Non-cognizable cases in the Suburbs.*—During the year 5,979 cases occurred, showing an increase of 1,498 cases, chiefly under the Municipal and Hackney Carriage Acts. There has also been an increase of 422 cases of hurt and criminal force, which has not been noticed. One case of considerable importance of criminal breach of trust by a public servant occurred: a fraud involving a large loss to Government was discovered to have taken place in the Alipore Post-office, and two employes were placed on their trial, one of whom has subsequently been sentenced to seven years' rigorous imprisonment.

10. *Suicides and accidental deaths.*—There were 69 cases of suicide in the town and suburbs, against an average of 84 in the preceding three years. Of this number, 41 were of males and 28 of females. Two hundred and eighty-eight accidental deaths occurred during the year, against 349 in 1893. Thirty-two persons were run over and killed by vehicles, but no fatal case occurred in which rashness or negligence was established. One hundred and one persons were prosecuted for rash and furious driving, of whom 89 were convicted, compared with 38 prosecutions and 34 convictions in 1893. Twelve Europeans and 41 natives were drowned in the port of Calcutta.

11. *Working of the Arms Act.*—The number of fire-arms of all descriptions in stock at the commencement of the year was 2,538. Three thousand and twelve were imported, and 1,913 purchased in India; while 1,050 were sold under transport licenses, and 3,858 sold locally, leaving a balance of 2,555 at the close of the year. Of 11 persons charged with offences under the Act, nine were convicted and two acquitted.

12. *European Vagrancy Act.*—Fifty-one vagrants were admitted into the Government Work-house, against 50 in 1893. Of this number, 44 were declared vagrants in Calcutta, and 7 were sent by District Magistrates. Eight remained in the Work-house at the end of 1893, making a total of 59. Of these, 27 were discharged, 5 released, and 9 absconded. Eight persons besides were transported from British India under the provisions of section 17 of the Act.

13. *Fire-brigade Act.*—The steam-engines of the brigade were employed at 32 fires, compared with 28 in 1893. Eighty-four other petty fires occurred, at 15 of which assistance was rendered by the brigade, and at 69 by the out-station staff and manual engines. The total loss of property from fires during the year is estimated at Rs. 8,84,976, as compared with Rs. 6,10,524 in 1893. Four fires occurred in which property worth over a lakh was lost—one on board the flat *Bannu*, laden with jute, one at the Hydraulic Jute Press at Chitpore, and two at the Howrah Mills, Sibpur, in buildings filled with jute. The most serious of these was that at the Hydraulic Jute Press at Chitpore, whereby property to the value of Rs. 2,27,000 was destroyed. Three lives were lost at fires during the year.

14. *Constitution of Police Force.*—The total strength of the force was 2,889, against 2,873 in 1893, an increase of 16 men having been made in the Government guards. There were 306 casualties, showing a percentage of 10.59, against 8.38 in the previous year. Seven members of the force were punished judicially, compared with 18 in 1893 and 11 in 1892; 82 were dismissed, 1 deserted, and 26 died. The total cost of the force was Rs. 6,20,799, as compared with Rs. 6,18,681 in 1893, showing an increase of Rs. 2,118. The increase occurred chiefly under the head of exchange compensation allowance.

The Commissioner of Police reports that there was some improvement in the general health of the force: admissions to hospitals were 2,305, against 2,406 in 1893. Towards the close of the rainy season, however, many of the constables in the unhealthy tracts of the suburbs were rendered unfit for duty by malarial fever, and a special extra allowance of Re. 1-8 per mensem was

temporarily granted with the sanction of Government in the same way as was done in the previous year.

15. *Rewards*.—Rupees 3,498 were disbursed as rewards in the town and suburbs, against Rs. 3,242-12 in 1893. Of this sum, Rs. 1,415 were paid by private individuals. In all 208 officers were rewarded, of whom 83 were informers and 68 constables, and the remainder officers of higher grades. In accordance with the orders conveyed in last year's Resolution, the Commissioner of Police has furnished more information regarding the distribution of rewards, but the Lieutenant-Governor would be glad to see some further details given as to the nature of the more important cases in which rewards were granted, and the amounts given.

16. *Anthropometry*.—During the past year 405 persons arrested for offences against property, whose antecedents were unknown to the local police, were anthropometrically measured, and previous convictions thereby traced against 31 of them. Besides these cases, the measurements of 394 habitual offenders were taken and recorded in the Anthropometrical Department of the office of the Inspector-General of Police. Sir Charles Elliott is pleased to receive this further assurance of the practical utility of this system.

During the year, 7,646 persons were confined in the Police Lock-up, against 6,571 in 1893. Of these, 3,057 were for drunkenness, and 4,589 for other charges. There has been a large increase of 45 per cent. in cases of drunkenness. It is observed that 77 per cent. of such cases were natives, against 65 per cent. in 1893.

17. *Judicial Work*.—Mr. Marsden held the office of Chief Presidency Magistrate from the 1st January till the 1st May, when he retired from Government service. Mr. Pearson, who was appointed to succeed him, held the office during the remainder of the year. Nawab Syud Ameer Hossein, C.I.E., was in charge of the office of Presidency Magistrate, Northern Division, for the greater part of the year; the Hon'ble Maulvi Abdul Jabbar, Khan Bahadur, acting for him from the 10th April to the 30th June, and again from the 24th September till the 31st October.

18. *Court of the Chief Presidency Magistrate*.—The total number of cases instituted in this Court was 11,936, as against 10,431 in 1893. Of 14,697 persons concerned in these cases, 13,560 were convicted, 1,083 acquitted or discharged, and 32 were under trial at the end of the year. Of 4,949 persons charged with offences under the Indian Penal Code, 4,391 were convicted; 2,942 persons were prosecuted for cruelty to animals, of whom 2,792 were convicted; 3,679 were prosecuted for public and local nuisances, 3,847 for miscellaneous offences in the streets, 1,537 under the Port Act, and 204 for gambling. The total amount of fines imposed was Rs. 24,477, out of which Rs. 21,544 were realised. Appeals were preferred against the order of the Court in 34 cases, which were rejected in every instance. The High Court was moved in 10 cases. In 5 cases the applications were summarily rejected, in 1 case the rule was discharged, in 3 the orders were set aside, and in 1 the conviction was upheld, but the sentence modified. Only 4 cases were declared to be false, frivolous, or vexatious during the year; and compensation to the extent of Rs. 70 was awarded, in two cases under section 552, Criminal Procedure Code, in one case under section 560, Criminal Procedure Code, and in one case under section 58 of the Hackney Carriage Act.

19. *Northern Division Court*.—In this Court the number of cases instituted rose from 12,660 to 14,225. In these cases 15,969 persons were brought to trial, of whom 14,886 were convicted, 1,016 acquitted or discharged, and 18 remained under trial at the end of the year. Thirty-six persons were committed in 27 cases to the Court of Sessions, of whom 33 were convicted and three discharged—a result which is highly satisfactory. Of 15,938 persons actually tried or committed, 14,919, or the remarkable percentage of 93.6, were convicted. Of 3,804 persons prosecuted for cruelty to animals, 3,791 were convicted. The total amount of fines imposed was Rs. 25,628-8, of which Rs. 22,074-8 were realised. Rupees 30 were paid as compensation in six cases under section 552, Criminal Procedure Code, and Rs. 10 in one case under section 560, Criminal Procedure Code. During the year 77 appeals were preferred against the order of the Court, with the

result that 75 were rejected, and in two cases only the sentence imposed was reduced by the High Court. In seven cases the High Court was moved; in four the rule was discharged, in two the order set aside, and in one a re-trial ordered.

20. The Lieutenant-Governor has commented in the Resolutions of the two previous years upon the large difference between the number of persons

NAME OF COURT.	Number of persons against whom process issued.	Number of persons actually appearing.	Acquitted or discharged.	Convicted.	Percentage of persons appearing to processes issued.
1	2	3	4	5	6
Chief Presidency Magistrate	2,311	1,252	458	776	54.00
Presidency Magistrate, Northern Division.	4,278	3,087	520	540	24.94
Honorary Presidency Magistrates.	13,140	10,935	7,270	3,611	83.22
Total ...	19,729	15,254	8,248	4,957	67.18

Northern Division Court is still as low

Serial number.	NATURE OF OFFENCE.	Number of persons against whom process issued.	Number of persons actually appearing.	Acquitted or discharged.	Convicted.
1	2	3	4	5	6
15	Hurt ...	607	57	40	17
17	Criminal force ...	1,302	134	77	57
21	Mischief ...	108	12	8	3
26	Intimidation and insult...	1,004	115	110	5
Total ...		3,021	318	235	82

from these figures that a judicious discretion has always been used in the issue of such processes. From the reports submitted it appears that adjournments took place in 212 police cases before the Chief Presidency Magistrate, chiefly on the application of the Police, in 11 of which cases the adjournments were six or more in number. In the Court of the Presidency Magistrate, Northern Division, adjournments were made in 185 police cases, six cases being adjourned six times or more; while 34 police cases were adjourned by the Bench Courts. In the Court of the Northern Division, 35 adjournments out of a total of 372 were made by reason of pressure of work or want of time. No information has been given regarding the detention of witnesses.

22. *Work of Honorary Magistrates.*—Exclusive of municipal cases, 1,159 cases were transferred to the Bench Magistrates, 934 to Honorary Magistrates sitting singly, and 1 case was taken up by the Honorary Magistrates *motu suo*, making a total of 2,094 cases. Of these, 1,555 were under the Penal Code, 65 under the Code of Criminal Procedure, and 474 under local laws, compared with 1,582, 35 and 295, the corresponding figures for 1893. In 1,905 cases actually brought to trial, 2,844 persons were concerned; 1,456 were convicted, 1,356 acquitted or discharged, and 32 remained under trial. Rupees 6,126-6 were imposed as fines, of which amount Rs. 5,476-5 were realised. Ten cases were declared false, frivolous, or vexatious. Rupees 129 were granted as compensation, in two cases under section 552, Criminal Procedure Code, in seven cases under section 560, Criminal Procedure Code, and in one case under section 58 of the Hackney Carriage Act. Nine appeals were preferred, in all of which the order of the Court was upheld; and in 11 cases in which the High Court was moved, the conviction was set aside in one case only.

against whom processes were issued and the number who actually appeared in Court. The statement in the margin shows the result in this respect in non-cognizable cases separately for the Court of the Chief Presidency Magistrate, the Northern Division Court, and the Bench Courts, during the year under report. It will be seen that although on the whole a marked improvement has taken place in the percentage of persons appearing, to persons against whom process issued, from 51.5 per cent. to 67.2 per cent., the proportion in the case of the

Taking four serial numbers of offences, viz., hurt, criminal force, mischief, and intimidation and insult, tried in this Court, the result, as will be seen from the figures in the margin, is even more striking. Out of 3,021 persons against whom process issued in these cases, only 318, or 10.52 per cent., appeared; while out of 1,004 persons against whom process issued for intimidation and insult, only 115 appeared, and of those who appeared, only 5, or 4.3 per cent., were convicted. Sir Charles Elliott is not satisfied

11,702 Municipal prosecutions under Act II (B C.) of 1888 were instituted, against 10,121 in 1893, the increase being chiefly in cases under section 90 of the Act. Of these cases, 2,453 were struck off and 9,249 brought to trial. 2,966 persons were convicted, against 2,656 in 1893, while 6,283 cases resulted in acquittal or discharge, against 3,051 in the preceding year—a difference which should have been explained. Fines were imposed to the extent of Rs. 16,261-2-0, as compared with Rs. 13,288-13 in the previous year, and Rs. 13,241-7-9 were realised.

23. The Lieutenant-Governor is glad to read the testimony again borne to the excellent services rendered by the Honorary Magistrates of Calcutta. The Chief Presidency Magistrate remarks that their efficiency would be greatly enhanced if the Courts could always sit punctually at the appointed hour, and if Honorary Magistrates would always send timely notice in case they may be unable to attend. Mr. Pearson at the same time records his thanks to twenty-four Magistrates who have attended to complete a Bench at a moment's notice. Sir Charles Elliott highly appreciates the valuable assistance rendered to Government by these gentlemen at the sacrifice of personal considerations; and they should be an example to others, few in number, who have not attended in spite of invitation. The number of Honorary Magistrates who attended one or more sittings of the Bench was 88, and the average number of sittings of these Magistrates was 13, as compared with 11.6 in the preceding year.

24. The Lieutenant-Governor notices with satisfaction the favourable mention made by Sir John Lambert of the assistance rendered in the administration of the force by Mr. A. B. Barnard, Deputy Commissioner of Police, and of the other officers specially named in paragraph 37 of the report. Sir John Lambert himself continued to discharge his duties with his usual ability and efficiency. The thanks of Government are also due to Mr. Pearson, and to Nawab Syud Ameer Hossein, C.I.E., and the Hon'ble Maulvi Abdul Jabbar for the good work they have done during the year. The names of the subordinate officers favourably mentioned will be duly noted.

ORDER.—Ordered that copies of this Resolution be forwarded to the Commissioner of Police, Calcutta, for information and for communication to the Presidency Magistrates; and to the Commissioner of the Presidency Division, the Chairman of the Corporation of Calcutta, and the Municipal Department of this Government, for information.

Ordered also, that a copy of the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

*Chief Secy. to the Govt. of Bengal.*

# WORKS OF PUBLIC UTILITY CONSTRUCTED DURING THE YEAR 1894 FROM PRIVATE CONTRIBUTIONS.

No. 3089M.P.I.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Mis. Pub. Impts.

Dated Calcutta, the 11th June 1895.

## RESOLUTION.

READ—

Statement of works of public utility constructed by private individuals in the several districts in Bengal during the year 1894, and statement of similar works constructed during the year 1893 and the Resolution thereon.

REMARKS.—The following is a distribution of works of public utility which were constructed during the year 1894 at a cost of Rs. 3,46,424-3:—

		Number of works.	Cost.					
			Rs.	A.	P.	Rs.	A.	P.
I.—Works costing Rs. 500 each and upwards.	Public buildings	7	10,630	0	0			
	Roads	4	2,850	0	0			
	Bridges	6	12,716	0	0			
	Ghats	3	6,587	0	0			
	Tanks	175	1,96,627	8	0			
	Wells	7	4,266	11	0			
	Irrigation channels	1	1,500	0	0			
	Jungle clearing	1	500	0	0			
						2,35,677	3	0
II.—Works costing less than Rs. 500 each			1,10,747	0	0	1,10,747	0	0
Total			204			3,46,424	3	0

2. The following statement shows the amounts contributed during the year under review for the two classes of works, as compared with those of the two preceding years, with the result that the operations of 1894 show less outlay than those of 1893 by Rs. 49,196, and less than those of 1892 by Rs. 94,982:—

CLASS OF WORK.	1894.	1893.	1892.
1	2	3	4
I.—Works costing less than Rs. 500 each.	Rs. 1,10,747 A. 0 P. 0	Rs. 1,09,158 A. 6 P. 0	Rs. 1,27,242 A. 5 P. 6
II.—Works costing Rs. 500 each and upwards.	2,35,677 3 0	2,86,462 0 0	3,14,164 12 3
Total	3,46,424 3 0	3,95,620 6 0	4,41,407 1 9

3. The following works deserve special notice:—

*Public Buildings.*—The contributions under this head amount to Rs. 10,630, and show a considerable decrease, as compared with the figures of the previous year. Of this sum, Rs. 3,070 were raised by general subscription through Shadullah Bepari and Ashraf Ali for a mosque near the Brahmanbaria Police Station, Tippera district; Batal Pramanik of Haripur gave Rs. 1,800 for a mosque at Haripur, Rangpur district; Dengu Mandal Rs. 1,500 for a mosque at Ujan Chandrapara, Mymensingh district; Chammon Kalal, Rs. 1,400 for a mosque at Gadar, Hazaribagh district; Maharaja Girija Nath Rai Bahadur of Dinajpur, Rs. 1,200 for a hospital building at Raiganj; Raja Sites Chandra Pande, Rs. 860 for an addition to the Boarding House for students at Pakour, Sonthal Parganas district; Babu Govinda Chandra Chatterjee of Hooghly, Rs. 800 for a Charitable Dispensary at Bhandarhati.

**Roads.**—A total sum of Rs. 2,850 was contributed for roads by the following gentlemen:—

His Highness the Maharaja of Kuch Bihar, Rs. 1,150 for maintaining portions of the road to Haldibari in Patgram and of the Morangahat road; Madan Mohan Shaha, Rs. 1,000 for a road from Ganipur to Chaumuhanihat, Noakhali district; Karuna Kanta Shaha, Rs. 700 for a road between Kagoil and Pirgacha, Bogra district.

**Bridges.**—On this class of work Rs. 12,716 were expended thus:—

His Highness the Maharaja of Kuch Bihar Rs. 6,500 for an iron bridge at Patgram, Jalpaiguri district; Gadadhar Pramanik, Rs. 2,500 for a wooden bridge over the Dhanlai river, Rangpur district; Babu Srikanta Prasad Rs. 1,300 for a culvert at Baniapur, Saran district; Babu Dharam Chand Lal, Rs. 816 for repairs to the Purnea city bridge; Mr. A. W. N. Watt, Rs. 800 for a bridge at Tippera, Champaran district; Hari Prasad Sarkar, Rs. 800 for a pukka bridge at Nasaratpur, Dinajpur district.

**Ghats.**—The contributions for ghats stand at Rs. 6,587, of which the following are details:—

Babu Chintamani De gave Rs. 3,500 for a pukka ghat on the Hooghly river at Ramkrishnapur, Howrah district; Srimati Mahakum Kumari gave Rs. 2,387 for a bathing ghat at Deoghur town, Sonthal Parganas district; Babu Jivan Chandra Darbesh of Meherpur gave Rs. 700 for masonry steps at the bathing ghat on the river Bhairub, at Meherpur, Nadia district.

**Tanks.**—The total expenditure on tanks was Rs. 1,96,027-8, of which the following are the principal donations:—

Rani Hemanta Kumari Debi, Rajshahi district, Rs. 14,210; Birj Mohun Lal, Monghyr district, Rs. 10,000; Taki Pramanik, Rajshahi district, Rs. 8,000; Babu Bodh Sahu, Champaran district, Rs. 6,000; Babus Narahari Dalal and Mukunda Dalal, Birbhum district, Rs. 3,000; Babu Uma Charan Ghose, Faridpur district, Rs. 3,000; Babu Babu Jan Jha, Darbhanga district, Rs. 3,000; Babu Shama Charan Mukerjee, Nadia district, Rs. 2,600; Babu Mahabir Prasad, Muzaffarpur district, Rs. 2,000; Babus Kuraram Acharya and Krishnadhan Naik, Burdwan district, Rs. 2,000 each; Babu Satis Chandra Sikdar, Faridpur district, Rs. 2,000.

**Wells.**—Seven wells were sunk at a cost of Rs. 4,266-11. Nowrang Lal Dass Chaudhuri gave Rs. 1,166-11 for a pukka well at Matigara Hat, Darjeeling district; Rs. 1,100 were contributed for two pukka wells in the Monghyr district; Rs. 1,000 for two ring wells in the Mymensingh district; Rs. 1,000 for two pukka wells in the Bhagalpur district.

**Irrigation Channels.**—Naba Kumar Bagis gave Rs. 1,500 for a khal in the Khulna district.

**Jungle clearing.**—Rupees 500 were contributed for jungle clearing at Bikrampur, Nadia district.

**RESOLUTION.**—The total amount contributed for works of public utility during the year 1894 shows a marked falling off as compared with the operations of the two previous years; the Lieutenant-Governor much regrets that this diminution should have occurred and trusts that this downward tendency will not continue. To those who have displayed their liberality and public spirit, His Honour desires that the thanks of the Government may be conveyed.

Formal letters of acknowledgment will be forwarded by the Government to those who have constructed works costing Rs. 500 each and upwards. The usual acknowledgment will be conveyed to the others by the Commissioner or the Magistrate of the Division.

**ORDER.**—Ordered that a copy of this Resolution and of the statement be forwarded to the Board of Revenue, Lower Provinces, and to all Commissioners of Divisions; to the Commissioner of Chota Nagpur; to all Superintending Engineers of Public Works Circles in Bengal; and to the Inspectors of Works, Eastern and Central Circles and Bihar Division, for information.

Ordered also that a copy of this Resolution and of the statement be forwarded to the Revenue and Judicial Departments of this Government for information.

Ordered also that this Resolution and the statement be published in the Supplement to the *Calcutta Gazette* for general information.

By order of the Lieutenant-Governor of Bengal,

F. J. JOHNSTONE,

Secy. to the Govt. of Bengal,

P. W. Dept.

**FEEDER ROADS TO THE EASTERN BENGAL STATE RAILWAY  
SYSTEM.**

No. 3090C.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Communications.

*Dated Darjeeling, the 11th June 1895.***RESOLUTION.****READ—**

Government of India, Public Works Department Resolution No. 94A.G., dated the 4th June 1894, paragraph 5, in which the Government of India express a hope that works of communication, particularly feeder roads to Railways, will have the first claim on assignments for expenditure on Public Works.

The accompanying lists of proposed feeder roads to the Eastern Bengal State Railway, and Bengal Central Railway, have been prepared with the joint assistance of the Manager of the Eastern Bengal State Railway and the Commissioners of the Presidency and Rajshahi Divisions, and of the Agent and Chief Engineer of the Bengal Central Railway. The Feeder Roads have been arranged in their order of importance, so far as that can be ascertained. The Lieutenant-Governor has now resolved to depute a Public Works Department officer with a suitable staff to survey the proposed roads and prepare estimates of their cost, and when this has been done the resulting information will be made public, and grants will be made from Provincial Revenues, as far as possible, which it is hoped the District Boards may be able to supplement, for the construction of the roads. The object of publishing this information is to make it known to the public what roads are considered by those best acquainted with local conditions to be valuable as feeders, in the event of any one being inclined to undertake the construction of feeder railways along the lines indicated, and to propose terms for their construction which may be acceptable to the Supreme Government under the rules for the construction of feeder lines.

**ORDER.**—Ordered that a copy of this Resolution be forwarded to the Commissioners, Presidency and Rajshahi Divisions; to the Manager, Eastern Bengal State Railway, and to the Agent and Chief Engineer, Bengal Central Railway, for information.

Ordered also that this Resolution be published in the supplement to the *Calcutta Gazette* for general information.

By order of the Lieutenant-Governor of Bengal,

F. J. JOHNSTONE, MEM. INST. C. ENGRS.,

*Secretary to the Government of Bengal.*

**A.—List of Feeder Roads to the Eastern section of the Eastern Bengal State Railway proposed by the Commissioner of the Presidency Division in communication with the Manager.**

(Vide Commissioner's No. G.—84R. of 26th October 1894.)

## WEATHER AND CROP REPORT.

For the week ending the 10th June, 1895.

**Burdwan.**—Rainfall at Burdwan 1·73. Weather stormy and cool. rice nearly finished. Lands are being ploughed for *aman* rice. Common rice sells from 10 to 21 seers a rupee.

**Midnapore.**—Rainfall at Sadar 1·50. Weather hot and cloudy. Fair rain throughout the district. More rain still wanted. Ploughing and sowing going on. Indigo, sugarcane and *til* promising. Tobacco and *jara* doing badly. Common rice sells from 16 to 21 seers per rupee. Want of good drinking water felt throughout Contai.

**24-Parganas.**—Rainfall at Sadar 2·66. Weather seasonable. Prospects of *aus*, jute and sugarcane improved by rain. Ploughing going on for further sowing of *aman* and jute, but more rain is required. Condition of cattle good. Fodder and water sufficient. Rice sells at—

	Srs.	
Sadar	...	13
Barasat	...	15
Diamond Harbour	...	15
		} per rupee. =

**Murshidabad.**—Rainfall 2·27. Weather hot. Harvesting of *boro* paddy finished. Sowing of winter rice continues. Prospects of standing crops good. Fodder available. Price of common rice 16 seers per rupee.

**Khulna.**—Rainfall at Khulna 1·31, Bagerhat 1·18, Satkhira 1·51. Weather hot. Sowing of *aus* and jute almost completed. *Aus* and jute seedlings doing well. Cultivation of *aman* continues. Price of common rice 17 to 23 seers per rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall 1·33. Weather hot and cloudy. Standing crops good. Price of common rice 15 to 16 seers a rupee. No cattle-disease, nor any complaint for fodder or drinking water.

**Rangput.**—Average rainfall 3·64. Weather seasonable. Prospects of standing crops good. Cultivation for *aman* has commenced. Price of common rice 10 to 15 seers a rupee. Fodder available.

**Pabna.**—Rainfall 1·23. Weather hot. Crops doing well. Common rice selling at 16 seers per rupee at Pabna and 14 seers at Sirajganj, where jute sells at Rs. 4-14 to Rs. 5-11 per maund. Fodder and water sufficient.

**Dacca.**—Rainfall 2·88. Monsoon weather. Prospects of crops good. *Aus* is being harvested. Price of common rice 19 seers per rupee. No cattle-disease. Fodder plentiful.

**Chittagong.**—Rainfall 1·74. Weather seasonable. Cultivation for *aus* still continues. Prices stationary. Fodder and water sufficient. Condition of cattle good.

**Patna.**—Rain wanted for *bhadoi* sowings. Sowing of *marua* and broadcast paddy has commenced in places. Common rice selling from 16½ to 18 seers per rupee.

**Gaya.**—Rainfall at Sadar 1·74. Sugarcane doing well. *Marua* is being sown. Prices about normal. Fodder and water sufficient.

**Champaran.**—Rainfall at Motihari 1·16. Slight rainfall last night (9th June). Common rice selling at 16 seers a rupee. Fodder and water for cattle sufficient.

**Darbhanga.**—Weather hot and cloudy. Rain wanted for *bhadoi* crops. Fodder sufficient for cattle. Prices stationary.

**Bhagalpur.**—Weather hot and cloudy. *Marua*, broadcast paddy, indigo and sugarcane doing well. Rain urgently wanted for *bhadoi* crops. Common rice sells at 18 seers 4 chitaks per rupee. Water and fodder sufficient.

**Purnea.**—Rainfall 1·76. *Bhadoi* rice, jute and indigo doing well. Transplantation of *aghani* rice going on. Fodder and water sufficient. No cattle-disease. Common rice selling from 16 to 22 seers a rupee.

**Cuttack.**—Rainfall 1·12. Weather hot and cloudy. Sowing of *beali* and *sarad* rice continues. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 12 chitaks to 25 seers per rupee.

**Hazaribagh.**—Weather hot. Ploughing and sowing in progress. Sugarcane doing well. Mango very poor. Fodder and water deficient in places. Price of common rice at head-quarters 14 to 16 seers and at Giridi 10 to 15 seers per rupee.

**General Summary.**—There was rain in all the reporting districts of Bengal Proper and in Cuttack; in Bihar there were local showers only. The sowing of *aus* rice and jute is almost over, and both crops so far are doing well. The preparation of the land for *aman* rice has commenced. In Bihar rain is generally required for the sowing of the *bhadoi* crops. Sugarcane, indigo and other standing crops are in good condition. No cattle-disease is reported. The price of common rice is stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,

*The 11th June, 1895.*

C. E. BUCKLAND,

*Secretary to the Govt. of Bengal.*

**STATISTICAL DEPARTMENT,**  
*The 10th June, 1895.*

C. E. BUCKLAND,  
Secy. to the Govt. of Bengal.

**Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of May 1895.**

	Inches.	Date.	Hour.
The mean pressure of the month ... ..	29.642		
The average pressure of May from 24 years' registers ...	29.656		
The highest pressure in the month ... ..	29.917	4th	10
The lowest pressure in the month ... ..	29.875	19th	16
The range of pressure ... ..	0.542		
The total number of hours of bright sunshine during the month	263.0		
The maximum possible number of hours of sunshine ...	408.3		
°			
The mean temperature of the month ... ..	87.5		
The average temperature of May from 24 years' registers ...	86.1		
The highest temperature in the month ... ..	107.2	20th	
The lowest temperature in the month ... ..	70.2	4th	
The range of temperature during the month ... ..	37.0		
The mean daily range of temperature ... ..	17.0		
The greatest range of temperature in one day ... ..	24.4	20th	
Per cent.			
The mean humidity of the month ... ..	74		
The average humidity of May from 24 years' registers ...	73		
Inches.			
The mean vapour tension of the month ... ..	0.957		
The average vapour tension of May from 9 years' registers ...	0.933		
The mean cloud proportion of the month ... ..	4.06		
The average cloud proportion of May from 18 years' registers ...	4.52		
Inches.			
The total rainfall of the month ... ..	2.41		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	2.31		
The average fall of May from 48 years' registers ... ..	5.40		
The greatest fall in 24 hours ... ..	0.93	4th	
Days.			
The number of rainy days in the month ... ..	7		
The average number of rainy days in May from 24 years' registers ...	13		
°			
The mean maximum equilibrium temperature of solar radiation during the month ... ..	152.6		
The mean difference of sun and air temperatures ... ..	56.4		
The greatest sun temperature ... ..	159.2	20th	
The greatest excess of sun over air temperature ... ..	62.4	13th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth ... ..	76.1		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground ... ..	3.2		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature ... ..	4.9	10th	
Miles.			
The mean movement of the wind per day ... ..	149.3		
The greatest movement of the wind in one day ... ..	313.0	26th	
The greatest movement of the wind in one hour ... ..	23.0	26th, 9 to 10 A.M.	
The number of hours with winds from each of the 8 points—			
N. 3, N.E. 11, E. 41, S.E. 172, S. 312, S.W. 163, W. 20, N.W. 7, Calm 15.			

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.5 higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

METEOROLOGICAL OFFICE, INDIA;  
Calcutta, the 10th June 1895.

\* Mean for 6 days.

Mean station.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the station. The humidity of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean at the numerical means of average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question.

for the week ending Saturday, the 8th of June 1895.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M.; SATURDAY,  
• THE 8TH OF JUNE 1895.**

There has been little of importance to record during the past week, as regards atmospheric changes, as comparatively calm settled weather has prevailed over the Bay and, with the exception of local thunder-storms, in Bengal also. Pressure was above the normal at the beginning of the week, and by slow upward changes the excess became more pronounced over Bengal than over the Bay, so that a much more uniform arrangement was established than usually obtains in the early part of June. This high pressure in the north led to changes in Bengal which began in the east and extended westwards. The southerly winds in Lower Bengal became easterly, and, as generally occurs when this change takes place, local disturbances caused rain to fall over a great part of the province.

The rainfall was confined to East and North Bengal at the beginning of the week, and temperature was above the normal at all except a few stations, chiefly in Assam and North Bengal. The excess in temperature increased towards the west of the province, where there was still a difference from the normal of more than 5°. The local storms were very numerous in the eastern half of the province on Monday, the 3rd, and a considerable fall of temperature followed the rain, and, as at the end of last week, excessive temperatures were confined to Orissa, Chota Nagpur, and Bihar. During the past few weeks when temperature, fell in the east of the province, the change has never extended over the western districts, but on this occasion, probably because of the continued high pressure over the northern districts and the steady easterly winds in the south of the province, the local storms continued for some days and gradually extended westwards. On the 4th temperature was still relatively low in the east and above the normal in the west, especially in Chota Nagpur and the west of Bihar. On the 5th defect had increased, and the excessive temperatures were confined to Chota Nagpur and Orissa. On the 6th there was defect over the whole province, the greatest being in the west of Bihar.

While this series of thunder-storms was passing westwards over the western half of the province, weather conditions were becoming more settled in the east. Rainfall had almost entirely ceased in Assam and East and North Bengal on the 6th, and temperature, with the clearing skies, was rising. This change also extended westward. On the 6th light showers were fairly general in the western districts, but on the 7th rainfall was more scattered, and chiefly in Orissa, Chota Nagpur, and the west of South-West Bengal, and on the 8th there was very little rain anywhere. The rising temperature followed the clearing skies, and mean temperature at the end of the week was again above the normal in all districts except Orissa, Chota Nagpur, and South-West Bengal, where there was defect of about 2°.

*Pressure.*—Changes have been of little importance throughout the week. A uniform distribution has prevailed over the Bay owing to a rather large excess over Bengal, and of diminishing amount towards the south. This arrangement has had a very apparent influence on the weather because of the steadiness with which it has remained from day to day. Mean pressure is above the normal in all districts, by amounts varying from .08 inch in Orissa to .12 inch in the north of the province.

*Temperature* was high over the whole province at the beginning of the week. The local storms which began in the east of the province caused a fall of temperature which gradually spread over all districts. Towards the end of the week temperature was recovering, and averages on the last day of the week were below the normal only in the south-western districts. The means for the week do not differ much from the normal, being nearly 2° above in Chota Nagpur, half a degree above in Orissa and Bihar, almost normal in East Bengal, and 1° below in the other districts.

*Rainfall.*—Very little rain fell on the first day of the week. The numerous thunder-storms during the following four days caused fairly general rainfall over a great part of the province. The last two days were almost rainless except in the south-western districts, where showers were still falling. The averages are all below the normal for the larger subdivisions, by more than 1 inch in East and North Bengal and by about a quarter of an inch in the other districts. East Bengal received 2.51 inches, North Bengal 2.16 inches, South-West Bengal 1.78 inches, Orissa 1 inch, Chota Nagpur .7 inch, and Bihar about half an inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 8th of June 1895 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1895.

The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office ... .. 77

The total fall of rain from 2nd to 8th June 1895 ... .. Inches. 2.74

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. 1.79

The total fall from 1st January to 8th June 1895 ... .. 8.09

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. 11.55

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; t, thunder; d, drizzling rain; w, strong wind; p, passing temporary showers; K, thunderstorm; <, lightning; a, dew; gloomy.

### RESOLUTION REVIEWING THE REPORT ON THE WORKING OF THE CALCUTTA MEDICAL INSTITUTIONS FOR THE YEAR 1894.

MUNICIPAL DEPARTMENT—MEDICAL.

RESOLUTION—No. 167 T.—M.

*Dated Darjeeling, the 14th June 1895.*

READ—

The Report on the Calcutta Medical Institutions for the year 1894.

Read also—

The Report for the year 1893, and the Resolution recorded upon it.

According to the statistics of mortality during 1894, given in the report, the Calcutta death-rate of 30 per thousand was the highest recorded during the last ten years, and that of Howrah, 25.95, the highest for the last nine years, while in the Suburban area, which was amalgamated with Calcutta in 1888, the death-rate rose to 39, or 1.9 higher than in 1893. In all three areas the mortality from the chief diseases shows an increase. The deaths from cholera were nearly doubled; the mortality from bowel-complaints increased 11.83 per cent., deaths from fever 11.53 per cent., and from small-pox 966.66 per cent. The increase in the number of deaths from small-pox was very marked, being 416, against 39 in 1893. The disease spread rapidly since the close of the year under review, and it is doubtful whether it can as yet be said to show signs of abating. Putting aside small-pox, the initial causation of which is obscure, and cholera, which is usually more prevalent in dry years, it seems at first sight surprising that fevers and bowel-complaints, the characteristic diseases

of a damp season, should show so marked an increase in a year of deficient rainfall. This can hardly be due to greater accuracy in registration, for there is no reason to suppose that the record of deaths in the metropolitan area is defective to anything like the extent of the increased mortality reported as due to these two causes. The reason doubtless is, as is explained at greater length below, that diseases do not come in and go out with the year, and that a large proportion of the deaths registered in the early part of 1894 were due to causes which began to operate in 1893.

2. The following table gives the number of indoor and outdoor patients treated in the several hospitals of Calcutta and Howrah during the past two years:—

NAME OF INSTITUTION.	1893.									1894.								
	INDOOR.			OUTDOOR.			Total number of patients, both indoor and outdoor.	Total number of deaths among indoor patients.	Percentage of deaths on total number of indoor patients treated.	INDOOR. Total	24,336	1,203.20	1,580	241,721	1,736.31	266,037	2,800	12.11		24,318	1,222.83	1,603	252,928	1,785.93		278,246	3,073	11.40
Howrah General Hospital	1,722	73.18	108	10,338	90.59	12,060	307	23.05		1,504	68.53	108	11,113	86.44		12,707	359	22.63
GRAND TOTAL	26,058	1,336.38	1,687	252,059	1,825.92	278,117	3,107	12.88		24,912	1,281.36	1,711	264,041	1,871.37		288,953	3,432	14.08

3. The number of outdoor patients rose from 252,059 to 264,041. Out of this increase of 11,982, the Medical College Hospital accounts for 3,815, probably due to improved accommodation having been provided for out-patients; and the Campbell Hospital for 2,610, which shows that the out-patient department, started in 1892, has met a real want in that part of the town. The large increase of 2,828 at the Park Street Dispensary is not explained in the report. The Dufferin Victoria Hospital, the statistics of which were included for the first time in last year's report, shows an increase of out-patient from 8,758 to 9,035, which denotes satisfactory progress. The outdoor department recently opened at the Presidency General Hospital had an attendance of 303, which is less than might have been expected, considering that persons living in Bhawanipur, Hastings and Alipore have hitherto been obliged to seek treatment at the Medical College Hospital. But the number may have been kept down by the operation of the rule restricting gratuitous advice and medicine, in the case of European and Eurasian patients, to persons whose circumstances render them unable to pay. This attempt to check the abuse of the out-patient system by well-to-do persons is said to have worked well in the Presidency General and the Campbell Hospitals, while it had no practical effect at the Mayo Hospital, where very few European and Eurasian patients are treated. In the Medical College Hospital a difficulty was felt in applying the rule, owing to the reluctance of the medical officers to question sick people about their incomes.

4. The total number of indoor patients admitted into the hospitals fell from 26,058 to 24,912, the daily average attendance also declining from 1,338.38 to 1,281.36. The falling off was insignificant everywhere except in the Campbell Hospital, where the number dropped from 9,384 to 8,440—a fall for which no convincing reasons are assigned. The Lieutenant-Governor is glad to observe that at the Dufferin Victoria Hospital the number of patients rose

from 155 to 304, which shows that substantial progress has been made in combating the current prejudices on the subject of the treatment of the diseases of women.

5. Of the total number of patients, both indoor and outdoor, treated in all the hospitals during the year, 171,084 were men, 45,714 women, and 72,155 children. The corresponding figures for the previous year were 167,092, 45,290 and 65,735. During the year, therefore, there was an increase of 10,836 patients. Of the total number treated, 48.67 per cent. were Hindus, 33.11 Muhammadans, 11.05 Eurasians, and 3.12 Europeans. The number of Muhammadans treated shows an increase of 5,090, and that of Europeans of 666.

6. The general death-rate of all the institutions, excluding the cases treated in the Eye Infirmary, rose from 12.8 to 14 per cent. of the persons treated. As was explained in the Resolution on last year's report, the circumstances of the different hospitals differ so widely that no trustworthy conclusions can be drawn from a comparison of their aggregate rates of mortality. Taking the rates for different classes of patients, the returns show that the mortality among adult males varied from 1.04 at the Police Hospital, where the patients are mostly in the prime of life, to 22.13 at Sealdah, which receives a large proportion of moribund cases; among women from 1.46 at the Dufferin Victoria Hospital, which treats special diseases, to 34.80 at Howrah, where the conditions resemble those prevalent at Sealdah. The death-rate for female children at Sealdah rose from 21.59 to 26.89; while at the Dufferin Hospital no deaths occurred among the thirty-one girls who were treated.

7. The number of deaths from small-pox in Calcutta, Howrah and the Suburban area rose from 39 to 416, and the number of patients admitted into hospital from 49 to 177, of whom 70 died. Of the patients treated in 1894, 121 were unprotected, and of these 56, or 46.28 per cent., died. One of these 56 had had small-pox before, and one person who had been inoculated, died in spite of the protection thus afforded. Fifty were said to have been vaccinated, among whom 13 cases, or 26 per cent., proved fatal. It is stated, however, that typical vaccination scars were found in only one case, so that it seems doubtful whether these 13 persons had been effectively vaccinated.

These statistics deal only with the initial stages of the outbreak which has unhappily lasted on into the current year. The monthly mortality up to the end of May 1895 in Calcutta is shown in the following statement side by side with the corresponding figures for the previous year:—

			1895.	1894.
January	...	...	114	4
February	...	...	268	20
March	...	...	844	44
April	...	...	511	96
May	...	...	357	82

So far as these figures go, they seem to afford ground for the surmise that the epidemic reached its climax in the high mortality of March 1895, and is now tending to abate. The weekly mortality shows a progressive decline from 233, the number of deaths recorded in the week ending 23rd March, to 34, the number registered in the last week of May. The history of small-pox epidemics in India generally is that the death-rate begins as a rule to decline in April and May, owing to the dry heat of these months being adverse to the spread of the disease, and presenting conditions more favourable to the recovery of those already suffering. This rule was found to hold good for a series of epidemics in Calcutta, except only those of 1832 and 1878; and in more recent years it is fully borne out by the statistics of the epidemic of 1890, and in a less degree by those of 1894. The causes, however, which produce an epidemic of small-pox are so obscure, and the spread of the disease depends so much upon the action of individuals, that all attempts to formulate general conclusions or to forecast the course of events in any particular outbreak must be for the most part conjectural. Sir Charles Elliott can only hope that the present epidemic is now beginning to abate, and that the lessons it has taught will not be lost upon the Corporation of Calcutta, who are bound by law to make adequate and suitable provision for preventing or checking the spread of dangerous diseases, and to enforce the compulsory provisions of the Vaccination Act.

8. The number of admissions to hospitals of persons suffering from cholera was 567 against 431, 709 and 761 in the three previous years; and 323 cases proved fatal, giving a death-rate of 56·9 per cent. The rate of mortality among Europeans and Eurasians was 72·72 (16 deaths out of 22 cases), as compared with 57·14 in the previous year, and among other classes 56·33 against 55·85.

Fourteen cases of cholera originated in the Campbell Hospital, of which nine proved fatal, and at the Howrah General Hospital a European sailor took the disease a week after admission, and died of it. In neither case could the cause of the outbreak be traced, though it is suggested that the insufficiency of the supply of filtered water at Sealdah may have led to the use of polluted tank water. In connexion with these cases, Dr. Ross refers to the result of Dr. Haffkine's inoculation against cholera in the Gaya Jail as tending to show that the operation affords at least temporary immunity.

9. The number of cases of dysentery and diarrhoea admitted into hospital exceeded the large figures of 1893, although the death-rate was slightly lower, 30·17 for dysentery and 35·86 for diarrhoea, against 30·53 and 39·58, respectively, in the preceding year. Conversely in the case of malarial fevers the admissions fell from 4,629 to 4,059, while the death-rate increased from 7·88 to 12·21 per cent. The Inspector-General remarks that it is at first sight surprising that the death-rate from fever and bowel-complaints should have risen in 1894, when the rainfall was less and the climatic conditions more normal than in 1893, and goes on to point out that the increased mortality from these causes fell entirely on the early part of the year, and was really a legacy from the prolonged rains of 1893. In other words, disease runs its course, and causes produce their results without reference to the arbitrary periods dealt with in official reports. This view is corroborated by a comparison of the mortality from these causes in Calcutta during the first four months of 1893 and 1894, as reported by the Sanitary Commissioner. In the first four months of 1894, the deaths from bowel-complaints numbered 1,077 as against 707 in the first four months of 1893; while the deaths from fever during the same period of 1894 were 3,106 as against 2,075 in 1893. The total number of persons treated for venereal complaints diminished by 1,064, and the two worst forms of the disease show a slight decline. Thirty-four lepers were admitted in the hospitals during the year, against 32 in the previous year. The hope expressed by the Lieutenant-Governor in paragraph 9 of the Resolution on the report for the year 1893, that all leprosy cases in Calcutta will be accommodated in the Leper Asylum, will be realised as soon as the Bill recently passed by the Bengal Council receives the assent of the Viceroy. Out of the 20 cases of enteric fever reported, 17 of the patients were Europeans, of whom six died. The admissions from remittent fever show a little diminution, the figures being 918 against 1,184, but the percentage of deaths was higher than in the previous year.

10. The total number of major operations increased from 3,339 to 3,643, and the minor operations from 19,001 to 24,988. Out of the increase (304) in major operations, 125 is accounted for by the opening of a special department at the Medical College for the treatment of diseases of the throat, ear and nose. Death ensued in 129 cases, giving a percentage of 3·4, against 3·15 in the previous year. The largest number of operations was performed at the Medical College Hospital, where the death-rate was 3·44 against 4·05. The figures for the Campbell Hospital show a reduction of 33 cases. A separate surgical ward has been opened since the close of the year, and this hospital, which is also the chief vernacular medical school in Bengal, will now carry on its surgical work under more favourable conditions. At the Dufferin Victoria Hospital, 30 major operations were performed, against 12 in 1893, out of which one terminated fatally.

11. In the Eden Hospital, 1,462 women and children were treated, against 1,367 in 1893. Of these, 718 were Europeans, 600 Hindus and Muhammadans, and 144 belonged to other classes. The death-rate among Europeans fell from 8·40 to 5·48 per cent., the rate among Hindus and Muhammadans increased from 8·42 to 10·59, while the percentage among other classes fell from 12·02 to 6·80. The number of confinement cases rose from 573 to 618, of which 23 terminated

fatally. The number of cases of septicæmia fell from 31 to 23, but unhappily 14 of these originated within the hospital. The special ward for the treatment of these cases has now been completed, and it is hoped that this will bring about better results. In this hospital, 392 major operations were performed with 26 deaths, against 337 with 31 deaths in 1893. The outdoor department is conducted on alternate days by the Resident Surgeon and by Mrs. Kadambini Ganguli, a former student of the Calcutta Medical College, who volunteered to take charge of the ward. The female students of the Campbell Hospital receive practical training under her direction. The number of patients rose from 3,535 to 3,990, and the ward seems to be gaining in popularity.

12. The increase in the number of indoor patients treated during the year in the Shama Charan Law Eyo Infirmary was nominal, while the number of outdoor patients rose from 11,079 to 11,944. As usual, most of the operations were cases of extraction of the lens. Vision was restored in 75·07 per cent., and 8·30 per cent. were relieved.

13. In the Ezra Hospital, where for the most part patients of the Jewish persuasion are treated, 287 in-patients were admitted, of whom 7 died. The number of outdoor patients was less by 264 than in the previous year. Of the total expenditure, Rs. 6,600·14, for the maintenance of the hospital, Rs. 5,724·14, or 86·72 per cent., was borne by Government.

14. The Lieutenant-Governor observes with pleasure that the work done by trained nurses at the Medical College and the General and Eden Hospitals, assisted at the latter institution by pupil nurses and dhais, is well spoken of by the medical officers concerned. Certain District Boards are reported to have sent two pupil midwives to receive their training in the Eden Hospital, and the Lieutenant-Governor hopes that their example will be followed by others. Eighteen pupil nurses and fourteen dhais passed out of the Eden Hospital during the year. The nursing arrangements at the Campbell Hospital are now under consideration with reference to certain proposals made by the Committee appointed to report on the training and position of Civil Hospital Assistants.

15. The invested capital of the hospitals in Calcutta and Howrah increased from Rs. 5,87,000 to Rs. 5,93,300, the increase being at the Medical College and the Howrah General Hospitals. The following statement compares the main heads of receipts and expenditure of all these institutions for the last two years:—

		INCOME.	
		1893.	1894.
		Rs.	Rs.
Opening balance	...	19,086	29,519
From Government	...	2,96,478	3,24,585
Local Funds	...	68,717	68,536
Municipal Funds	...	36,054	40,557
Interest on investments	...	26,719	25,979
Receipts from paying patients	...	48,713	46,668
Miscellaneous receipts	...	2,198	3,222
Subscriptions	{ Europeans	8,779	8,914
	{ Natives	3,706	4,270
		1,94,886	1,98,176
Total	...	5,10,450	5,52,280
		EXPENDITURE.	
On establishment	...	2,02,427	2,02,595
„ bazar medicine	...	5,339	5,535
„ European medicine	...	32,688	32,685
„ diet	...	1,30,829	1,27,840
„ miscellaneous charges	...	76,680	85,522
„ buildings and repairs	...	28,939	58,778
Invested during the year	...	4,029	6,300
		4,80,931	5,19,255
Closing balance	...	29,519	33,025
Total	...	5,10,450	5,52,280

16. The total income, excluding the opening balance, amounted to Rs. 5,22,761, which exceeds that of the previous year by Rs. 31,397. The cost to Government shows an increase of Rs. 28,107, owing to the heavy charge on account of buildings and repairs, which rose from Rs. 28,939 in 1893 to Rs. 58,778 in 1894. There was a falling off of Rs. 2,045 in the receipts from paying patients, while the municipal contributions increased by Rs. 4,503 owing to the additional grant of Rs. 5,000 to the Campbell Hospital made by the Calcutta Municipality. Miscellaneous receipts and subscriptions show a small increase. The total expenditure came to Rs. 5,19,255, against Rs. 4,80,931 in 1893. The cost of building and repairs rose from Rs. 28,939 to Rs. 58,778 owing to quadrennial repairs at the Medical College, the construction of a new surgical ward at the Campbell Hospital, important extensions at Howrah, and a contagious ward at the Police Hospital. There was also an increase under miscellaneous charges.

17. The Lieutenant-Governor desires to thank the Inspector General of Civil Hospitals for the painstaking attempt which has been made in paragraphs 52 to 58 of the report to work out a statistical comparison of the incidence of cost per patient in the different hospitals under the main heads of expenditure. Owing to the difficulty of arriving at a standard which will fit the varying conditions of all the institutions, all such attempts must necessarily be to some extent approximate, and there are still hypothetical elements in the comparison which hinder a discussion of the calculations in detail. The Lieutenant-Governor trusts that when made use of with the corrections and deductions which the Inspector-General's experience will enable him to apply, the results worked out will lead to economy and greater uniformity of expenditure. Subject to these remarks, His Honour agrees with the Inspector-General in thinking that there is probably room for economy under the heads of compounders and dressers at the Mayo Institutions and the Howrah General Hospital; of country and European medicines at the Presidency General Hospital; of menial servants at the Sukea's Street Dispensary; and of other servants at the Howrah Hospital. The average cost of diet at the Mayo Hospital, which was noticed in last year's Resolution, has been reduced to three annas, and it is explained that no further reduction is possible, as an extra morning meal has been introduced.

18. The Inspector-General's suggestion (paragraph 57) that the Medical Officers of the Presidency Institutions should be permitted to purchase their drugs and instruments from England, seems a practical one, and should be separately submitted for orders. This method has been recently adopted for the supplies required by all dispensaries and hospitals outside Calcutta, and is expected to result in a considerable saving.

19. The new hospital for south Calcutta, which was noticed in paragraph 20 of the Resolution on the report for 1893, could not be commenced during 1894, but plans and estimates amounting to Rs. 90,539 for the buildings have since been sanctioned, and the work will be undertaken as soon as funds are available.

20. Surgeon-Colonel R. Harvey was Inspector-General of Civil Hospitals throughout the year, and the Lieutenant-Governor takes this opportunity of acknowledging his efficient supervision of the hospitals under his control, and of regretting the breakdown of his health. Sir Charles Elliott's thanks are due to Surgeon-Colonel G. C. Ross, who took charge on the 23rd March, for a clear report which was submitted within a fortnight of the date on which it was due.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

*Secretary to the Govt. of Bengal.*

**RESOLUTION ON THE ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN, CALCUTTA, FOR THE YEAR 1894-95.**

FINANCIAL DEPARTMENT—MISCELLANEOUS.

*Darjeeling, the 14th June 1895.*

RESOLUTION—No. 156T.—F.

READ—

The Report of the Royal Botanic Garden, Calcutta, for the year 1894-95.

Among the principal improvements effected during the year in the garden, which has now for a number of years been a most popular resort, may be mentioned the entire remodelling of one of the conservatories, which has been laid out on a new and more artistic plan. The road running along the river bank from the engine-house to the gate of the Sibpur College has been considerably improved, and several small buildings and a glass-roofed house for certain orchids have been erected by garden labour. Dr. King's singular talent for landscape gardening has enabled him, during the 24 years he has been in charge, to add greatly to the beauty of the garden by skilful grouping of trees and shrubs, and it now ranks high among similar institutions for picturesque scenery no less than for scientific completeness. Within the past year he has laid the public under a further obligation by bringing out a Guide to the garden, the want of which had been long felt. The book contains a map, a description of the garden, and a brief sketch of its history since its foundation in 1786, and copies can be had by purchase at the garden gates, and from Messrs. Thacker, Spink and Company, booksellers, Calcutta.

2. The Herbarium attached to the garden received material additions during the year; more than 13,000 specimens were added to it, illustrating the flora of England, Switzerland, the United States, Mexico, the Malay Archipelago, Borneo, Formosa, Australia, Natal, Assam, Northern India, Travancore and the Andaman Islands. To the contributors of these specimens, Mr. Threlton Dyer, Dr. Prain, the Smithsonian Bureau of National Exchanges, Mr. Heller, Mr. Pringle, Mr. Wray (junior), Mr. Ridley, Mr. Curtis, Dr. Haviland, Dr. Henry, Baron von Müller, Mr. Medley-Wood, Mr. Gustav Mann, Mr. Duthie, Mr. Gamble, Mr. Lawson, and Mr. E. H. Man, C.I.E., the thanks of Government are due. Nearer home, Messrs. Heinig and Haines, Deputy Conservators of Forests, contributed to the garden valuable specimens of the flora of the Sunderbans, the Bhutan Duars, and the Sikkim Terai; and the Lieutenant-Governor will be glad to see more officers of the Forest Department in Bengal cultivate botanical research and assist the garden by their collections. The collectors employed by the Calcutta garden have also added some valuable contributions. A large number of specimens was sent out from the garden to various botanical institutions in Europe, America, Australia, the Straits Settlements and in India.

3. Of the Lloyd Botanic Garden at Darjeeling there is apparently little or nothing to record. The report does not state how far it fulfils the purpose for which it was originally established, of bringing together in one place those specimens of the indigenous flora of the Eastern Himalayas which can be grown at the elevation of Darjeeling. Fuller information on this point should be given in future reports.

4. The Lieutenant-Governor desires to acknowledge the excellent work done by Dr. King during the past year, and to express his unqualified satisfaction that this Province has secured the retention of his services for at least two additional years.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

*Secretary to the Government of Bengal.*

**ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN, CALCUTTA.  
FOR THE YEAR 1894-95.**

No. 16G., of 1895, dated Darjeeling, the 13th May 1895.

From—GEORGE KING, Esq., M.B., LL.D., F.R.S., C.I.E., Superintendent, Royal  
Botanic Garden, Calcutta,

To—The Secretary to the Government of Bengal, Financial Department.

I HAVE the honour to submit herewith the 168th Annual Report of the Royal Botanic Garden, Calcutta.

**ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN, CALCUTTA,  
FOR THE YEAR 1894-95.**

THE weather during the year presented no feature of note, except that the rainfall was rather below the average. The growth of the plants in the garden, both in the conservatories and in the open ground, was satisfactory; and very little damage was done by the storms of wind which are so frequent during the hot season. The chief improvements effected in the garden during the year were the remodelling of the intermediate conservatory, and the repair and alteration of the road which runs along the river-bank from the engine-house to the College gate. The conservatory just mentioned is the one standing between that in which the orchids are exhibited during their season and the Palm-house. It is intermediate not only in situation, but also in area, size, and height; being shorter and higher than the Orchid conservatory and smaller in extent and lower in the roof than the Palm-house. This intermediate conservatory, not having been interfered with for some years past, had become rather choked with overgrown plants. Occasion was therefore taken during the rainy season to clear it of its entire contents; and, this having been done, the Curator, Mr. R. L. Proudlock, laid it out on a new plan, far more artistic than the former one. All the choicest plants in the nurseries having been planted out in this house by the Assistant Curator, Mr. H. J. Davies, under Mr. Proudlock's direction, the result (after the plants have had a little time to establish themselves) should, I anticipate, be very satisfactory. In the whole of this large house there is not a single plant growing in a pot, everything being planted in the ground; the results of ground culture having, in the other conservatories, proved so much more satisfactory than those of pot culture. Hanging from the roof are a number of baskets containing plants, and its sides and also (in part) its roof are covered by creeping plants. The changes effected on the river bank road to which allusion has above been made consisted in bringing the whole to, as nearly as possible, a uniform level; in widening it; in removing the trees which formed an avenue on its northern side; and in improving the grassy slopes on each side of it. As the road is nearly a mile long; the labour involved in carrying out all these improvements was considerable. The earth required for raising its level and for widening it was taken mostly from the bed of the river, so that it was not necessary either to enlarge any of the ponds already existing in the garden or to excavate any new ones. The removal of the trees which formed the avenue along the northern edge of the road is a great improvement, as many new vistas have been opened up into the interior of the garden. And, by the addition of much soil from the river bed, long gentle slopes have been made leading down to the portions of the garden on each side which are, for the most part, on a lower level than the road. The roads in the part of the garden to the east of the river entrance are now in excellent condition; but much remains still to be done for the improvement of those to the west of that entrance, many of these being still in an unsatisfactory condition in several respects. Towards the end of the year, a good deal was done in the way of thinning and clearing out shrubs and trees in the eastern half of the garden. During the current season this process will be continued in the western half. Amongst the buildings erected

during the year by garden labour, and out of the garden budget allotment were a lodge for durwans near the river entrance, some godowns, a carpenter's and blacksmith's shed near the Curator's house, and a glass-roofed house in the nursery for the growth of such kinds of orchids as cannot stand the heavy rainfall of the monsoon months. More houses of the latter description are much wanted, and their construction should be undertaken as soon as funds become available. I had hoped, long before now, to have been able to chronicle the completion of the road leading from Calcutta to the garden *via* the Shalimar point and along the river-bank. I regret, however, that the road is still in an unfinished state. Visitors having on various occasions expressed the opinion that a Guide Book to the garden would be useful, I prepared, during the year, a little book of this sort which Government were pleased to print, and of which copies are now to be had by purchase at the garden gates. In order to make this Guide Book intelligible, it became necessary to name the various roads in the garden, the names chosen being in all cases those of Indian Botanists, or of Botanists to whom the garden or Herbarium are especially indebted. The Guide Book is furnished with a map, and, besides a description of the garden, it contains a brief sketch of its history since its foundation in 1786.

2. *Economic plants*.—Although no plant of economic interest attracted or received special attention during the year, there was, as usual, a considerable distribution of useful plants. Many hundreds of fruit trees were given to various applicants, mostly for public purposes; and applications for rhea plants (in the cultivation of which there has recently been a slightly revived interest) were also met as far as was possible.

3. *Herbarium*.—A large amount of work has been done in the Herbarium, many scientific references having been replied to, and plants having been named for various correspondents. The collection was increased by the receipt, during the year, of 13,119 specimens from other scientific centres, from botanists in India and in other parts of the world, and from collectors sent out from the garden. The chief donor was, as usual, the Director of the Royal Garden, Kew, who presented no fewer than 2,198 specimens. Dr. A. Henry, a missionary labouring in Formosa, sent 1,066 specimens of plants indigenous to that island. Mr. J. S. Gamble, Director of the Imperial Forest School, Dehra Dun, augmented his most liberal contributions of former years by the addition, during the past one, of 455 specimens. From Mr. N. Ridley, Director of the Botanic Garden, Singapore, 667, and from Mr. C. Curtis, Superintendent of the Botanic Garden, Penang, 46 specimens of Malayan plants were respectively received. Valuable contributions of Malayan plants were also received from Mr. L. Wray, Junior, Perak, and from Dr. J. D. Haviland, Borneo. Mr. Heinig, Deputy Conservator of the Sunderbans Forest Division, sent in 363 admirably preserved specimens of the flora of that region, while Mr. H. H. Haines, Deputy Conservator of Forests, Jalpaiguri, presented 56 specimens from the Bhutan Duars and Sikkim Terai. From Mr. M. Lawson, Government Botanist, Madras, there were received 356 specimens of Travancore plants. This was a particularly acceptable contribution, as the flora of Travancore was previously but poorly represented in the Herbarium. The veteran Botanist, Baron Von Müller presented 237 Australian species. Of American plants there were received 603 plants from the Smithsonian Bureau of National Exchanges, Washington; 440 species from Mr. A. A. Heller, Louisville, South Texas; and 253 from Mr. C. G. Pringle, Mexico. Mr. Gustav Mann, for many years well known as Conservator of Forests in Assam, sent from Munich (where he has now settled) 251 specimens of orchids collected by him some years ago in the Assam Forests. From Mr. Medley Wood, Superintendent of the Botanic Garden, Natal, there were received 328 plants, and from Mr. Duthie, Director of the Botanical Survey of Northern India, 128; while Dr. Prain, Curator of the Herbarium, sent 121 plants collected by him in Switzerland during his furlough. The collections made by the direct agency of the establishment were considerable, Mr. G. A. Gammie, Officiating Curator of the Herbarium, having collected 1,434 specimens; while Mr. E. H. Man, C.I.E., to whom this garden is indebted for most efficient help spread over many years, superintended the collection in the Andaman Islands of 847 specimens. From Upper Burma there were sent by Abdul Kholil (a native collector) 720 specimens; and by Mr. J. C. Prazer (an Eurasian collector) 150 specimens. In the neighbourhood of Gaya 834 specimens (chiefly of grasses) were

collected by a garden collector named Shaik Mokim; while Jonardan, the chief of the seed house, brought from the neighbourhood of Baidynath 169 specimens. Mr. R. Pantling, of the Cinchona Plantation, sent 546 specimens of orchids. On the other hand, no fewer than 15,539 specimens of carefully named Indian plants were distributed to scientific institutions and to private botanists in various parts of the world. The recipients of the largest numbers were the Director of the Royal Garden, Kew, to whom 2,044 specimens were sent; the Royal Herbarium, Berlin, to which 1,009 were issued; the Herbarium of the Jardin des Plantes, Paris, which received 545; and the Herbarium of the British Museum, London, to which 817 were sent. Other recipient institutions in Europe were the Herbaria at St. Petersburg, Vienna, Upsala, Leiden, Utrecht, Florence, Zurich, Fribourg, Cambridge, Edinburgh, Aberdeen; and the private Herbaria of M. M. De Candolle of Geneva and Drake de Castello of Paris. Amongst Asiatic institutions, specimens were sent to the Government Herbaria at Madras, Saharanpur, Dehra Dun, Peradeniya, Buitenzorg, Singapore, Perak and Penang. Lastly, contributions were sent to three American institutions, viz., the Smithsonian Institution, Washington, the Botanical Survey of Minnesota and the Herbarium presided over by Professor Sargeant; while one was sent to the University Herbarium at Melbourne in Australia.

4. *Botanical Publications.*—No volume of the Annals of this Garden was issued during the past year. The fifth volume has, however, been in active preparation, and will, it is hoped, be issued during the current year. An important paper on *Indian Convolvulaceæ* was contributed to the Journal of the Asiatic Society of Bengal by Dr. D. Prain, Curator of the Herbarium. In the same Journal there was also published the seventh part of my *Materials for a Flora of the Malayan Peninsula*. Dr. Cummins, of the Army Medical Staff, who worked for some time in the Herbarium as a volunteer, contributed to the same journal an account of a new species of *Lathyræa* found by him near Gnatong on the Sikkim-Tibet frontier.

5. *Library.*—A few books were purchased during the year; and some presentations were received from Kew and from other scientific institutions to which contributions of Herbarium specimens and volumes of the Garden Annals had been sent.

6. *Interchange of Plants and Seeds.*—The living plants issued from the nurseries during the year amounted to 42,188 as against 22,553 plants received. Packets of seeds to the number of 3,059 were also issued, while 1,243 were received. Full details of these transactions will be found in the appendices to this report.

7. *Lloyd Botanic Garden, Darjeeling.*—The chief improvements carried out in this garden during the year were the improvement of some of the pathways and the reconstruction of the propagating house. As originally laid out, the walks were, from want of money, merely tracks cut in the soil with a layer of sand laid on the surface. Paths made after this fashion become very slippery during the rainy season; and, for some years past, Mr. Kennedy, the Curator of the garden, has been employing his labour-force whenever it could be spared in improving these paths by metalling them. A considerable instalment of this work was done during the past year, but a good deal still remains to be done to complete it. In rebuilding the propagating house only sal timber has been used; it is therefore hoped that no repairs will be necessary for some years. The ventilating arrangements of the large conservatory are still in a very unsatisfactory state. The Public Works Department have, however, undertaken to make them more efficient during the current year. The troublesome cockchafer grub which worked such havoc in the garden some years ago has now, in a great measure, disappeared; and, with proper precautions in the application of manure, it is hoped it may soon do so entirely. Besides his garden duties, which he discharged with efficiency, Mr. Kennedy superintended the planting of trees along roads and in odd corners of ground within the station.

8. The budget allotments of funds for both the Calcutta and Darjeeling gardens were spent in full. The revenue derived from the sale of surplus plants and seeds amounted for the Calcutta garden to Rs. 1,274-5-0, and for the Darjeeling garden to Rs. 880, both of which sums were credited to Government revenue.

9. A few weeks after the opening of the year, Dr. Prain, Curator of the Herbarium, proceeded to England on furlough for eight months. His furlough was, however, subsequently extended to fourteen months. Since Dr. Prain's departure, the duties of Curator have been performed with much steadiness and efficiency by Mr. G. A. Gammie, of the Cinchona Department. Mr. R. L. Proudlock, Curator of the garden, worked with assiduity during the whole year, and to his skill and good taste the laying out of the intermediate conservatory is entirely due. Mr. G. T. Lane, Assistant Curator, was in charge of the outdoor operations until November, when he was appointed to act as Superintendent of the Government gardens at Allahabad, in place of Mr. Phillips, who went on furlough. Mr. Lane worked cheerfully and well. Mr. H. J. Davies, who had been sent out from the Royal garden, Kew, a few weeks before the beginning of the year, was in November appointed to officiate for Mr. Lane, and has done excellent service. The chief writer, Babu Gopal Chandra Datta, and the other members of the office staff, have also worked to my satisfaction.

10. In the six appendices which accompany this report will be found full details of the receipts and issues of seeds and of living and dried plants.

#### LIBERALITY OF RAI JOTINDRA NATH CHAUDHARI, M.A., B.L., ZAMINDAR OF TAKI, IN THE DISTRICT OF 24-PARGANAS.

No. 923T., dated Darjeeling, the 31st May 1895.

From—SIR ALFRED CROFT, K.C. I.E., Director of Public Instruction, Bengal.

To—The Secretary to the Government of Bengal, General Department.

I HAVE the honour to state that Rai Jotindra Nath Chaudhari, M.A., B.L., zamindar of Taki, in the district of 24-Parganas, has constructed a boarding-house at his own expense for the accommodation of non-resident students attending the Taki Government School, at a cost of Rs. 3,000. The buildings, which will accommodate 25 students, and which consist of six pukka one-storied rooms and a thatched house for kitchen and dining purposes, together with the plot of ground, measuring about 7 cottahs, on which they stand, have been made over in trust to the Head Master of the Taki Government School by a registered deed.

2. I beg to recommend that the thanks of Government may be conveyed to Rai Jotindra Nath Chaudhari, M.A., B.L., in the usual manner.

No. 119T.G., dated Darjeeling, the 12th June 1895.

From—C. E. BUCKLAND, Esq., Secy. to the Govt. of Bengal, General Dept.,

To—The Director of Public Instruction, Bengal.

WITH reference to your letter, No. 923T., dated the 31st ultimo, I am directed to request that you will be so good as to convey to Rai Jotindra Nath Chaudhari, M.A., B.L., zamindar of Taki, in the 24-Parganas, the thanks of Government for his liberality in erecting at his own expense a boarding-house, costing Rs. 3,000, for the accommodation of non-resident students attending the Taki Government School.

# ADMINISTRATION REPORT OF THE BENGAL METEOROLOGICAL DEPARTMENT FOR THE YEAR 1894-95.

The following is published for general information.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

The 17th June, 1895.

Secy. to the Govt. of Bengal.

DURING the whole of the past year the Bengal Meteorological Department was under the control of Mr. A. Pedler, the permanent Meteorological Reporter to the Government of Bengal.

2. The changes in the administration of the Department have again been of minor importance.

3. The number of meteorological observatories submitting reports to the Bengal Meteorological Department on the 31st March 1895 was 72, or four more than on the corresponding date in 1893, and two more than that in 1894. The voluntary observatory at Kalimpong, which was in abeyance during 1892 and 1893, has been re-opened, and regular records have been kept from the 14th September 1894. In addition to this, at the instance of Mr. J. C. White, Political Officer in Sikkim, a voluntary observatory has been started at Yatung in Tibet, and placed in charge of Mr. F. E. Taylor, the Chinese Commissioner of Customs, stationed at Yatung. Yatung is in a gorge running from the Jelep Pass roughly at right angles to the Chumbi Valley, the elevation being about 10,400 feet, and it is hoped the records of this observatory will help to extend our knowledge of meteorology in this direction. The observations were commenced from the 26th June 1894. In addition to the ordinary thermometric and rainfall observations, Mr. Taylor has sent in valuable information regarding snowfall in that part of the Himalayas.

4. During the year arrangements were made to start a voluntary observatory at the Dapoota Tea Estate in Tezporé (Assam) under Mr. F. E. Welsh, Manager, Dapoota Tea Estate. The necessary instruments have been supplied, and it is hoped the observatory will be started shortly.

5. Those 72 observatories are arranged under the following heads:—First class observatory 1, second class 16, third class 38, voluntary observatories 7, and observatories not directly under the Bengal Reporter, but submitting daily observations in connection with the storm-signal service, 10.

6. The following table will show the names and distribution of the observatories in question:—

First class observatory.	Second class observatories.	Third class observatories.	Voluntary observatories.	Other observatories reporting to the Meteorological Department, but not under the control of the Meteorological Reporter to the Government of Bengal.

7. The departmental observatory established under the Port Officer, Madras, on the 7th January 1889, in connection with the Bay of Bengal Storm Signal Service, was abolished from 1st May 1894, the present Government Astronomer (Mr. Michie Smith) having agreed to supply the daily 8 a.m. observations for the Daily Weather Report as well as extra observations during storms. The observations that are now shown in the Bay of Bengal Daily Weather Report are those taken at the Government observatory at Madras.

8. The following rainfall-recording stations were added during the past year:—

District.	Station.	District.	Station.
Tibet ... ..	Yatung.	Sonthal Parganas ...	Barharwa.
	Jamalpur.		Danrey (subse-
Monghyr ... ..	Gidhour.	Singbhum	quently transfe-
			red to Bansil).
			Monoharpur.

while the station of Fort Aijal has been excluded, as the returns from this station were found to have been regularly published in the *Assam Gazette* by the Assam authorities. The station of Danrey in the Sonthal Parganas district has been abolished, and Bansil in Bhagalpur started in its place.

9. The total number of rainfall-recording stations, as it stood on the 31st March 1895, was therefore 225, including the stations which send in monthly returns only.

10. In the Administration Report for 1893-94, it was remarked that, owing to want of funds and other unfavourable circumstances, only 12 observatories, out of a total of 54 regular departmental observatories could be inspected.

It was also remarked that the Government of India sanctioned, as a temporary measure, the plan of allowing a clerk from the Calcutta Meteorological Office to inspect the observatories and to test the condition of the instruments. Under this arrangement Babu Jati Lal De was again deputed to inspect certain observatories in Bengal during the past year, and the number of observatories inspected by him was 22. In addition to this, Mr. Pedler visited six observatories, and Mr. Gilliland, the then Officiating Second Assistant Meteorological Reporter to the Government of India, three observatories, thus making a total of 31 observatories, the largest number inspected during the past ten years. The system of inspecting observatories by subordinate Officers has worked successfully, and the Government of India have, on the application of the Meteorological Reporter to the Government of India, sanctioned the arrangement permanently.

11. The following table shows the stations that were visited during the past year, the dates on which they were visited, and the officer who inspected them, as also the condition of the observatories in which they were found at the time of inspection:—

Number.	STATIONS.	By Mr. Pedler, Meteorological Reporter, Bengal.	By Mr. Gilliland, the then Officiating Second Assistant Meteorological Reporter, India.	By Babu Jati Lal De, Clerk, Meteorological Office, Calcutta.	Condition of the observatory at the time of inspection.

30	Tavoy ...	.....	10th October 1894	.....	Very good.

Mr. Pedler visited Jalpaiguri twice, so that altogether 32 visits of inspection have been made by different officers of the Department.

12. Gaya had to be visited twice. As the observatory was found to be in a most unsatisfactory condition on both inspections, and as the observations were generally of very doubtful value, Mr. Pedler, when he visited the observatory in March last, dismissed Mukund Lal, the permanent observer, and appointed Babu Jagobandhu Gupta, the Civil Hospital Assistant, attached to the cholera hospital as observer.

13. On the occasion of Mr. Pedler's visit to the Jalpaiguri observatory in March 1895, he found that the work of observations was delegated to a clerk of the post office who was not properly trained, the permanent observer seldom taking the observations himself. The Jalpaiguri observations had for some time past been of very little value, the cause of which was traced to their being taken by an untrained observer without the knowledge of the Meteorological Office. The observer, Babu Dinanath Mitra, was immediately dismissed, and a clerk of the post-office appointed in his place. The matter has been reported to the Postmaster-General, Bengal, and to the Government of Bengal for such action as they may think necessary.

14. In the case of the observatories which could not be visited during the past year, the only test of the character of the work performed by them is the critical examination and comparison of the observations taken at each station with those at neighbouring stations.

15. *First class observatory.*—The only observatory of this class is at Alipore (Calcutta). It is under the control of the Imperial Reporter, and is under the direct charge of the Second Assistant to the Meteorological Reporter to the Government of India. Its working cannot therefore be reviewed in this report. The 8 A.M. observations made at this observatory are supplied daily to the Bengal Reporter with the utmost punctuality. In addition to this, extra observations whenever required during storms are promptly supplied. The observations throughout the year have been of a high order of accuracy.

16. *Second class observatories.*—Eight out of 16 second class observatories were inspected during the year. Of the remaining 8 observatories, False Point, Dhubri, Hazaribagh, Coconada, Saugor Island, and Narayanganj submitted accurate observations throughout the year. The observer at Sibsaagar has considerably improved, while the observer at Silchar seems to have become careless, as the reports sent by him appear at times to be faulty.

17. *Third class observatories.*—Twenty-two out of 38 observatories of this class were inspected during the year. Of the remaining 16 observatories the observers at Comilla, Krishnagar, Mymensingh, Rampur Boalia and Sirajganj submitted accurate observations, and those at Bankura, Malda, Bogra, Gopalpore, Nellore and Rangpur submitted observations only of a fair character, while the observer at Cuddalore seems to have been careless in his work. Thirteen mistakes were made by the Pamban observer, and hence his observations cannot be said to have been good. Gnatong made numerous errors in framing the weather telegrams, but generally his observations were good. The observer at Faridpur has been extremely careless, and Daltonganj has continued to be the worst observatory in Bengal. The Daltonganj barometric observations, which are the most important of all, have been found to be so very carelessly taken that they had to be rejected altogether.

18. *Voluntary observatories.*—Mr. Tasker, Lighthouse-keeper, Shortt's Island, has continued to favour the Department with his daily observations, and most valuable extra observations at short intervals during storms. The latter have been of exceptional value, as they were largely utilised in the discussion of the history of storms which visited that part of the Bay. The Meteorological Reporter to the Government of India has again awarded to Mr. Tasker a grant of Rs. 60 out of the Special Storm Observation Fund.

Mrs. A. A. Nursing Row continues to send in the daily 8 A.M. observations taken at the Vizagapatam Observatory, of which she is the proprietress, as also extra observations during storms whenever they were required.

The observations received from the Guntok Observatory have been accurate, as also those taken at Yatung under the direction of Mr. Taylor as mentioned before.

Tura, Demagiri and Lungleh have continued to submit observations of doubtful value, and it is under contemplation to discontinue the observations from Tura and Demagiri at the close of the present year.

The thanks of the Department are due to Mr. Tasker, of Shortt's Island, Mrs. A. A. Nursing Row, of Vizagapatam, Mr. White, Political Officer at Sikkim, and to Mr. Taylor, of Yatung, for their valuable assistance.

19. *Awards for storm and special observations.*—The system of remunerating the observers who take special observations during storms has been continued, and the Meteorological Reporter to the Government of India has awarded grants to the following observers under the Bengal Reporter. The amounts depend chiefly upon the value of the observations taken:—

Station.	Amount.
1	2
	Rs.
Barisal ...	2
Chittagong ...	15
Faridpur ...	2
Jessore ...	1
Mymensingh ...	3
Midnapore ...	1
Narayanganj ...	4
Puri ...	25
Saugor Island ...	20
Shortt's Island ...	60
Coconada ...	20
Cuddalore ...	3
Gopalpur ...	6
Pamban ...	1

20. The rain-gauge stations have, on the whole, worked satisfactorily except in a few cases, where the reports have either been found to be incorrect or to have been submitted irregularly. There are certain indigo or tea planters who submit rainfall returns to this Department, and I have to thank these gentlemen for their ready co-operation.

21. In the Administration Report for 1893-94, it was remarked that the system of inspecting rain-gauges by the Collectors, Deputy Magistrates or the Civil Surgeons had been much neglected, 19 out of 320 rain-gauges having been inspected during that year. The Government of Bengal since issued further orders for the inspection of the rain-gauge stations, and it is satisfactory to notice that 120 rain-gauges were inspected during the past year. Some of the rain-gauges were inspected three or four times, and taking this fact into consideration, it was found that at the close of the past year no less than 174 visits of inspection were paid to the rain-gauge stations against 102 in 1891-92, 58 in 1892-93, and 19 in 1893-94. In this connection it may be remarked that not a single rain-gauge was inspected in the following districts:—Burdwan (having 5 stations), Midnapore (8), Jessore (5), Rajshahi (5), Dinajpur (6), Darjeeling (6), Faridpur (3), Palamau (4), and Singbhum (8 stations).

22. The short annual report of the meteorology of Bengal in the year 1893, with two maps illustrating the actual and percentage rainfall, was prepared and submitted to the Government of Bengal on the 25th July 1894 for incorporation in the Administration Report of the Government of Bengal.

The report on the meteorology of Bengal for the monsoon season of 1894 was prepared and submitted to Government with the usual number of illustrative maps prepared by hand. This report was submitted to the Government of Bengal on 31st December 1894, and was published in the *Calcutta Gazette* of the 9th January 1895.

23. The weekly and monthly Meteorological Reports for Bengal and Assam were continued under the system described in the Administration Report for 1893-94. There has practically been no change in these reports, except that the rain-gauge stations started during the year were included in the rainfall portion of these reports.

24. *The Bay of Bengal Daily Weather Report with Chart*—Was issued daily throughout the year without a single exception. It was generally issued not later than 11 A.M. The only change made in this report was that a further correction for constant gravity at latitude  $45^{\circ}$  is applied to the barometric observations which are included therein. This report was issued to 48 Government officials free of charge and to 32 subscribers at the rate of Rs. 2 per month. The subscriptions received during the year have been sufficient to meet the cost of the lithographic establishment, repairs to presses, &c., and there was a considerable balance in hand on the 31st March 1895, which is kept to provide new presses, &c., when required.

25. *The Bengal Daily Weather Report*—Dealing with the provinces of Bengal and Assam was published during the past year from 28th April to 10th November. No change whatever was made in this report. It was issued to 106 Government officials free of cost and to 19 subscribers at the rate of Rs. 2-8 per month.

26. The daily flag signal message to Saugor Island and the daily weather telegram to the Port authorities at Madras, Akyab, Rangoon, Negapatam and Coconada were continued throughout the year. This weather telegram was sent to the Port Officer, Chittagong, in accordance with orders of the Government of Bengal from 16th May to 15th November.

27. The system of forwarding meteorological information from the pilot brigs at the Sandheads by flag hoists, by the pilots of inward-bound vessels when passing Saugor Island has been continued, and 354 telegrams and post-cards were received in this way during the year.

28. The system of telegraphing a summary of the weather (by a Special Code) experienced by the Commanders of the steamers of the British India Steam Navigation Company during their voyages from Madras to Rangoon, Calcutta to Rangoon, &c., has been continued, and has worked successfully during the past year, and 145 telegrams were received in this way.

Storm-Signal Service.

29. The working of the Bay of Bengal Storm-Signal Service has been unaltered during the year.

30. The dates of the principal storms occurring during the year are given in the first of the two following tables, and the action taken in the matter of issuing storm warnings and hoisting storm signals is indicated in the second of these tables:—

Table giving a brief statement of the storms which affected the Bay of Bengal coasts during the year 1894.

No. of storm.	Period of depression or storm.	Character of storm.	Coast affected.
1	2	3	4
1	April 26th to 29th ...	Small cyclonic storm of considerable intensity formed in the Andaman Sea. The storm originated to the west of the Tenasserim coast on the 27th or the morning of the 28th. It developed rapidly on that day and advanced into the Gulf of Martaban, and it was a little to the south of the mouth of the Rangoon river at 8 A.M. of the 29th, and was moving in a north-easterly direction. The centre of the storm passed inland about mid-way between Rangoon and Moulmein about 11 A.M. on the 29th and afterwards broke up during the night of this date. It was a rather severe storm, though small in extent, and appears to have done a considerable amount of damage.	Burma coast.
2	June 12th to 15th ...	Small cyclonic storm originating in the north-east of the Bay and over the neighbouring parts of South-East Bengal on the 12th, the centre of which was on the 13th not far from Chittagong. Immediately after its formation, it began to move in a north-westerly direction, and on the 14th was between Jessore and Faridpur, but it had filled up to a certain extent. On the 15th it was in Chota Nagpur, probably not far from Chaibassa, but was then decidedly feeble, and on the 16th had passed away from the province altogether.	Bengal coast.
	June 20th to 23rd ...	Feeble barometrie depression formed in the north of the Bay on the 20th, and after developing slightly passed inland during the 21st, and on the 22nd was between Chaibassa and Balasore, while on the 23rd it was to the west of Chota Nagpur.	Bengal coast.
	July 8th to 14th ...	Severe storm formed in the east of the Bay on the 8th and developed moderately up till the 10th, when it began to move in a westerly direction, and the centre crossed the Orissa coast almost immediately over Puri at about 2 A.M. of the 12th. It broke up in Lower Sind on the 14th and 15th of July.	Orissa coast.
	July 14th to 23rd ...	Severe cyclonic storm formed in the north of the Bay on the 14th or 15th with a centre probably to the west of the middle of the Bay, and it advanced slowly in a north-north-westerly direction towards the north-west angle of the Bay, crossing the coast a little to the south of Balasore soon after noon of the 17th. It	Orissa and Bengal coasts.

No. of storm.	Period of depression or storm.	Character of storm.	Coast affected.
1	2	3	4
6	July 22nd to 28th ...	broke up in Lower Sind on the 23rd and 24th. Severe cyclonic storm formed in the north-east of the Bay on the 22nd and 23rd, and rapidly developed in severity. It advanced inland in a west-north-westerly direction, and on the morning of July 24th it was close to Calcutta. It afterwards passed between Midnapore and Bankura, and on the 28th it filled up near Sutna.	Bengal coast.
7	August 6th to 9th ...	Feeble barometric depression formed over the north-west angle of the Bay on the 6th, and advanced westwards into the Central Provinces, where it broke up on the 9th.	Orissa coast.
8	August 11th to 19th ...	Moderate depression formed over the south-east of the province, and gradually advanced in a north-westerly direction to Nowgong, where it filled up. This depression was in existence for no less than eight days.	Bengal coast
9	September 23rd to 27th ...	Feeble cyclonic storm formed at the head of the Bay on the 23rd, which steadily intensified until the afternoon of the 27th, when it passed inland near Puri as a storm of moderate severity.	Orissa coast.
10	October 2nd to 6th ...	Barometric depression formed at the head of the Bay, the centre of which passed inland on the evening of October 2nd between Balasore and Saugor Island, moving in a north-westerly direction. It broke up near Naini Tal.	Bengal and Orissa coasts.
11	October 18th to 22nd ...	Cyclonic storm formed in the centre of the Bay, and advanced in a west-north-westerly direction, crossing the coast between Nellore and Madras on the early morning of the 21st, and it afterwards apparently broke up on the 22nd.	Coromandel coast.
12	October 29th to Nov. 4th ...	Very large but rather diffused cyclonic storm generated on the 29th October near the Andaman Islands, and then advanced slowly across the Bay, crossing the coast between Coconada and Masulipatam about 6 A.M. on November 2nd. It broke up after passing inland for a short distance on November 4th.	Circars and Ganjam coast.

Table showing the action taken by the Calcutta Meteorological Office in warning the coasts affected by the storms enumerated in the previous table.

Storm number	HOISTING OF STORM SIGNALS.			WARNING OF PORTS BY CAUTIONARY TELEGRAMS.	
	Ports ordered to hoist signals.	When hoisted.	When lowered.	Ports warned by cautionary telegrams.	Time and date of despatch of cautionary telegrams.

31. The staff of the Meteorological Office has remained practically unchanged during the past year. Under the able

Office Establishment.

superintendence of the Head Clerk, Babu Fanindra

Mohan Basu, the office has worked smoothly and very efficiently, and this has enabled the numerous reports, returns, maps, &c., published by the Bengal Meteorological Department to be issued regularly and with great punctuality throughout the year.

32. The work of Babu Jati Lal De as Inspector of Observatories or Instructor of Observers was not under my supervision, but I have been given to understand that he has carried it out with much energy and success. The arrangement was temporary at first, and its value, as regards efficiency, is shown by the fact that it has recently been made permanent by the Meteorological Reporter to the Government of India.

METEOROLOGICAL OFFICE,

CALCUTTA;

The 15th May 1895.

C. LITTLE,

Offg. Meteorological Reporter to the Govt. of Bengal.

# WEATHER AND CROP REPORT

For the week ending the 17th June, 1895.

**Burdwan.**—Rainfall at Burdwan 1·39. Weather hot and rainy at intervals. Land is being prepared for *aman* rice. Common rice sells from 10 to 21 seers a rupee.

**Midnapore.**—Rainfall 1·74. Weather cloudy. Sowing of *aman* paddy continues. Prospects of indigo, sugarcane and *til* (sesamum) good. Tobacco and *jara* doing badly. Common rice selling at 16 to 20 seers a rupee. Want of good drinking water felt in most part of Contai subdivision, where more rain is reported to be urgently needed.

**24 Parganas.**—Rainfall at Sadar 1·70. Weather seasonable. Prospects of crops good except on the north. Sowing of *aus* and jute completed. Ploughing going on for sowing of *aman* on high lands. Condition of cattle good. Fodder and water sufficient. Rice sells at—

	Srs.
Sadar	11 to 13
Barasat	14
Diamond Harbour	15
Basirhat	19

per rupee.

**Murshidabad.**—Rainfall 1·51. Weather seasonable. Harvesting of *til* continues. Indigo and sugarcane doing well. Late rain has done good to crops. Fodder available. Price of common rice 16 seers per rupee.

**Khulna.**—Rainfall at Khulna 74, Bagerhat 1·97, Satkhira 3·86. Weather hot. *Aus* and jute sowings almost over. Weeding of *aus* and jute going on. Cultivation of lands for *aman* continues. Common rice sells from 17 to 23 seers per rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall 1·96. Weather very hot. Standing crops good. Price of common rice 15 seers per rupee. No cattle-disease, nor any complaint for fodder or drinking water.

**Rangpur.**—Average rainfall 2·46. Weather very hot. Rain on Saturday (15th June) has greatly benefited all the crops. General outlook now promising. Fodder sufficient.

**Pabna.**—Rainfall 93. Weather hot. Clouds and rain since yesterday (16th). Standing crops doing well. Common rice selling at 16 seers a rupee at Pabna and 14 seers at Sirajganj. Fodder and water sufficient.

**Dacca.**—Rainfall 37. Weather hot. Prospects of crops good. *Aus* is being harvested. Common rice selling at 19 seers per rupee. No cattle-disease. Fodder plentiful.

**Chittagong.**—Rainfall 4·54. Weather hot. Ploughing and sowing in progress. Prospects of crops fair. Water and fodder sufficient. Prices have slightly risen.

**Patna.**—Rainfall 3·46. The rain has been opportune for agricultural purposes. Fields are being prepared for *bhadoi* and paddy cultivation. Common rice selling from 16½ to 18 seers per rupee.

**Gaya.**—Report not received.

**Champaran.**—Rainfall at Motihari 2·11. Sowing of *bhadoi* and *aghani* crops has commenced. Fodder and water for cattle sufficient. Common rice selling at 16 seers a rupee.

**Darbhanga.**—Rainfall 39. Weather cloudy. More rain wanted for *bhadoi* sowings. Fodder and water sufficient for cattle. Prices stationary.

**Bhagalpur.**—Rain on 16th. Weather cool. Sowing of *bhadoi* was being delayed and paddy seedlings were suffering from want of rain. Common rice sells at 17 seers 10 chitaks per rupee. Fodder and water-supply sufficient.

**Purnea.**—Rainfall 2·06. *Bhadoi* rice, jute and indigo are doing well. More rain is wanted for the transplantation of *aghani* paddy. Manufacture of indigo has begun. Fodder and water sufficient. Cattle-disease called *chahmasia* or sores in hoofs is prevalent in parts of thana Araria. Common rice selling from 16 to 20 seers a rupee at Sadar.

**Cuttack.**—Rainfall 1·73. Weather hot and cloudy. Rain well distributed. Sowing of *beali* and *sarad* rice in progress. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 25 seers per rupee.

**Hazaribagh.**—Weather unsettled: cloudy occasionally. Ploughing and sowing in progress. Sugarcane doing well. Common rice selling at 13 to 16 seers per rupee.

**General Summary.**—There was rain over the whole province during the week. It has been generally very beneficial, especially in Bihar, where it was much needed. The cultivation of lands for the *bhadoi* crops and for the winter rice is in progress. The standing crops of jute, early rice, sugarcane and indigo are generally reported promising. In Dacca the early rice is being harvested, and the manufacture of indigo has begun in Purnea. Cattle-disease is said to be prevalent in parts of thana Araria in Purnea; elsewhere cattle are in good condition. The price of common rice continues stationary. It is below the average of the previous four years.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,  
The 18th June, 1895.

C. E. BUCKLAND,  
Secretary to the Govt. of Bengal.

*The following Statement shows the Quantities of the Principal Staples of Traffic imported into Calcutta from the Interior during the month of March, 1895.*

# SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF MAY 1895.

WEATHER during May has never been seriously disturbed either in the Bay or in Bengal; and during the greater part of the month fine settled weather prevailed, if the local thunderstorms and occasional rainfall be left out of consideration. But towards the end of the month there was a period of unusual heat, at times over a great part of the province, though chiefly in the southern and western districts. At the same time pressure underwent larger changes, and a well-marked feature of the weather was the strong winds, which developed in the north of the Bay and in Lower Bengal.

It will be remembered that towards the end of April a cyclonic storm formed in the Bay and crossed the Arakan coast, after which unsettled weather with steep gradients and strong winds prevailed for some days in Bengal. There was also in the west of the province a considerable excess of temperature, which gave way on the occurrence of thunderstorms in the districts affected.

The unsettled weather in May had a similar origin in a disturbance over the Bay, but there was a great difference from that of April. There was no well-defined storm, and only a very shallow depression was observed to cross the coast, taking a south-easterly direction into Burma. The steep gradients which had been gradually developing over the south of the Bay moved northwards and remained, for some days near the end of May, in the north of the Bay and in Lower Bengal, during which time strong winds and generally unsettled weather prevailed.

The following table shows how the winds at the beginning of the month were still, to a certain extent affected by the depression which occurred in April, how a period of comparatively calm weather followed, and how a steady increase of wind velocity was ended by the strong winds which blew during the last few days of the month.—

	WEEK ENDING 4TH MAY 1895.		WEEK ENDING 11TH MAY 1895.		WEEK ENDING 18TH MAY 1895.		WEEK ENDING 25TH MAY 1895.		WEEK ENDING 1ST JUNE 1895.		Mean velocity for May 1895.
	Average velocity.	Highest velocity.	Average velocity.	Highest velocity.	Average velocity.	Highest velocity.	Average velocity.	Highest velocity.	Average velocity.	Highest velocity.	
Saugor Island	5.6	744	320	360	391	413	106	600	634	1,000	67
Narayanganj	238	347	65	101	119	171	183	340	540	100	140

Patna	238	271	132	255	128	180	160	320	150	155	118

In the first column under each week is given the average daily velocity, and in the second the highest daily velocity during that week in miles. It will be seen that velocity fell largely at all the stations about the beginning of the month, and that there was a steady increase during the rest of the month except at Patna, where the maximum occurred between the 18th and 25th. The difference at the last station was probably due to the low pressure over the north of the province, causing a reversal or weakening of the easterly winds which usually prevail in Bihar. This arrangement of pressure had another important effect in causing the hot westerly winds which led to the intense heat in the south-west of the province during the latter part of the month.

During the settled weather which prevailed in the early part of the month, with the exception of the first few days, temperature was not, as a rule, different from the normal. The local thunderstorms caused an occasional fall, but there was an immediate recovery. At times, however, during the first week, and also towards the end of the month, there were large contrasts between the daily means in different parts of the province.

The following table shows these differences in degrees, the signs indicating excess and defect:—

MAY.	Station.	Difference from normal.	Station.	Difference from normal.
1	2	3	4	5
1st ...	Patna	—5.1	Cuttack	+4.1
" ...	Silchar	—6.2	Midnapore	+6.7
" ...	Bogra	—7.6	Calcutta	+2.4
6th ...	Buxar	—14.6	Silchar	+5.8
7th ...	Hazaribagh	—9.4	Narayanganj	+4.6
" ...	Ranchi	—8.9	Silchar	+5.4
28th ...	Hazaribagh	+5.8	Narayanganj	—2.7
" ...	Gaya	+6.4	Dhubri	—4.8
26th ...	Ranchi	+11.9	Berhampore	—5.4
28th ...	Dehri	+15.3	Silchar	—6.2
" ...	Bankura	+16.8	Dhubri	—2.4

On the 1st low temperature was in the north of the province, and the hotter weather in the south or south-west. On the 6th and 7th in the west as compared with the east, while at the end of the month there was a complete reversal. Owing to these variations the mean temperature for the month does not differ very largely from the normal. In Chota Nagpur there was excess of  $2^{\circ}$ , and in North and East Bengal of about half a degree.

The calm weather during the first half of the month was probably due to the high pressure which generally prevailed, especially in the western districts, up till the 12th. After that readings were relatively low over Bengal and defect increased, though irregularly, till the end of the third week, when there was a large defect. The differences from normal pressure have, on the three occasions, when temperature was most abnormal, been opposite to those of temperature. On May 1st readings were very nearly normal in Orissa, and a tenth of an inch above in Assam. On the 6th and 7th the greatest excess was in the west of Bihar and Chota Nagpur, and the least in East Bengal and Assam; while towards the end of the month defect was much greater in the west of the province than in the east.

About the 12th an advance of monsoon winds began at the Ceylon stations, and continued till about the 20th. Soon afterwards they became felt in Burma, and the unsettled weather, which led to the strong winds in the north of the Bay, slowly developed. As stated above, no very definite depression formed, but there were steep gradients in the south of the Bay and very uniform readings at the northern stations. The influence of the disturbance was very slight on the wind directions on the Orissa Coast, as they remained south-west, and it was only at Akyab, Chittagong, and Noakhali that winds became northerly. A rise of pressure began in the south-west of the Bay about the 20th, and spread quickly northwards. It was rapid in Burma and moderate at the other coast stations, while inland there was a slow fall. The effect of these changes was to transfer the steep gradients northwards, and to cause a shallow depression over Bengal, where readings were a fifth of an inch below the normal. Westerly winds prevailed in the west and centre of the province, and it was owing to this hot westerly wind that temperature rose so rapidly at many stations in Orissa, Chota Nagpur and South-West Bengal. The rise of pressure continued on the 21st rapidly in Burmah and Arakan, and at a diminishing rate towards the north-west. The area of lowest pressure was therefore forced westward and the westerly winds confined to Orissa and Chota Nagpur. The rainy weather which followed the slight disturbance in the east of the Bay slowly extended northwards, and heavy rain became general in East Bengal and Assam and in parts of North and South-West Bengal. On the 22nd there was again a more rapid increase of pressure in the east than in the west, and gradients became steep from east to west. This distribution caused strong southerly and easterly winds in all districts except Orissa and Chota Nagpur, where the hot westerly winds continued. Thunderstorms became more general and led to a large reduction of temperature. Comparatively cool weather shortly after became general over the whole province except in Orissa and Chota Nagpur.

*Pressure*.—Was above the normal during the early part of the month, excess being generally below a tenth of an inch. The change began about the 13th, and from then till the end of the month relatively low pressure obtained especially during the last week, when there was a large defect, at times amounting to about a quarter of an inch. The means for the month are below the normal at all stations by amounts varying from  $\cdot 01$  inch in North Bengal to nearly  $\cdot 05$  inch in part of South-West Bengal.

*Temperature*.—Changes have been unusually large at times especially towards the end of the month. At the beginning there was comparatively cool weather, but during the fine settled weather which followed temperature steadily rose and reached a maximum about the 11th in all districts except Assam and North Bengal, where it began to fall about the 8th. The average excess for the week ending on the 11th was over  $2^{\circ}$  in Bengal and Assam, and there was defect of nearly  $4^{\circ}$  in Chota Nagpur. After a temporary fall it again began to rise, and for some time was above the normal over a great part of the province. The unsettled weather which followed the slight disturbance in the Bay led to low temperatures in the eastern half of the province, but the change in the western districts was smaller, and excess continued till the end of the month.

The highest maximum temperature recorded in South-West Bengal was  $116^{\circ}\cdot 1$ , in Orissa  $116^{\circ}$ , in Chota Nagpur  $115^{\circ}\cdot 7$ , in Bihar  $113^{\circ}\cdot 5$  and in North Bengal  $105^{\circ}$ .

The greatest mean excess for the whole month is  $2^{\circ}$  in South-West Bengal and Chota Nagpur. In Bihar, Orissa and Assam it is between  $1^{\circ}$  and  $2^{\circ}$ , and in East and North Bengal under  $1^{\circ}$ .

*Rainfall*.—In the early part of the month, while weather was still slightly disturbed, rainfall was more copious over the whole province than is usual at the beginning of May. During the fine weather that followed very little rain fell, but it increased about the middle of the month when thunderstorms were very frequent. During the last half of the month, heavy rain fell in East Bengal, but in the other districts there was considerably less than the average.

For the whole month East Bengal alone has received more than the normal, the fall being 11.33 inches as compared with 8.52 inches. South-West and North Bengal, Chota Nagpur and Bihar are each below the normal by less than 1 inch, and in Orissa there is defect of more than 2 inches, the actual fall being less than half the normal.

The following table gives full data for comparison of the actual and normal rainfall of the month of May for all districts of the province. The figures are derived from the average and actual rainfall of the rain reporting stations in each district, due allowance being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly tables. The first column gives the normal or average district rainfall as determined from the observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfall of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third in a slightly different form, stating as a percentage how much the district rainfall of the month varied in excess or defect from the normal : —

Percentage Table for May 1895.

Mean for 6 days.  
 The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the  
 The number of the atmosphere is expressed in percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 100. The  
 at the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question  
 in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 15th of June 1895.

DISTRICT OBSERVATIONS.																	District.

last ten years. The variations are negative when the mean of the week is less than the corresponding normal mean, and positive when greater. The numbers denoting cloud amount represent the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal numbers are the annual means of the district, and the numbers in the district are the annual means of the sub-divisions.

## Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 15th of June 1895.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY,  
THE 15TH OF JUNE 1895.**

THE most notable features of the weather of the past week have been the continued high pressure over the province as compared with the normal and the uniform distribution over the area including Bengal and the Bay. A direct consequence has been the calm weather which has prevailed, and the absence of rainfall especially in Assam and the eastern districts of Bengal. As excess has been greatest in the central districts and has diminished towards the east, the easterly current which usually blows from Assam across North Bengal has been weaker than usual and for a few days in the middle of the week was replaced by a westerly current up the Brahmaputra Valley.

On the 9th, the first day of the week, there was excess of between  $\cdot 15$  inch and  $\cdot 2$  inch over South-West Bengal, and from there it diminished in all directions, slowly over the north of the Bay, but more quickly in the south. A fall of pressure had begun, and this continued throughout the week, slowly as a rule. There was a slow rise on the 10th which was followed by a brisk fall on the 11th, and these variable changes appear to have caused slightly unsettled weather, because thunderstorms with light rain were more general over the province than at any other time during the week. The rain fell on the 10th in the extreme west of the province and spread eastward on the 11th. The causes must therefore have been different from those which usually lead to thunderstorms at this season as the rain begins in the east and spreads westward. A fall of temperature followed the rainfall beginning in south-west and extending towards the north-east, and on the 11th there was defect in mean temperature over the whole province except in North Bengal and part of Assam, where there was still excess of two or three degrees.

As the pressure continued to give way over Bengal and Assam, readings became relatively low in the east, and westerly winds began at first in Assam and afterwards over a great part of the province. On the 12th directions were south-west or west in East Bengal and Assam, and also at Gnatong, and on the 13th the only easterly winds were reported from the north of Bihar. When this westerly current became general temperature steadily rose and fine calm weather prevailed till towards the end of the week, when again a series of thunderstorms spread over the province from the west. On the 15th, the last day of the week under review the thunderstorms were confined to Bihar and North Bengal, but some very heavy falls of rain occurred in these districts, and temperature fell several degrees in the west of Bihar. The steady fall of pressure throughout the week resulted in an almost normal distribution over Bengal, and along the west coast of the Bay, while in the east of the Bay a low pressure area was developing and towards it strong westerly winds were blowing across the south of the Bay.

With the removal of this high pressure over Bengal, the northward motion of the monsoon current has become more likely. The weakening effect of the obstacle, which it offered to the free movement of the moist current from the Bay, has been very apparent in the rainfall for the week. It has been very scanty in all districts, but especially in East and North Bengal which receive heavy rain at this time of the year. The normal rainfall for North Bengal is  $4\cdot 51$  and in East Bengal  $5\cdot 58$  inches, whereas the former has received only  $1\cdot 59$  inches, chiefly on the last day of the week, and the latter less than one inch. In Assam also very little rain has fallen, Sibsagar reporting none, Dhubri a third of an inch and Silechar  $3\cdot 76$  inches.

*Pressure.*—As stated above has been steadily falling throughout the week, and has been above the normal, though only by small amounts at the end. There is, therefore, excess in mean pressure at all stations, in Assam and part of North Bengal by less than  $\cdot 1$  inch and in other districts by between  $\cdot 1$  inch and  $\cdot 15$  inch.

*Temperature* has generally been below the normal by small amounts in Orissa and above elsewhere, excess increasing towards the north-east. On the 11th, and about the end of the week the area of comparatively cool weather extended eastward, but only over the western districts. Mean temperature for the week is below the normal in Orissa by about  $1^{\circ}$ , and above elsewhere, by small amounts in Chota Nagpur and South-West Bengal, by  $1\cdot 6^{\circ}$  in East Bengal,  $2\cdot 7^{\circ}$  in Assam, and  $3^{\circ}$  in Bihar and North Bengal.

*Rainfall* has been light and scattered over a great part of the province. Showers were fairly general in the west of the province on the 10th and 11th and on the latter date in other districts. Heavy showers fell in parts of Bihar and North Bengal on the 15th. With these exceptions weather has been almost rainless. The mean falls for the larger subdivisions are much below the normal in all districts, especially in East and North Bengal. Bihar and Orissa received about half the normal fall, Chota Nagpur one-third, South-West and North Bengal one-fourth and East Bengal only one-fifth.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 15th of June 1895:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.				Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1895.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph. The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

$\Delta$  dow; d, drizzling rain; o, overcast; t, thunder; g, gloomy; p, passing temporary showers;  $\Delta$ , lightning.

## THE CONSTRUCTION OF A BOARDING-HOUSE FOR THE STUDENTS OF THE CALCUTTA MADRAS.

### GENERAL DEPARTMENT—EDUCATION.

*Darjeeling, the 21st June 1895.*

RESOLUTION—No. 176T.—G.

READ—

Letter No. 877, dated 12th February 1895, from the Director of Public Instruction, Bengal.

Letter No. 1095, dated 16th March 1895, to the Director of Public Instruction, Bengal.

The number of Muhammadan students in the Calcutta Madrasa on the 31st March last was 957, of whom 40 were in the College Department, 322 in the Anglo-Persian Department, 222 in the Branch School, and 373 in the Arabic Department, including 163 students of the latter department who attend voluntary English classes. The accommodation provided for this large number of students has been for some years admittedly deficient, both in class rooms and in sleeping space for boarders. In May 1891, the Lieutenant-Governor sanctioned a grant for the construction of an upper story over the western wing of the Madrasa, in order to provide increased space for the Branch School; but it was ascertained on examination that the foundations were unable to bear the weight and the design was abandoned. Sanction had also been given in 1888 to hiring a separate house, at a rent of Rs. 150 a month, for those boarders who could not find proper accommodation in the Madrasa building.

2. It has long been Sir Charles Elliott's desire to build, with the assistance of private liberality, a separate boarding-house for the Madrasa. The present arrangements for lodging the students in the upper story of the Madrasa building are insufficient and most unsuitable. A separate boarding-house would not only provide the accommodation required for those students whose homes are outside Calcutta, but would also set free the upper part of the present building, now occupied by boarders, for a much-needed extension of the class room accommodation. In both ways, therefore, an end would be put to the present overcrowding of students. But while this project has long been recognized as desirable, it has hitherto languished for want of the necessary funds. The Government of Bengal has not been in a position to make any large grant from Provincial Revenues, and until that could be done, it appeared useless to appeal to private liberality.

3. Private effort, however, directed to the same end, has not been wanting. Fortified by the promise of Sir Charles Elliott that all sums contributed by private liberality would be met by an equal grant from the Government, an appeal setting forth the need of a Muhammadan hostel in Calcutta was circulated to the public early in 1893, by Dr. R. Hoernle, Principal of the Madrasa,

The Hon'ble Prince Sir Jahan  
Kadr Mirza Muhammed Wajid  
Ali Bahadur, K.C.I.E., of the Oudh  
family.

Nawab Abdul Latif Bahadur,

„ Saiyid Amir Husain,  
C.I.E.

Khan Bahadur Abdul Jabbar, C.I.E.

„ „ Mahomed Yusuf.

„ „ Surajul Islam.

associating with himself the gentlemen named in the margin. It was pointed out that Muhammadan parents living in the mufassal were often deterred from sending their children to Calcutta for education by the difficulty of finding suitable lodgings for them at a moderate cost, and proper supervision for them when lodged. Notwithstanding these grounds of apprehension, the influx of Muhammadan students to Calcutta was so large that the provision of

further accommodation had become a matter of pressing urgency. The gentlemen named had therefore formed themselves into a Committee for the purpose of collecting subscriptions to build a suitable house in the immediate neighbourhood of the Madrasa; and they appealed with confidence to the wealthy members of the Muhammadan community, as well as others, for funds to enable them to carry out that object. It was added that provision was required for 200 students, and that the approximate cost would be Rs. 70,000 for each 100 students. As experience showed that about one-half of the Muhammadan students coming to live in Calcutta were too poor to be able, without assistance, to defray the cost of their living, it was proposed to set apart a portion of the building for the purpose of providing free lodging for poor and meritorious students. It was also proposed that subscribers should enjoy, in proportion to the amount of their donations, certain privileges in respect of the nomination to free studentships, and in other ways.

4. The result of this appeal to private munificence has, on the whole, been satisfactory. In 1893 and 1894, a sum of Rs. 12,000 was realised from the gentlemen named below:—

	Rs.
Nawab Khwaja Ahsanullah Bahadur, C.I.E. ...	6,000
His Highness the Nawab Bahadur of Murshidabad, G.C.I.E. ...	2,500
His Highness the Nawab of Junagarh ...	1,500
Maulvi Ali Ahmad Sahib (for Mussamat Bibi Soghra) ...	1,000
Nawab Saiyid Vilayat Ali Khan, C.I.E. ...	500
The Muhammadan Literary Society of Calcutta ...	500
Total ...	<u>12,000</u>

Early in the year 1895, a contribution of Rs. 5,000 was promised, and has since been paid, to the Hostel Fund from the estate of the late Saiyid Basarat Ali Chaudhuri of Tippera. A further contribution of Rs. 2,000 has within the last few days been received from Haji Kasim Ariff of Calcutta. Both of these have been obtained through the influence of Mr. A. F. Abdur Rahman, who has taken great interest in the furtherance of the project. There is, therefore, for the furtherance of the present purpose, a sum of Rs. 19,000 already in hand; and there is reason to hope that liberal contributions will be obtained from other sources also. Sir Charles Elliott now finds himself in

a position to supplement the sums provided by private liberality by a considerable grant from Provincial Revenues. He has agreed to make a grant of Rs. 50,000 from this source in order that a beginning may be made at once with the boarding-house, and in the hope that further contributions may come in when it is seen that the project has been taken in hand.

5. Accordingly, a scheme has now been drawn up in the Public Works Department, under the Lieutenant-Governor's orders, for taking up a piece of land in the immediate neighbourhood of the Madrasa, to the north-east, and for building a boarding-house upon it. The boarding-house will be double-storied, in the form of three sides of a quadrangle, facing Wellesley Square to the south, and open to the north. It will be capable of extension to the north, and will be able to carry a third story if required. The portion now to be built is designed to accommodate 96 students, and also to provide quarters for a resident Superintendent and a medical officer, together with a library and reading-room. The estimate for the land amounts to Rs. 39,421, and for the building Rs. 60,321, or approximately a lakh of rupees in all. Of this amount the Government of Bengal is prepared to contribute one-half, in the hope that the other half will be contributed by the public. Should the financial position of the Government and the amount of private contributions justify, at some future time, the further extensions contemplated above, the building, when finally completed, is designed to accommodate 64 more students in the northern wing and 84 in the third story, or a total number of 244 students. This is about the number of students of the Madrasa whose homes are outside Calcutta; and if the full design is carried out, residence in the hostel will be made compulsory for all such students. The additional cost involved in these extensions will amount approximately to Rs. 82,000.

6. The Lieutenant-Governor expresses a confident hope that the commencement of this useful work, which is to be taken in hand at once, will elicit the promise of further contribution in aid of it from the Muhammadan community, and indeed from all who are interested in the progress of Muhammadan education. To students of that creed, resident in the mufassal, the Calcutta Madrasa offers exceptional advantages in the way of education. Hitherto the great drawback has been the absence of satisfactory supervision over the conduct and the general welfare of those of its students who come from a distance, and who have often been compelled, from poverty and other causes, to occupy indifferent lodgings amid questionable surroundings. The establishment of a spacious hostel, under adequate supervision and with every necessary arrangement for the health and comfort of the students, will relieve mufassal students from all these disadvantages, and will be of benefit alike to their studies, their health, and their character. It is not possible, nor even is it desirable, that the Government should undertake this duty unassisted. The matter is one which closely concerns the Muhammadan community and its future advancement, and Sir Charles Elliott cannot but feel confident that the efforts of Government on behalf of the younger members of that community will meet with a cordial and liberal response from its leaders.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

*Secretary to the Govt. of Bengal.*

## RESOLUTION ON THE REPORT OF THE HEALTH OFFICER OF THE PORT OF CALCUTTA FOR 1894.

No. 1154 Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

*Dated Calcutta, the 18th June 1895.*

### RESOLUTION.

READ—

Letters Nos. 2360, 2512 and 33T., dated 13th March, 23rd March, and 3rd May 1895, respectively, from the Sanitary Commissioner for Bengal, submitting the Report of the Health Officer of the Port of Calcutta for 1894.

This report, which was due to Government on the 1st March, was submitted by Dr. Rigby on the 4th February, without any mention of the Mecca pilgrim traffic, although special instructions had been given him to refer to this subject, and with a very inadequate account of the measures taken to protect the Port of Calcutta from infection by the plague prevalent in Hongkong. It was returned to have these deficiencies filled up, and has at last been received in a fairly complete form with the Sanitary Commissioner's letter of the 3rd May.

2. *Establishment.*—The duties of the Health Officer were performed by Surgeon-Major Macrae from 1st to 19th January, by Dr. Forsyth from 20th January to 3rd April, and by Dr. Rigby from 4th April to 31st August and from 1st October to 31st December. In the interval Dr. E. Dobson officiated. There was no change in the office establishment.

The new steam-launch *Relief* was completed and put into use from April.

3. *Inspections.*—The total number of vessels inspected was 1,589, against 1,465 in 1893. The total number of vessels which arrived in the port was 1,014, of which 800 were inspected during the year. There were 1,031 departures, of which 789 were inspected. The Health Officer explains that all the ships and steamers to or from foreign ports are inspected when they arrive at or leave the port. The steamers which make constant coasting voyages to Indian and Eastern ports are inspected as frequently as possible, but it is impossible to inspect all of them, both on arrival and departure, owing to their large number and frequent goings and comings.

4. *Ventilation of crews' quarters.*—The Health Officer reports that in many vessels improvements have been made in the ventilation of the fore-castle and in the provision of bath-rooms and latrines for sailors, and it is satisfactory to find that owners and agents are willing and anxious to do all in their power to assist and carry out all the suggestions made by him.

5. *Sickness and mortality among European seamen.*—The number of European seamen who arrived in the port during the year was 17,900, against 16,218 in 1893. The daily average number in port was 1,481, against 2,081 in 1893. The total number of admissions into hospital was 1,462; and the death-rate per mille was 16.20, against 13.93 in the previous year. Including the deaths out of hospital, the death-rate per mille during the year was 26.33, against 24.50, 15.47, and 35.7 in the three preceding years.

6. Of the admissions into hospital, 10 cases were due to cholera, 8 of which were fatal. There were 1 case of small-pox and 4 cases of sunstroke, with 1 death. Two convictions were obtained before the Chief Presidency Magistrate for breach of the port rules in working men exposed to the sun during prohibited hours. In 1893 there were four prosecutions with two convictions. There were 70 admissions from bowel-complaints, and this large number of cases is attributed to the habit among the seamen of purchasing bread and aerated waters of an inferior and impure character. The attention of the Chairman of the Corporation has been drawn to this, with a view to more careful examination of these articles by the Municipal Sanitary Inspector. There were 12 deaths from drowning, against 15 in 1893.

7. The following table shows the number of admissions to hospital from venereal diseases during 1894 and the previous 10 years:—

Year.	Admissions.	Admission rate per 1000.
1	2	3
1884	184	109.2
1885	170	100.4
1886	417	179.2
1887	228	120.4
1888	183	121.1
1889	186	114.3
1890	248	147.7
1891	185	129.7
1892	479	224.5
1893	386	185.4
1894	543	231.6

While the number of admissions was not so large as last year, the ratio is, however, higher.

8. *Sickness and mortality among the native floating population.*—There were in all 137 deaths in and out of hospital, against 72 in 1893 and 132 in 1892. The death-rate per mille is 5.34, and is considerably higher than the rate in 1892 and 1893. Of the total deaths, 35 were in hospital and 102 out of hospital. There were 83 deaths from cholera—23 in hospital and 60 out of hospital. There were 6 cases of scurvy, which has been ascribed to bad ventilation and feeding on unwholesome fish.

9. *Pilgrims.*—No vessels left the Port of Calcutta during the year with pilgrims for the Red Sea, but there were two arrivals during the year, viz., the S. S. *Jubeda* and S. S. *Sultan*. These vessels left Jedda with 1,341 passengers, and lost 20 before they reached Bombay: they brought 792 passengers on from Bombay to Calcutta, of whom 6 died on the way. None of these deaths were due to epidemic disease.

10. *Quarantine.*—Owing to an outbreak of bubonic plague at the ports of Hongkong and Canton, quarantine rules were put into force on all vessels arriving at Calcutta from these ports from the 1st July to the 17th September 1894.

During this period, 10 vessels arrived from Hongkong with a total of 556 passengers, and were detained at the Mateabrooj quarantine moorings. None of these vessels had any sickness on board, and as the voyage lasts from 15 to 17 days, there was little fear of latent infection being introduced by the passengers. The danger was confined to articles which might be conductors, and the holds together with mails, baggage, clothing and effects of the crews were thoroughly fumigated. The forecastles were also fumigated, washed with carbolic acid and repainted. The time the vessels were detained for fumigation ranged from 36 to 48 hours.

In regard to the value of these measures as far as plague is concerned, the Health Officer expresses a doubt if the apparatus used for the purpose of fumigation would be an efficient germ-destroyer if it existed in any of the imported articles, and he suggests that some permanent and effective arrangements should be undertaken to place the port under thorough protection from the importation of contagious and infectious diseases. This suggestion will receive the consideration of Government; but, whatever the decision arrived at, the Lieutenant-Governor cannot but express his satisfaction that the city of Calcutta escaped the dreaded disease which caused such heavy mortality at Hongkong.

11. The number of corpses found floating in the river was 79, the figures for the last four years being 72, 59, 105, and 60, respectively. The prevalence of this nuisance, both in Calcutta and in the province generally, has attracted the attention of Government, and a resolution has issued in the Judicial Department with the object of eliciting opinion in favour of drastic executive action for the prevention of the practice.

12. *Water-supply*.—Municipal filtered water was supplied to the shipping throughout the year, and no complaints were received regarding the supply, nor were any instances noticed of the water being polluted by the crew of the boat.

13. *Food*.—In six vessels portions of food for European seamen were found bad and condemned, and with one exception they were all changed. The one exception was the S.S. *Chancellor* which sailed without a food certificate, and it is therefore not known whether the condemned food was changed or not. There were numerous cases of inferior food for lascar crews. In every case the food was condemned and the certificate withheld until the new supply had been passed.

By order of the Lieutenant-Governor of Bengal,

A. D. McARTHUR, *Lieut.-Col., R.E.,*

*Offg. Secretary to the Govt. of Bengal.*

## WEATHER AND CROP REPORT.

*For the week ending the 24th June, 1895.*

**Burdwan.**—Rainfall at Burdwan 5·23. Regular monsoon weather. *Aus* rice is doing well. *Aman* rice is being sown. Common rice sells from 14 to 21 seers a rupee.

**Midnapore.**—Rainfall at Sadar 7·30. Weather cloudy. Paddy is being sown everywhere. Indigo, sugarcane and *til* (sesamum) are doing well. Tobacco and *jira* are growing badly. Fodder and water sufficient. Common rice selling at 16 to 20 seers a rupee.

**24-Parganas.**—Rainfall at Sadar 4·32. Weather seasonable. *Aus*, jute and sugarcane doing well. Ploughing going on for transplantation of *aman*. Condition of cattle good. Fodder and water sufficient. Rice sells at—

	Srs.	
Sadar	11 to 13	} per rupee.
Barasat	14	
Basirhat	19	
Diamond Harbour	15	

**Murshidabad.**—Recent rain has done much good to *bhadoi* paddy and jute plants. Indigo, sugarcane and mulberry are doing well. Fodder available. Common rice sells at 15 seers per rupee.

**Khulna.**—Rainfall at Khulna 4·61, Bagerhat 5·89, Satkhira 1·98. Weather cloudy and rainy. Preparation of lands for *aman* rice continues. Weeding of *aus* rice and jute going on. Prospects of crops good. Price of common rice 17 to 23 seers per rupee. Fodder and water sufficient.

**Dinajpur.**—Average rainfall 2·36. Weather hot and cloudy. Standing crops are good. Common rice sells at 15 seers a rupee. No outbreak of cattle-disease, nor any complaint for fodder or drinking water.

**Rangpur.**—Average rainfall 2·42. More rain wanted. Weather very hot. Harvesting of *aus* commenced. Prospects favourable. Supply of fodder sufficient. Rice selling from 10 to 15 seers per rupee.

**Pabna.**—Weather hot and cloudy. Rainfall 1·15. Standing crops benefited by the late showers. Price of common rice 16 seers per rupee at Pabna and 14 seers at Sirajganj. Fodder and water sufficient.

**Dacca.**—Rainfall 6·4. Weather hot with rain at intervals. Prospects of crops good. *Aus* is being harvested. Price of common rice 19 seers per rupee. No cattle-disease. Fodder plentiful.

**Chittagong.**—Rainfall 7·3. Weather hot. Ploughing and sowing in progress, but more rain wanted. Prospects of crops fair. Water and fodder sufficient. Prices steady.

**Patna.**—Rainfall 4·35. Transplantation of *marua* going on in Bihar subdivision. *Bhadoi* and paddy being sown all over the district. Common rice selling at 18 seers per rupee.

**Gaya.**—Monsoon broke on the 20th instant after unsettled weather. Rainfall at Sadar 2·05. *Marua* millet being transplanted and paddy sown. Prices about normal. Fodder and water sufficient.

**Champaran.**—Rainfall at Motihari 3·93. Sowing of *bhadoi* and *aghani* in progress. Fodder and water for cattle sufficient. Common rice sells at 15½ seers a rupee.

**Darbhanga.**—Rainfall 73. Weather hot and sultry. Rain badly wanted for *bhadoi* sowings. Fodder sufficient for cattle. Prices almost stationary.

**Bhagalpur.**—Monsoon weather. More or less rain all over the district. Sowing and ploughing in progress. Fodder and water sufficient. Common rice sells at 17 seers 10 chitaks per rupee.

**Purnea.**—Rainfall 64. The late rain has done much benefit to jute and to *bhadoi* and *aghani* crops. Transplantation of *aghani* has begun. Fodder and water sufficient. No cattle-disease. Price of common rice 16 to 20 seers a rupee.

**Cuttack.**—Rainfall 2·21. Weather stormy. *Beali* sown 12 annas and *sarad* 10 annas. Condition of cattle good. Fodder sufficient. Rice sells from 11 seers 13 chitaks to 26 seers 4 chitaks per rupee.

**Hazaribagh.**—Weather seasonable. Ploughing and sowing in vigorous progress. Prospects good. Sugarcane doing well. Fodder and water ample.

**General Summary.**—Monsoon conditions prevailed all over the province. In Burdwan, Midnapore, Cuttack, Patna and in the Central districts there was fairly heavy rain. Agricultural prospects are favourable, but in some districts more rain is required. Jute, early rice; indigo and sugarcane are doing well. The *bhadoi* crops and *aman* rice are being sown, and in some districts the transplanting of the seedlings has begun. No cattle-disease has been reported during the week. The price of common rice continues almost stationary.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,

The 25th June, 1895.

C. E. BUCKLAND, . .

Secretary to the Govt. of Bengal.

\* Mean for 6 days

Interpretation—Summary—The normal means of air pressure and temperature are the arithmetical average or means of the readings during the same period for the year. The humidity of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The mean at the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional stations for the period in question is the total rainfall in the district during the period divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 22nd of June 1895.

DISTRICT OBSERVATIONS.															DISTRICT.
Variation from normal mean.	Mean 8 A.M. temperature.	Average humidity at 8 A.M.	Average cloud amount at 8 A.M.	Rainfall of week at observing station.	OF WEEK.			RAINFALL.							
					Mean for district.	Normal mean.	Average number of rainy days.	Normal number of rainy days.	Since 1st of month.			Since 10th May 1895.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVA-  
TIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY,  
THE 22ND OF JUNE 1895.**

The week just past has been one of general rainfall over the whole province, but with this remark must be given an important qualification as regards distribution. Under ordinary conditions the moist current from the Bay is strongest in East and North Bengal, and a much greater amount of precipitation takes place in these parts than in the western districts. During the past week easterly winds have continued with little change across the north of the Bay, while the winds blowing across East and North Bengal are from Burma, where the air has been to a considerable extent deprived of its moisture. East Bengal has, in consequence, received less than half its normal amount, while in North Bengal the deficiency is not much under 2 inches. In the western and central districts, on the other hand, heavier rain than usual has fallen, the greatest difference being in Orissa, Chota Nagpur, and South-West Bengal.

The cause of this general rainfall has been, as is usual, during the monsoon season, a disturbance which originated in the south of the Bay, and which was beginning to be felt in the extreme south before the week began. The pressure distribution over Bengal and the west of the Bay was practically normal on the 18th, the first day of the week, but over the south of Burma and the east of the Bay, a considerable defect had developed. A strong westerly current was blowing across the south of the Bay, and the light winds which prevailed in the north were beginning to assume directions belonging to a cyclonic system. Fine weather then prevailed over the province, but local storms were of daily occurrence in all districts, and caused showers generally of short duration. On the 17th, pressure fell slowly except over the centre of the Bay, where the fall was at least brisk, as shown by the changes at the coast stations. The depression was better defined and the cyclonic circulation more regular, but winds were very light except in the south-west of the Bay. The series of thunderstorms, which continued, caused cool weather over the west of the province, especially in the west of Bihar. On the 18th, the centre of the depression was not far from the Orissa coast, and though changes of pressure were but slightly downwards over the west of the Bay, the disturbance had concentrated in consequence of a rise which had prevailed both to the north-west and south-east of it. This rise was rapid in the south of Burma and brisk in the west of Bihar. On the morning of the 19th, the centre of the depression was still to the east of the Orissa coast, but about noon it passed the coast between Puri and False Point. The fall of pressure continued slow in the north-west of the Bay. It rose rapidly, however, in Burma, and gradients were much steeper over the Bay. Strong winds developed and followed the depression into the north-west angle, while the steeper gradients over the province were attended by stronger easterly winds. General rain fell on this day, the heaviest being in Orissa, near the centre of the disturbance. After the centre crossed the coast, the depression soon filled up and weather moderated very quickly—a change which was probably to a great extent due to the recovery of pressure which followed the disappearance of another depression on the west coast of India. This rise of pressure extended eastwards over the whole of India.

The monsoon weather which the depression had produced over the whole of Bengal continued for some days, and was sustained in the south-west of the province by another but very shallow depression which appeared over the north of the Bay and South-West Bengal on the 21st. On that day there was a rapid rise of pressure in Orissa and Chota Nagpur, and a brisk fall over Assam and North Bengal. Probably it was owing to the irregularity of these changes that this shallow low pressure area formed, but it was attended by a cyclonic circulation of light winds and by heavy rainfall in South-West Bengal and the west of Chota Nagpur. On the 22nd the depression was moved to the north over part of South-West Bengal and part of Chota Nagpur, with a fairly regular circulation of light winds and rather heavy rain.

Meanwhile in North Bengal rainfall had to a large extent ceased, and in East Bengal, though it was general, amounts were very light. In the north of Bihar also, owing to the northerly winds, rainfall was becoming scattered.

*Pressure.*—During the early part of the week slow downward changes prevailed, and from the 18th there has been a fairly steady rise. Readings have never differed to any great extent from the normal, and the means for the week are nearly normal except in the south-western districts, where there is defect of from .02 inch to .05 inch.

*Temperature* has generally been above the normal by one or two degrees in the east of the province, and about the same amount below in the western districts. During the unsettled weather which attended the passage of the depression across Orissa, there was a large fall of temperature, chiefly in Orissa and part of South-West Bengal.

On the 21st mean defect in Chota Nagpur was about  $6^{\circ}$  and on the 22nd it varied from  $5^{\circ}$  to  $6^{\circ}$  in the south of Chota Nagpur and part of Orissa. The means for the week are above the normal in East and North Bengal and Assam by amounts varying from  $0^{\circ}7$  to  $2^{\circ}5$ , and below in the other districts by between  $1^{\circ}2$  and  $2^{\circ}6$ .

**Rainfall.**—As stated above, general rain has fallen throughout the week over the whole province, the falls being relatively heavier in the west than in the east of the province. The fall in Assam has been light, Dhubri receiving only 1·7, Silchar 2·3, and Sibsagar 3·3 inches. The average fall in North Bengal is 3·05 inches and in East Bengal 2·02 inches; as compared with normal falls of 4·72 and 4·34 inches respectively. In the other districts more than the normal amount has been received, in Orissa by 1·83 inches, Chota Nagpur 1·89 inch, South-West Bengal 1·67 inch, and Bihar 1·22 inch.

The following table gives the summary of the temperature and rainfall data of each of the six meteorological divisions of the province for the week ending Saturday, the 22nd of June 1895 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.

The mean pressure of the seven days ...

The average pressure of the corresponding period for 24 years, Surveyor-General's Office ...

The total number of hours of bright sunshine ...

The maximum possible number of hours of sunshine ...

The mean temperature of the seven days ...

The average temperature of the corresponding period for 24 years, Surveyor-General's Office ...

The extreme variation of temperature ...

The maximum temperature ...

The highest velocity of the wind in one hour ...

The mean relative humidity ...

The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office ...

The total fall of rain from 16th to 22nd June 1895 ...

The average fall of the corresponding period for 24 years, Surveyor-General's Office ...

The total fall from 1st January to 22nd June 1895 ...

The average fall of the corresponding period for 24 years, Surveyor-General's Office ...

The mean pressure, temperature, &amp;c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; <, lightning.

## IRRIGATION DEPARTMENT, BENGAL.
